DEPT.

IN THE SENATE OF THE UNITED STATES, *June 29, 1864.*

*Resolved,* That the report of the Secretary of the Treasury, communicating (in compliance with a resolution of the Senate of the 12th of March, 1863) a statistical and general report upon the value and condition of our foreign and domestic commerce, be printed; that five thousand additional copies be printed for the use of the Senate, and that two thousand five hundred additional copies be printed for the use of the Treasury Department.

# CONTENTS.

	Page.
Letter of the Secretary, transmitting the report, with description and classification of contents.....	1 to 3
<b>FOREIGN COMMERCE OF THE UNITED STATES—TONNAGE AND TRADE.....</b>	<b>5 to 117</b>
Introduction.....	5
American and foreign tonnage entered from foreign countries, 1789 to 1821, with the percentage of foreign.....	6
American and foreign tonnage entered from foreign countries, 1821 to 1863, with the percentage of foreign.....	7
Tonnage in Canadian trade distinguished.....	7
Countries, the tonnage from which are less in 1861 than in 1821.....	8
Countries, the imports from which, from 1828 to 1860, positively declined.....	8
Countries, the imports from which, from 1828 to 1860, relatively declined.....	9
Countries, the imports from which, from 1828 to 1863, positively and relatively declined.....	9
Values of imports into the United States in American and foreign vessels, 1821 to 1863.....	10
Values of exports, the produce of the United States, in American and foreign vessels, 1821 to 1863.....	10
Values of exports, the produce of the United States, in American and foreign vessels, for the quarter ending September 30, 1863.....	11
Values of exports, the produce of the United States, in American and foreign vessels, for the quarter ending December 31, 1863.....	11
Imports from foreign countries, in American and foreign vessels, 1862-'63, countries, and values.....	12
Tonnage, American and foreign, entering the ports of the United States, third and fourth quarters 1863.....	13
Comparison of results.....	14
History of the restrictive navigation laws of Europe, negotiation and countervailing acts of the United States.....	14
National character of tonnage entering the ports of the United States, 1829 to 1863.....	18
Comparison of American and British tonnage employed in the foreign trade of the United States, 1858 to 1863.....	18
<b>TONNAGE AND TRADE, IN FIVE-YEAR PERIODS, 1821 TO 1863.....</b>	<b>19 to 30</b> ✓
Tonnage entries of American and foreign vessels from all foreign countries, severally, every fifth year, 1821 to 1863, with the percentage of foreign.....	20
Tonnage entries from foreign ports, distinguishing the Canadian, every fifth year, 1821 to 1863, with the percentage of foreign.....	24
Tonnage entries for corresponding years, from European countries distinctively, with the percentage of foreign.....	25
Tonnage entries for corresponding years, from the West Indies, with the percentage of foreign.....	27
Tonnage entries for corresponding years, from Mexico and South America, with the percentage of foreign.....	27
Tonnage entries for corresponding years, from Asia, Africa, and miscellaneous places, with the percentage of foreign.....	27
Values of the imports and exports of the United States, with the percentage to and from each of the designated geographical divisions, every fifth year, from 1821 to 1863.....	28
European trade, distinguishing gold and silver, every fifth year, 1821 to 1863.....	28
West India trade, distinguishing gold and silver, every fifth year, 1821 to 1863.....	28
Detail of trade with the West Indies, for the year: 1860 and 1863.....	29
Canadian and British provincial trade, distinguishing gold and silver, every fifth year, 1821 to 1863.....	29
Mexican and South American trade, distinguishing gold and silver, every fifth year, 1821 to 1863.....	30
Asiatic, African and miscellaneous trade, distinguishing gold and silver, every fifth year, 1821 to 1863.....	30
Statement of vessels built in the United States, 1822 to 1863.....	30
American tonnage employed in foreign trade, coasting trade, fisheries, and steam navigation, respectively, from 1815 to 1863.....	31
<b>STATISTICS OF GENERAL TRADE WITH GREAT BRITAIN.....</b>	<b>32 to 55</b>
British statement of exports to the United States, 1857 to 1863.....	32
Flax and hemp imported into Great Britain, 1857 to 1862—tons and value.....	33
Exports from England of certain articles of foreign production, 1859 to 1863.....	34
Exports from England to the United States of certain articles of foreign production, 1860 and 1862.....	35
<b>CARRIAGE OF FOREIGN PRODUCE IN UNITED STATES VESSELS.....</b>	<b>35</b>
Articles of tropical or semi-tropical origin exported from the United States, 1824 to 1828.....	36
Articles of tropical or semi-tropical origin, exported from the United States, 1856 to 1863.....	37
<b>DIRECT TRADE WITH GREAT BRITAIN.....</b>	<b>37 to 55</b>
Imports and exports from and to the United States, 1856 to 1862, ( <i>British reports</i> ).....	37
Imports and exports to and from the United Kingdom, 1855-'56 to 1862-'63, ( <i>United States official returns</i> ).....	37
Imports and exports of the precious metals to and from the United States and Great Britain, respectively, 1856 to 1862, ( <i>British and American reports</i> ).....	38

Comparison of cotton receipts in England, for 1861, with the statistics of export from the United States for the same year.....	39
Monthly receipts of cotton in England, from the United States, 1859 to 1861.....	40
Exports from Great Britain to the United States compared with the official returns of imports into the United States from Great Britain.....	41
Explanation of the deficiency in the British account.....	41
Statement of exchanges between Great Britain and the United States for the seven years, 1856 to 1862, ( <i>British records</i> ).....	42
Quantities and values of leading articles imported into England from the United States, 1861, 1862, 1863.....	43
Imports from the United States into Great Britain for the seven years 1856 to 1862—quantities and values.....	44
Exports to the United States, the produce and manufacture of the United Kingdom, for the seven years 1856 to 1862—quantities and values.....	46
Exports to the United States of foreign and colonial produce and manufactures, for the seven years, 1856 to 1862—quantities and values.....	47
Exports to Great Britain, the produce of the United States, for the four fiscal years 1859-'60 to 1862-'63—quantities and values, ( <i>from U. S. official records</i> ).....	49
Values of articles the export of which increased from 1860 to 1863.....	51
The petroleum trade.....	51
<b>BRITISH TRADE WITH CALIFORNIA</b> .....	52
Imports into England, the produce of California, 1856 to 1862—quantities and values, ( <i>from British official returns</i> ).....	53
Exports to California, the produce and manufacture of the United Kingdom, 1856 to 1862—quantities and values, ( <i>from British official returns</i> ).....	54
Value of foreign and colonial produce exported from Great Britain to California, 1856 to 1862.....	55
<b>STEAM TONNAGE IN THE FOREIGN TRADE OF THE UNITED STATES</b> .....	55 to 78
Steam tonnage from foreign countries entered at Portland, Maine, 1855 to 1863.....	56
Steam tonnage from foreign countries entered at Philadelphia, 1851 to 1859.....	56
Steam tonnage from foreign countries entered at Boston, 1846 to 1863.....	57
American steam tonnage from foreign countries entered at the port of New York, 1848 to 1863.....	57
Foreign steam tonnage from foreign countries entered at the port of New York, 1844 to 1863.....	58
General aggregate of steam tonnage entering the ocean ports of the United States, 1844 to 1863.....	58
Actual steam tonnage arriving from foreign ports, 1844 to 1863.....	59
Steam tonnage entered at the port of San Francisco from foreign countries, 1853-'54 to 1862-'63.....	60
Steam tonnage entered the port of Charleston from foreign countries, 1851 to 1860.....	61
Steam tonnage entered at New Orleans from foreign countries, 1855 to 1860.....	61
Steam tonnage entered at Castine, Maine, from foreign countries, 1854-'55 to 1862-'63.....	61
Actual steam tonnage employed in the foreign trans-oceanic trade, 1859-'60.....	62
<b>THE ISTHMIAN TRADE</b> .....	62
Values of cargoes entering Panama, 1860-'62.....	62
Values of cargoes leaving Panama, 1860-'62.....	62
Number and tonnage of vessels entered at Panama for the year ending September 30, 1862.....	63
Travel and transportation over the Isthmus of Panama for the year ending September 30, 1862.....	63
<b>REVIEW OF STEAMSHIP LINES ENGAGED IN THE FOREIGN TRADE OF THE UNITED STATES, JANUARY, 1864</b> .....	64 to 72
<b>STEAM SHIPPING AND TONNAGE OF GREAT BRITAIN</b> .....	72 to 78
Summary of tonnage entering the ports of Great Britain from foreign countries, 1859 and 1863.....	72
Number, tonnage, and nationality of vessels entering the ports of the United Kingdom for five calendar years, 1859 to 1863.....	73
Number and tonnage of registered steam vessels under and over fifty tons, respectively, owned in England, 1860, 1861, 1862.....	74
Number and tonnage of registered steam vessels owned in England, employed in the home and foreign trade, respectively, 1830, 1861, 1862.....	74
Number and tonnage of steam vessels built in the United Kingdom, 1853 to 1862.....	75
Number, tonnage, and nationality of steam vessels entered and cleared at ports of the United Kingdom, 1860, 1861, 1862.....	75
Number, tonnage, and nationality of steam vessels entered and cleared at ports of the United Kingdom in 1853.....	76
Entries of steam vessels at ports of the United Kingdom from the United States, 1853, 1860, 1861, 1862.....	77
Steam vessels entered and cleared at British ports from and to American countries, 1853, 1860, 1861, 1862.....	78
<b>TRADE OF THE UNITED STATES WITH CANADA AND THE OTHER BRITISH NORTH AMERICAN PROVINCES</b> .....	78 to 117
Exports of Canadian produce through the United States to the other British North American provinces.....	79
Exports and imports of wheat and wheat flour to and from Canada, 1861, 1862.....	80
Exports to Canada of wheat, flour, Indian corn, and meal, during the fiscal years 1849 to 1863.....	81
Exports and imports of wheat and wheat flour to and from Canada, 1863.....	81
Exports to Canada, 1849 to 1863, (fiscal years).....	83
Exports to the other British North American provinces, 1849 to 1863, (fiscal years).....	83
Total exports and imports to and from Canada and the other British North American provinces, 1821 to 1863.....	83
Imports from Canada, 1850 to 1863.....	84
Imports from British North American provinces, 1850 to 1863.....	85
Total imports from Canada and the other British North American provinces, 1850 to 1863.....	85

General table of values of imports from Canada into the United States free of duty under the reciprocity treaty, for the half year to June 30, 1855, and the fiscal years 1855-'56 to 1862-'63.....	86
General table of imports from the British North American provinces, other than Canada, free of duty under the reciprocity treaty, 1855-'56 to 1862-'63.....	88
General table of imports from Canada into the United States paying duty, 1855-'56 to 1862-'63.....	90
Analysis of the general tables, averages of domestic exports to Canada.....	91
Averages of foreign exports to Canada.....	91
Table of aggregates paying duty in Canada, nine years.....	92
Table of aggregates paying duty in the United States, nine years.....	92
Table of values made free to Canada, by the reciprocity treaty, 1856 to 1863.....	93
Table of values made free to the United States, 1856 to 1863 .....	93
Canadian official tables, three years' exports to Canada.....	93
Statement of the value of the imports into Canada from the United States, 1850 to 1863, with the amount of duties paid.....	94
Statement of the value of the exports from Canada to the United States, and the total trade, 1851 to 1863.....	94
Imports into Canada from the United States, free of duty under the reciprocity treaty, 1855 to 1863.....	95
Exports to Canada, the produce and manufactures of the United States, 1860-'61 to 1862-'63.....	97
Imports from Canada into United States, free by ordinary laws, 1855-'56 to 1862-'63.....	99
Clearances and entrances from and into the lake ports of the United States and European ports, respectively.....	100
Movement of American produce in and through Canada.....	100
Value of transit trade through Canada <i>via</i> the St. Lawrence, to and from the United States.....	103
Value of imports from Canada passing through the United States under bond.....	103
Values of imports into Canada <i>via</i> the United States and the St. Lawrence, respectively, 1855 to 1863.....	104
Export of United States manufactures to Canada .....	104
Values of articles, the manufacture of the United States, exported to Canada, paying duty, 1858-'59 to 1862-'63.....	105
Exports of wheat, flour, corn, and meal, from the United States to the British North American provinces, other than Canada, 1849 to 1863—quantities and values.....	106
Produce of the United States passing through Canadian canals, the points of origin and destination distinguished, 1-61, 1862, and 1863.....	107
Transportation from American ports to Canada, up and down the St. Lawrence canals.....	109
Trade of the principal ports of the northern frontier with Canada, 1856 to 1863.....	110
Summaries of trade at the ports of the northern frontier, eastward and westward of Buffalo, respectively, 1853 to 1863.....	113
Canadian free ports.....	113
Imports at the port of Gaspé from countries other than Canada, 1861, 1862, and 1863.....	114
Exports from the port of Gaspé to British and foreign ports.....	114
Imports at Sault St. Marie from British and foreign ports, 1861, 1862, and 1863 .....	115
Exports from Sault St. Marie to British and foreign ports, 1861, 1862, and 1863 .....	115

# INTERNAL OR DOMESTIC COMMERCE BETWEEN THE MISSISSIPPI VALLEY AND THE ATLANTIC STATES.....

117 to 181

DATA—TREATMENT—GENERAL RESULTS.....	117 to 122
Definition of internal commerce.....	117
Total values exchanged.....	117
Internal commerce of Russia and United States, colonial trade of other nations.....	118
Statistics of domestic commerce, sources.....	119
Basis of calculation.....	119
East and west transportation, Mississippi river, and the coasting trade compared.....	119
Commerce by the grand thoroughfares traversing the meridian of the Alleghenies.....	120
Elements of Atlantic coasting trade.....	121
Market exchanges at the seaboard, Cincinnati, St. Louis, Chicago, Lake Superior, northwest of St. Paul, of the plains west of the Missouri river, and at New Orleans.....	121

# SPECIFIC CALCULATION OF THE EXCHANGES BETWEEN THE EAST AND THE WEST.....

122 to 181

WESTWARD FREIGHTS.....	122 to 135
Pennsylvania Central railroad, classification of tonnage.....	122
Westward freight through to Pittsburg.....	124
Way freight from Philadelphia.....	124
New York Central railroad, through tonnage.....	126
Way tonnage, total way and through.....	126
Erie railroad, through and way tonnage.....	127
Erie canal, to Buffalo and Oswego, tonnage and values.....	128
Erie canal, leading articles carried.....	129
Summary statement, tonnage and values transported westward by the five main lines.....	129
Population and consumption <i>per capita</i> , west of the Alleghenies.....	130
Erie canal, leading articles of freight to the western States in 1862.....	132
Erie and Champlain canals, westward freight, 1836 to 1862.....	133
Transportation tonnage westward from tide-water, on the New York canals, 1852 to 1862.....	133
Canadian canals, transportation westward through Welland canal, articles, tonnage, and destination, 1861-'62.....	134
EASTWARD FREIGHTS.....	135 to 170
Valuations assumed and summary of the four railroads and the Erie canal.....	136
Pennsylvania Central railroad, articles carried eastward, 1859 to 1863.....	138
Through from Pittsburg to Baltimore and Philadelphia.....	138
Way stations to Philadelphia.....	138
From Pittsburg to way stations.....	139
New York Central railroad, tonnage eastward, 1858 to 1863.....	140
Erie canal, tonnage to tide-water, produce of the western States and Canada, 1836 to 1862.....	141
Erie canal, way freights, produce of New York.....	141
Lake transportation eastward.....	142
Freight charge on wheat from Milwaukee and Chicago to Buffalo, from 1859 to 1863.....	142

	Page.
Lake trade, tonnage of United States vessels employed in, 1830 to 1863.....	143
Table showing the number, class, tonnage, and valuation of vessels, American and Canadian, engaged in the commerce of the lakes, 1856 to 1862.....	144
Tonnage of the lakes and the river St. Lawrence January 1, 1862 and 1863.....	145
Vessels owned at Buffalo, 1859 to 1862.....	145
Increase of the lake marine in 1862.....	145
Shipping of the por. of Milwaukee, 1862 and 1863.....	146
List of transportation lines on the lakes, 1863.....	146
<b>TABLES OF PRODUCE SENT EASTWARD FROM THE LAKE CITIES AND PORTS.....</b>	<b>147 to 158</b>
Flour and grain sent from Chicago in 1862, with destination.....	148
Aggregates of flour and grain sent from Chicago for nine years.....	148
Summary of quantities to Canadian ports in 1862.....	148
Cattle, meats, provisions, wool, &c., sent from Chicago in 1862.....	149
Estimated values of produce sent from Chicago in 1862.....	150
Produce sent eastward from Milwaukee, flour and grain, for ten years, 1854 to 1863.....	150
Summary of flour and grain from all ports of Lake Michigan in 1853.....	150
Provisions, wool, whiskey, &c., sent from Milwaukee in 1862, with valuation of all classes of produce.....	151
Total valuation of Lake Michigan exports, 1862.....	151
Eastward freights on Wisconsin railroads, 1863.....	151
Westward freights on Wisconsin railroads, 1863.....	152
<b>THE LAKE SUPERIOR TRADE:</b>	
Transit of vessels through the Sault Ste. Marie canal, monthly, for 1862.....	153 to 155
Value of outward shipments for 1862.....	153
Table of copper shipments, 1845 to 1862.....	154
Production and export of iron and iron ore, eight years.....	154
<b>THE LAKE FISHERIES.....</b>	<b>154, 155</b>
Table of receipts of lake fish at Buffalo, 1854 to 1862.....	155
<b>TRADE OF LAKE ERIE, EASTWARD.....</b>	<b>155 to 169</b>
Tables of receipts of produce at Toledo, by various railroads.....	155
Lines of transportation eastward from Toledo, and quantities shipped in 1862.....	156
Valuation of produce shipped from Toledo in 1862.....	157
Trade of Detroit, eastward—quantities for 1860 to 1862.....	157
Valuation of Detroit exports for 1862.....	158
Detail of receipts and exports of flour and grain, 1858 to 1863.....	158
<b>LAKE COMMERCE AT BUFFALO.....</b>	<b>159 to 169</b>
Receipts of flour and grain at Buffalo and all terminal lake ports for three years, 1850 to 1863.....	159
Summary of receipts at terminal lake ports for 1862.....	160
Summary of receipts at New York city, 1860 to 1862.....	161
Receipts of flour and grain at Buffalo from 1836 to 1862.....	161
Receipts and exports of provisions at Buffalo, 1849 to 1862.....	162
Receipts and exports of whiskey at Buffalo, 1850 to 1862.....	162
Lumber trade of the lakes—receipts and exports at Buffalo, 1846 to 1862.....	163
Receipts of live stock by lake at Buffalo, 1851 to 1862.....	164
Receipts and exports of hides and leather, 1852 to 1862.....	165
Receipts and exports of wool at Buffalo, 1856 to 1862.....	165
Receipts of lake and other freights via Port Sarnia, on the Buffalo and Lake Huron railway, 1862.....	166
Detail of receipts at Buffalo by lake and railway, 1862.....	167
<b>GENERAL EXCHANGES, EASTWARD AND WESTWARD, AT BUFFALO.....</b>	<b>168 to 172</b>
Eastward freights by canal from Buffalo, 1854 to 1862.....	169
Receipts of westward freights at Buffalo, by canal, 1854 to 1862.....	169
Detail of exports eastward, by canal, 1860 to 1862.....	170
Detail of receipts at Buffalo, by canal, 1860 to 1862.....	172
Comparison of grain and flour receipts of 1863 with 1862.....	172
<b>LAKE TRADE AT TORONTO, CANADA: Exports of flour and grain, 1858 to 1862, with destination.....</b>	<b>173</b>
<b>PRODUCE AND GRAIN TRADE OF MONTREAL, CANADA.....</b>	<b>174</b>
Receipts and shipments at Montreal, 1861 to 1863.....	175
<b>PRODUCE AND GRAIN TRADE OF OSWEGO, 1862 and 1863.....</b>	<b>175</b>
<b>SUMMARY OF THE GENERAL MOVEMENT EASTWARD IN FLOUR AND GRAIN.....</b>	<b>176, 177</b>
Per cent. of receipts at the principal receiving points, 1857 to 1862, including the foregoing eastward movement.....	178
Variations in the eastward movement, 1856 to 1862.....	178
<b>GENERAL TABLES OF THE TONNAGE AND TRANSPORTATION OF THE ERIE CANAL.....</b>	<b>179 to 181</b>
Capacity, passages, and aggregate carriage of Erie canal boats eastward.....	179
Quantities of flour, distinguishing western and New York, reaching tide-water through the Erie canal.....	179
Tonnage of wheat and flour eastward to the Hudson river on the Erie canal, points of shipment, and total value.....	180
Tonnage and value of merchandise going to other States by way of Buffalo and Oswego, in each year, 1836 to 1862.....	180
Estimated value of property coming from, and merchandise going to, other States than New York by way of Buffalo, Black Rock, Tonawanda, and Oswego, 1836 to 1862.....	181

	Pago.
COMMERCE OF THE PACIFIC COAST.....	182 to 200
1. The Australian colonies of England.....	182 ✓
2. The Pacific States and Territories of the United States.....	186
3. The English colonies of Vancouver's island and British Columbia.....	192
4. Russia in America and Asia.....	195
5. The Sandwich Islands.....	196
6. The gold product of the Pacific coast.....	197

§ 3- A statistical map prepared in the Treasury Department to illustrate the text of the report, showing the boundaries of the new Territories at the date of the latest congressional legislation; the railroad communications in operation, in progress, intended, and in prospect between the Atlantic, Mississippi, interior, and Pacific States; the boundaries of the arable districts of British North America upon the northwestern frontier of the United States; the population of all the States and Territories according to the census of 1860, with estimates for the new Territories at later dates; the areas of all the States and Territories furnished by the government Land Office; and the several sites of the gold and silver mines known and worked in the Rocky mountains.

REPORT  
OF  
THE SECRETARY OF THE TREASURY,  
COMMUNICATING,

*In compliance with a resolution of the Senate of the 12th of March, 1863, a statistical and general report upon the value and present condition of our foreign and domestic commerce.*

TREASURY DEPARTMENT, *June 25, 1864.*

SIR : The following resolution was adopted by the Senate of the United States on the 12th March, 1863 :

*“Resolved, That the Secretary of the Treasury be directed to have prepared and presented to the Senate a statistical and general report upon the value and present condition of our foreign and domestic commerce, including as well that of the Pacific coast ; and, further, to suggest what legislation, if any, is necessary to protect the important interests involved.”*

In response to this resolution, the Secretary has caused to be prepared, and has the honor herewith to transmit, a series of statements covering the wide range of inquiry contemplated by the call of the Senate, as completely as the accessible sources of information have enabled him to do.

The contents of this report may be generally described and classified as follows :

*First.* A historical and analytic review of the foreign commerce of the United States from the beginning of the government.

*Second.* An exhibit of the existing internal commerce between the Atlantic and Mississippi States.

*Third.* The overland trade and communications with the Pacific States.

*Fourth.* The foreign commerce of the Pacific coast.

*Fifth.* The international relations of the northern frontier of the United States with British and Russian America.

The first of these general divisions embraces a statement of the tonnage employed and the values exchanged in our foreign commerce generally, with the varying proportions of foreign and American tonnage. It exhibits a general view, historical and statistical, of the carrying trade of our international exchanges, distinguishing the trans-oceanic tonnage from that employed in trade with the British possessions in North America ; the course of the carrying trade in the great geographical divisions of our foreign commerce ; its increase and decrease with the principal foreign countries ; the total value of the exchanges ; the international movement of the precious metals ; and the periodic

changes in the relative value of the imports from and the exports to the several customer countries ; to which is added the number, class, and tonnage of vessels built in each year from 1822 to 1863, with the tonnage employed in the coasting trade, the whale, cod, and mackerel fisheries, respectively.

The trade and navigation of the United States with Great Britain, compiled from the official reports of both countries, are given in general, and in sufficient detail to exhibit the extent and fluctuations of this branch of our commerce, the leading articles exchanged in direct and indirect trade, and the direct exchange of commodities, other than the precious metals, between Great Britain and California.

The trade of the United States with Canada and the other British North American provinces is also specially presented, on the authority of both our own and Canadian official reports, showing the extent and character of the exchanges, the kind and value of the transit trade of the eastern and western States through Canada and the St. Lawrence to the ocean.

A general exhibit is made of the steam tonnage engaged in our foreign commerce, and of the Panama Isthmus trade, vessels and cargoes, with a comparative view of the steam shipping and tonnage of Great Britain, and a statement of the steam vessels engaged in American trade entered and cleared in British ports.

The second division of the report, occupied with domestic commerce between the Atlantic and Mississippi States, embraces the quantities and values transported east and west by the great railways of the United States, by the lakes, and by the Welland, Erie, and Champlain canals, and the kind and extent of the shipping of the lakes. The tonnage was obtained from the reports of State commissioners of statistics, boards of trade of the principal cities, transportation companies, and other authoritative sources, and the values estimated by accepted commercial rules.

The interruption of trade between the loyal and disloyal States of the Union, the suspension of the Mississippi river trade, and the non-intercourse of the northern with southern States since the commencement of the rebellion, have rendered the statistics of this large branch of domestic commerce unattainable. The existing records of previous years are known to be both incomplete and unreliable, and no exhibit of it has therefore been attempted in this report.

It will be observed that the data used in exhibiting the east and west trade of the States and Territories relate mainly to the calendar year 1862, which is chosen because in that year its limits were well defined and its character well settled and ascertained.

The third, fourth, and fifth general divisions exhibit the trade of the Pacific coast ; its commercial relations with Asia ; the movement of the precious metals to India and China ; statistics of the population, of mining, of agricultural productions, and of transportation in Nevada, Utah, Colorado, and Kansas, in reference to the construction and support of the Union Pacific railroad ; the like statistics of Arizona, New Mexico, western Texas, and Neosho, bearing prospectively upon a railroad from the States of the lower Mississippi to the Gulf of California ; similar statistics of Idaho, Montana, and Dakota, with

reference to overland communication between the great lakes and the Columbia river; the situation and prospects of an international route, passing through the northwestern States to the Pacific coast, in British Columbia; the progress of population, mineral wealth, and other material interests anticipated within the present century, in the several belts of interior States traversed by these overland routes to the Pacific ocean; and the condition and prospects of the mining interests of the basin of Lake Superior.

In reference to the existing necessity for the exhibit of our foreign commerce contemplated by the resolution of the Senate, the Secretary begs leave to say that hereafter the requirement, he believes, will be fully met by certain reforms in the annual report of commerce and navigation adopted by the department in the report for 1862-'63, as will be seen by the volume now in type and about to be issued.

The statistics of the internal commerce of the country in the present condition of our national statistics must be gathered from sources that hold no official relations with the Treasury Department; but a knowledge of them has always been required for public and private uses, and in the new condition of our domestic affairs has become more than ever important and necessary to the government and the people. A contribution to the fund of information demanded—believed to be valuable—was prepared in the Treasury Department and published with the finance report of 1863, giving the range of prices of staple articles in the New York market at the beginning of each month of every year from 1825 to 1863. The labor and research bestowed upon the inquiry, the results of which are embodied in the papers now transmitted, will, at least, manifest an earnest endeavor to supply the required information, and the report is submitted as a step towards the more perfect execution of such a work.

The Secretary is not prepared at present to express an opinion in regard to the legislation necessary to protect the important interests to which the Senate's resolution relates. The facts exhibited in the report will doubtless indicate to the wisdom of Congress what measures will best accomplish that end. It is proper to add that the papers now submitted have been prepared under the direction of the Secretary by Messrs. William Elder, James W. Taylor, and Lorin Blodget, gentlemen whose known capacity for intelligent and accurate research and correct appreciation of results supplies a just ground for confidence in their statements and inferences.

With great respect,

S. P. CHASE,

*Secretary of the Treasury.*

Hon. HANNIBAL HAMLIN,

*President of the Senate of the United States.*

# FOREIGN COMMERCE OF THE UNITED STATES.

---

## TONNAGE AND TRADE.

The foreign commerce of the United States has undergone changes within the last forty years, in value, geographic distribution, and agencies employed, which are not indicated by the ordinary official publications with the clearness and force required for the direction of legislation concerning it. The resolution of the Senate recognizes these deficiencies, and is understood to authorize whatever range of inquiry may be demanded for a better exhibition and explication of the history and present condition of our international trade.

The United States began an extraordinarily extended and unusually successful commercial career very soon after the establishment of the government. The condition of Europe for a long period was such that American shipping became of necessity the preferred channel for conducting far the larger share of the commerce of the world. We were not limited to the carriage of merchandise of American production abroad and the return of foreign articles required in our own consumption, but for a series of years entered at, and again exported from our ports, a larger aggregate of values on account of foreign nations than for the entire use of the United States.

It could not, of course, be expected that with the most rapid and successful development of the United States this ascendancy in general commerce would be maintained, but the facilities obtained by a preoccupation of extensive and profitable lines of trade between countries possessing no commercial marine directly, and also between these and the commercial and manufacturing states which are their permanent natural markets, should have secured to the shipping of the United States an equal division of all trade between non-commercial states and a share of the carrying trade wherever exclusion by positive legislation does not exist. Still more decidedly should the control of all carrying trade to our own markets have been retained, and the increased consumption of the products of tropical countries necessarily attending on the growth and increasing wealth of the United States, might reasonably be supposed to give employment almost exclusively to American shipping. Crude products of the United States exported, and crude products of tropical latitudes imported for consumption here, constitute a permanent trade which need not pass from American hands.

The statistics of shipping and tonnage, distinguishing the proportions of American and foreign, employed in the commerce of the United States, are the readiest and most directly available guide to the general course of trade from the beginning. Previous to 1821 the statements are designated the "tonnage engaged in the foreign trade," and subsequent to 1821 "the tonnage entered and cleared at all the ports" are the specific statements given. It is probable that the first designation is so nearly identical with the second that no modification of either is necessary in making a continuous comparison, but as a division is required for convenience simply, the first of the following tables bring

the series of years down to 1821, of "tonnage engaged in the foreign trade;" and the second gives the tonnage of vessels entered the several ports of the United States for each year of the period following, to 1863.

The large values of foreign merchandise exported from the United States, which are given in detail in another place, necessarily imply the employment of a great amount of American tonnage, since very little of the carrying trade between neutral nations could be in the hands of any belligerent power, and nearly all Europe was long involved in war. Even after the peace of 1815 there were intervals of disturbance, and frequent occasions in which the carrying trade was largely resumed by our shipping. The magnitude of the interest we had in certain years is striking. Beginning at 605,513 tons, in 1790, the tonnage in foreign trade rose to 1,106,572 tons in 1801, and to 1,203,021 tons in 1807, of which but seven per cent. was foreign in the last-named year. The proportions of foreign tonnage to the total engaged in foreign trade for the average of periods of five years, from 1789 to 1821, is as follows: 1789 to 1793, 37.1 per cent.; 1794 to 1798, 10.6 per cent.; 1799 to 1803, 15.6 per cent.; 1804 to 1808, 8.9 per cent.; 1809 to 1813, 9.9 per cent.; 1814 to 1818, 22.1 per cent.; 1819 to 1821, 9.5 per cent.

As a rule, the proportion of American tonnage increased directly with the absolute amount employed. In the two years of least trade, 1789 and 1814, nearly half the tonnage was foreign. In 1811, with nearly 1,000,000 tons engaged, but 3.3 per cent. was foreign; an exceptional state of affairs due to the violence of the European wars then waged. The following is the detail of each description of tonnage employed in the foreign commerce of the United States for each year, from 1789 to 1821, with the calculated proportion of foreign:

*American and foreign tonnage engaged in the foreign trade of the United States, 1789 to 1821.*

Years.	American, tons.	Foreign, tons.	Total, tons.	Per-centage of foreign.	Years.	American, tons.	Foreign, tons.	Total, tons.	Per-centage of foreign.

1805.....	922,298	87,842	1,010,140	8.6					

*Averages of five-year periods.*

1789 to 1793...	341,638	201,158	542,796	37.06	1809 to 1813...	673,652	74,729	748,381	9.9
1794 to 1798...	582,259	69,433	651,692	10.6	1814 to 1818...	634,597	179,603	814,200	22.06
1799 to 1803...	748,648	139,088	887,746	15.6	1819 to 1821...	784,638	82,558	867,196	9.5
1804 to 1808...	888,651	87,104	975,755	8.9					

In the next series of years, or from 1821 to 1837, the rapid increase of foreign tonnage is apparent, commencing most decidedly in 1831 and 1832. After this date, notwithstanding the aggregate increase is four-fold in 1849 and seven-fold

in 1863, as compared with the average of 1820 to 1830, the proportion of foreign maintains its position at 36 to 40 per cent of the whole. In the tables as they stand a large aggregate of tonnage entering from Canada is included in the American, which is, to a considerable extent, mere ferry tonnage, and should be excluded from the comparison. The average to be so excluded would be 250,000 tons annually for five years previous to 1859, and 500,000 to 600,000 tons for each year from 1859 to 1863, inclusive.

During this period of forty-two years there was no marked event in the history of the United States to affect the progressive advance in general trade. It is evident, however, that, not only was the foreign carrying trade steadily passing from our shipping to other hands, but also the direct commerce of the United States with all other countries was steadily encroached upon, each year adding a greater number of foreign than of American vessels to the general commercial marine. At the date of the introduction of steam in transatlantic commerce the accession of foreign tonnage was more marked than at any other time subsequent to 1832; and correcting the account to transatlantic commerce distinctively, by throwing out the trade with the Canadian border, the proportion of foreign becomes greater.

*Aggregate of tonnage entering the ports of the United States from foreign countries, 1821 to 1863, with the proportion of foreign.*

1841 .....	1,631,909	736,414	2,368,353	31.1	1863 .....	4,614,698	2,640,378	7,255,076	36.4
1842 .....	1,510,111	732,775	2,242,886	32.6					

In 1862 and 1863 the tonnage entered from Canada amounted to totals quite disproportionate to the commerce, it being :

	American.	Foreign.
1862.....	2,487,373	683,411
1863.....	2,307,233	743,136

Excluding this, much of which was steam ferry tonnage, the proportion of foreign shipping in the foreign trade of the United States in the fiscal year 1862-'63 was 45.1 per cent. of the whole:—Tonnage in foreign trade, 1862-'63, American, 2,307,465 tons; foreign, 1,897,242 tons.

\* A deduction of at least 600,000 tons from American tonnage should be made on this and each following year for the duplicated tonnage of steam ferry-boats at Buffalo chiefly, and in less degree at Ogdensburg and Cape Vincent.

During the fiscal year current, 1863-'64, the reduction of American tonnage has been greatly accelerated from extraordinary and unusual causes, until the direct foreign trade conducted in American bottoms has been almost annihilated.

In the preceding statements it has been the purpose to show the normal course of trade in periods of peace, and to prepare matter for a fair judgment of the state of affairs and the tendencies of trade abroad anterior to the war. It cannot be doubted that there was a serious decline of the foreign trade properly belonging to the United States dating back at least to 1832, and a change in progress, which is more fully disclosed by the statistics giving the values of imports and exports.

The following named countries sent us absolutely less tonnage, both American and foreign, in the year 1861 than in 1821, forty years previous:

	1821.	1861.
Russia.....tons..	13,827	12,157
Prussia.....tons..	726	400
Swedish West Indies.....tons..	13,946	1,684
Sweden and Norway.....tons..	13,381	13,330
Danish West Indies.....tons..	41,096	14,919
Gibraltar and Malta.....tons..	11,666	2,770
French West Indies.....tons..	41,729	2,616
Canary islands.....tons..	2,329	2,012
Portugal.....tons..	20,693	7,417
Honduras and Campeachy.....tons..	5,357	3,849
Hayti.....tons..	50,119	39,640
Madeira islands.....tons..	4,288	1,135
Cape Verde islands.....tons..	5,038	2,360

These are comparatively unimportant countries, however, and the diversion of trade from direct channels is not so clearly shown by details of tonnage as by actual imports of merchandise. For the purpose of this comparison of values, two years better representing the periods may perhaps be selected—1828 and 1860—in both of which trade was healthy and importations full, but not excessive. No disturbance of the usual condition of any considerable foreign country existed in either year which could of itself divert trade from its accustomed channels. The total imports in 1828 were \$88,509,824, and in 1860 \$362,163,941. The re-exports were \$21,595,000 in the first-named year, and \$26,933,000 in the last named. The following table classifies the details from each country, showing which have increased and which have declined, both positively and relatively:

*Countries from which the imports to the United States have positively declined from 1828 to 1860.*

Imports from—	In 1828.	In 1860.	Imports from—	In 1828.	In 1860.

Spain on Mediterranean.....	421,476	2,395,457			

The proportions of general increase were a little more than four in 1860 to one in 1828, both being above the average of the general series, and representing two conspicuous points of full and legitimate trade.

The countries from which importations have either positively or relatively declined, are generally those which produce and export crude articles, the exceptions being the countries producing sugar, coffee, and tea. The produce of these last has been immensely stimulated by the growth of population in the United States and the ease of living, and consequent changed habits of the people. This maintains a demand so large that the carriage of supplies is not so easily diverted as in case of crude articles which are the elements of manufacture. It is these last which we are losing chiefly, and of which the loss is important for other reasons than the mere profit of the carrying trade.

It must be observed that these statements refer only to the direct trade from the countries named, and include none of the importations of their products which reach us through other channels. A large and steadily increasing volume of such indirect trade has long existed. The products of Russia reach the United States by way of England and the German states, as do those of Sweden and Norway. Indeed, the tropical products and special exports of the entire list of countries with which our direct connexion appears to have declined, are now brought through the channels named in large proportions, as will be shown by the statements of imports which follow.

As the proportion of foreign shipping engaged in the foreign trade of the United States, is believed to be directly associated with the limitation of our commerce, both direct and indirect, with the greater number of foreign countries, the statements bearing on both points have been introduced indiscriminately. The following summary of the values imported annually by each class of vessels is the natural successor of the detailed comparison of values from each country for 1828 and 1860. The imports have so far been taken as the best illustration of the relations held by the United States to foreign countries, because they

were made the basis of a large carrying trade, supplying other countries with merchandise not of our own production, and therefore not permanently within our control. In continuation, the condition of our export trade will be stated, showing to what extent that has undergone modifications similar to those apparent in the import trade.

*Value of imports of the United States in American and foreign vessels, 1821 to 1863.*

In regard to the carriage of these exports, the above tables disclose some remarkable facts. Beginning with a proportion averaging less than one-fifth in foreign vessels for the first ten or twelve years, the proportion in 1862-'63 is three-fifths, and for the two remaining quarters, closing the calendar year 1863, the proportion is four-fifths of the whole carried in foreign vessels, and but one-fifth in American; thus precisely reversing the relations of the two classes existing in 1821, and, indeed, continuing to exist to 1831.

But it is important to separate the unusual state of affairs resulting from the war, from the course of events preceding it, and to distinguish the changes then attained, in order to decide upon all the questions involved. Taking the year 1860 as a fair representative of this previous period, the proportion of the total exports which was carried in foreign vessels was 29.6 per cent., and of the five years closing with 1860, 29.5 per cent. For the first five years of the table, 1821 to 1825, the proportion was but 16.6 per cent. carried in foreign vessels.

The change, therefore, is only in part due to the dangers at present incurred by American shipping. Not only are the absolute values large which fell to the hands of foreign carriers previous to 1861, but the proportions are doubled over those existing in the period first stated in the above tables. Taking the comparison further back the disproportion is greater, large encroachments having been established even in 1821 upon the business of American shipping in the carriage of domestic produce to foreign markets.

The imports exhibit a similar course of change from American to foreign hands. The average of the first five years was \$5,300,000 in foreign vessels, out of a total of \$80,000,000, only 6.6 per cent. In 1832 they had risen to 10 per cent. of the total; in 1848 and 1849 to an average of 20 per cent.; in 1853 to 30 per cent.; and in 1859 and 1860 to 40 per cent. In the fiscal year 1861-'62 they exceeded the total in American vessels by twenty millions of dollars, and in 1862-'63 by thirty-four millions of dollars. In the last six months of the calendar year 1863 they were nearly three times the imports in American vessels, being as follows:

	In American vessels.	In foreign vessels
Quarter ending September 30, 1863.....	\$19, 033, 949	\$46, 114, 529
Quarter ending December 31, 1863.....	18, 935, 399	56, 551, 754
Six months.....	37, 969, 348	102, 666, 283

The proportions at New York, the chief port of entry, for these two quarters were—

	In American vessels.	In foreign vessels.
Quarter ending September 30.....	7, 829, 110	38, 210, 593
Quarter ending December 31 .....	5, 994, 785	43, 321, 712

It may be stated that the loss of the great carrying trade conducted by American shipping during the European wars has more than once received earnest public attention. Two or three European States, and particularly France, almost immediately on the establishment of peace, built up a severe system of discriminations against all other shipping than their own. These discriminations were carried to a most injurious length, and were the subject of earnest remonstrance. The effect of the action of France is still seen in the remarkably limited amount of our present direct trade with that country, and for other states the results are quite as striking. In a forcible memorial addressed to Congress by the Chamber of Commerce of New York in 1821, the first decisively adverse effects of the new policy of European states is thus stated:

"It is a lamentable fact that more than half the number of vessels lately arrived at this from foreign ports are dismantled, from the absolute absence of any advantageous object of commercial pursuit; and this state of commerce

seems the natural and necessary result of the new order of things which has prevailed since the pacification of Europe. Every restraint that lately shackled the navigation of the principal maritime nations of Europe has been removed, whilst the general trade and navigation of those states are, at the same time, regulated with a studious regard to the interests of their own subjects, so that the United States have not only ceased to be the carriers for Europe, but are deprived of the means of entering into a fair competition in the transportation to foreign countries of the principal products of their own soil."

This is a just statement of the adverse action of France, more particularly, by which the United States shipping was first seriously curtailed of its due share of foreign trade. The discriminations then made by France were not in the form of tonnage dues and port charges so much as in specific charges imposed upon American produce imported in American ships, which charges are stated in this memorial to be as follows:

"The foreign or discriminating duties paid by American vessels importing the following articles into France are:  $1\frac{1}{2}$  cent per pound (French) on cotton;  $1\frac{1}{2}$  cent per pound on tobacco; 55 cents per 100 pounds on potashes; which extra duties exceed the whole freight now paid for the transportation of those articles from the United States, whether in French or in American bottoms. To form an estimate of the practical result of these regulations it will be assumed that a vessel of 300 tons register will carry 560,000 pounds weight of tobacco, the difference of duty on which, at  $1\frac{1}{2}$  cent per pound, would be \$6,300, equivalent to *twenty-one* dollars per registered ton; or, in a vessel of the same description carrying 280,000 pounds of cotton and 220,000 of potashes, the difference of duty at  $1\frac{1}{2}$  cent for the cotton is \$4,200, and at 55 cents per 100 pounds on the ashes, is \$1,200—together, \$5,400—which is equivalent to *eighteen* dollars per registered ton.

"The aggregate tonnage employed in the direct trade to France is estimated at 50,000 tons, in addition to which an indirect trade of considerable extent has been carried on by the circuitous channel of England, the saving in the duties by reshipping our cotton and tobacco thence to France in French vessels, instead of shipping them direct from the United States in American vessels, being more than equivalent to the extra freight and charges attending the additional voyage."

This apparently remote action is here cited because it was one of the events marking the beginning of a system of diversion of our own commerce from direct lines, which has continued to increase to the present time. The export of American produce passes through foreign distributing markets to a great extent, as will be subsequently shown, and the importation of the produce of tropical and non-commercial countries also comes to us at the hands of foreign carriers, and through foreign distributing markets.

The action of the British government in the same direction was even more frequent and persistent, and though interrupted or in other ways rendered nugatory previous to the peace of 1815, the purpose was frequently and distinctly declared. In January, 1791, the British Board of Trade, in a formal report on commercial relations with the United States, announced the policy of giving signal privileges in British home ports to American ships, but refusing all such equality in the ports of the colonies.

"If Congress should propose that this principle of equality should be extended to the ports of our colonies and islands, and that the ships of the United States should be there treated as British ships, it should be answered that this demand cannot be admitted even as a subject of negotiation."

"Many vessels now go from the ports of Great Britain carrying British manufactures to the United States; there load with lumber and provisions for the British islands, and return with the produce of those islands to Great Britain. This whole branch of the trade may be regarded as a new acquisition, and was attained by your Majesty's orders in council before mentioned; which has operated to the increase of British navigation compared with the United States in a double ratio, but (since) it has taken from the United States more than it has added to Great Britain."

Various countervailing acts of the United States aided to neutralize this policy, as has been said, until after the general peace of Europe in 1815. In a commercial convention with England, concluded July 3, 1815, the United States conceded the chief point in controversy, trusting to the great development of our trade with the British colonies, and the energy with which it had been conducted, to maintain it under any circumstances. The United States agreed to the equalization of all the conditions of their commerce with the British European ports, but left the regulations controlling trade with the British West Indies and American colonies without stipulation. The consequences were soon felt. The British authorities re-established their old colonial policy and shut American shipping from the West Indian ports. Vigorous remonstrances were made, and in 1818 Congress enacted that the United States should thereafter be closed against British vessels coming from any British colony or territory that was closed against American vessels by any trade regulation. Again, in May, 1820, Congress further prohibited a circuitous trade that had grown up in evasion of the first act, bringing West India produce through Nova Scotia and Canada. The distress caused in the West Indies by these acts compelled the British Parliament to relax the policy which originated them, and for several years following an imperfect and variable succession of attempts to equalize the trade followed, the general policy of which was to preserve a fair share of it to the United States.

In 1830 the British gained an important advantage, however, by the construction placed on an act of Congress of May 20 of that year. It was claimed by the British and colonial organs that they could take, under this new order, the larger share of the carrying trade in American products away from us, and it is evident from the table of exports of domestic produce previously given that they did so. From 1830 to 1833 the exports in American vessels did not increase at all, while those in foreign vessels doubled.

Year.	In American vessels.	In foreign vessels.	Year.	In American vessels.	In foreign vessels.
1830.....	\$51, 106, 190	\$8, 355, 839	1832.....	\$46, 925, 890	\$16, 211, 580
1831.....	49, 671, 239	11, 605, 818	1833.....	52, 985, 446	17, 332, 252

The increase of British tonnage in the American trade, resulting from this action, is shown in the tonnage entering the United States from the British West Indies and the provinces for the same years :

*Tonnage from West Indies and British Provinces.*

Year.	Tonnage from West Indies.		Tonnage from British provinces.	
	American.	British.	American.	British.
1830.....	22,428	182	130,527	4,002
1831.....	33,046	23,760	92,672	82,557

1834.....	37,081	18,008	173,278	239,984

## Total British tonnage entering United States ports :

1829.....	86,377
1830.....	89,823
1831.....	211,270
1832.....	288,811
1833.....	383,487
1834.....	453,495
1835.....	529,922

Of the result of this change, Pitkin states that it gave to foreign carriers the first decided possession of the carrying trade in American staples. "This great increase in British shipping has been occasioned principally by the circuitous trade, so long the favorite object of British statesmen, and which the American government at last voluntarily yielded. This has thrown into the hands of the British a much greater proportion of the carrying trade of the United States, both in domestic and foreign articles, than they have ever before enjoyed, except at the commencement of the general government. \* \* \* \* The circuitous trade thus yielded to the British has given them the carriage of no small proportion of the bulky articles of the south, particularly cotton."

This was written in 1835, and it is evident that the point then made of the introduction of a large proportion of foreign shipping into the trade of the United States deserved all the attention it received. From that time forward no decided acts of either government appear to have modified the course of events. Great Britain relaxed the navigation laws at home in 1854, and by so much favored the employment of American shipping in the trade of the British islands. The great extent to which the entire foreign trade passed to British shipping, and the steady growth of their tonnage entering United States ports, is shown in the following table, which continues the comparison previously begun, from 1830 to 1863 :

*National character of tonnage entering the ports of the United States—1829 to 1863.*

Year.	American.	British.	French.	German or Hanseatic.	Total all countries.

1853.....	4, 004, 013	1, 871, 210	28, 813	163, 801	6, 281, 943
1854.....	3, 752, 117	1, 748, 380	21, 837	216, 947	5, 884, 338
1855.....	3, 861, 391	1, 738, 123	18, 236	195, 576	5, 945, 339
1856.....	4, 385, 484	2, 152, 892	23, 935	152, 167	6, 872, 253
1857.....	4, 721, 370	2, 070, 926	29, 397	201, 478	7, 186, 316
1858.....	4, 395, 642	1, 841, 912	16, 416	200, 741	6, 605, 043
1859.....	5, 265, 648	2, 055, 110	22, 487	258, 528	7, 806, 035
1860.....	5, 921, 285	1, 918, 494	23, 557	230, 828	8, 275, 196
1861.....	4, 889, 313	1, 832, 971	15, 291	228, 336	7, 151, 355
1862.....	5, 117, 685	1, 836, 096	17, 008	276, 990	7, 362, 963
1863.....	4, 447, 261	2, 096, 612	22, 312	333, 354	7, 511, 284

To render the above comparison accurate as regards transoceanic commerce, a large reduction of the American tonnage should be made for the entries from Canada. For the ten years, 1854 to 1863, the American tonnage from Canada rose from 1,867,489 tons to 2,307,233 tons—averaging 1,250,000 tons for the first five years, and over 2,000,000 tons for the last five years. The average of British tonnage was about 850,000 tons for the ten years, increasing less from year to year. The transatlantic trade would therefore compare, between American and British, as follows, taking out the actual entries of each class from Canada:

	American, tons entered.	British, tons entered.
1858.....	3, 050, 925	928, 992
1859.....	3, 283, 062	991, 544
1860.....	3, 304, 009	1, 280, 458
1861.....	2, 892, 427	1, 148, 092
1862.....	2, 630, 312	1, 194, 560
1863.....	2, 140, 028	1, 353, 476

In the foreign trade of the United States proper, therefore, British shipping approaches much nearer to equality with our own than would appear without the separation of this Canadian trade, a large share of which is really ferry transit, as has before been explained.

## TONNAGE AND TRADE IN FIVE-YEAR PERIODS, FROM 1821 TO 1863.

The next following thirteen tables exhibit, respectively, the tonnage arrivals from all foreign ports severally, every fifth year from 1821 to 1863, with the percentage of foreign to the total; the total tonnage entered from all foreign ports, exclusive of Canada and the other British North American possessions; the like exhibit of the shipping engaged in the United States trade with the several countries of Europe, the West Indies, Mexico and South America, Asia, Africa, and miscellaneous countries, and Canada, respectively; and the total value of the imports and exports, with the percentage of each of the great geographical divisions of our foreign commerce, distinguishing the exchanges of the precious metals from those of ordinary merchandise. These tables are intended to exhibit the progress of our commerce during the last forty-two years, the relative value of our trade with the several customer nations, and the changed proportion of distribution; in effect, a tabled history of our commerce and navigation during the period embraced in the statements.

Two other tables are added: one showing the number, class, and tonnage of vessels built in the United States since 1822, and the other giving their distribution among the various branches of our foreign and home commerce.

NOTES.—The reciprocity treaty between the United States and Great Britain, concluded 5th of June, 1854, went into operation in the trade with Canada, October 18, 1854; with New Brunswick, November 11, 1854; with Prince Edward's island, November 17, 1854; with Newfoundland, November 14, 1855; and with regard to fish from all the provinces, on the 11th of September, 1854.

The aggregate exports (inclusive of specie and foreign merchandise) to Canada and the other British North American possessions for the three years 1852-53-54, amounting to \$48,216,518, exceeded the aggregate imports 113.4 per cent. The aggregate exports of the five years, from the 30th of June, 1854, (which period covered the first four and a half years of the operation of the reciprocity treaty,) amounted to \$132,903,752, exceeding the imports of the same period 41.3 per cent. The aggregate imports of the two years, 1860 and 1861, immediately preceding the rebellion, amounted to \$46,914,314, exceeding the exports 3.2 per cent. In the year 1862, the first full fiscal year of the rebellion, the exports, amounting to \$21,079,115, exceeded the imports 9.2 per cent.; and in the year ending June 30, 1863, the exports (\$31,281,030) exceeded the imports 30.2 per cent.

In the trade with the British North American possessions other than Canada, in the year 1851, the exports amounted to \$4,085,783, the imports to \$1,736,651. This commerce had gradually grown to double these amounts in 1860; the exports and imports holding about the same ratio, say the former about double the value of the latter. In the year 1863 the exports were \$10,998,505, the imports \$5,207,424. The Canada trade of 1851 amounted to \$12,885,611, of which the exports were 61.5 per cent. In 1860 the total trade was \$32,944,787, of which the exports were 43 per cent.; in 1863 the total trade rose to \$39,096,365, of which the exports were 52 per cent. In 1856, the year of the greatest trade with Canada previous to 1863, the total amount was \$38,371,438, of which the exports were 54 per cent.

## STATISTICS OF GENERAL TRADE WITH GREAT BRITAIN.

The great extent to which the course of foreign commerce has been diverted in recent years from direct lines to and from the countries of production and consumption gives a constantly increasing degree of importance to the statistics of trade with the countries in whose hands the carrying trade is being absorbed. The first and chief of these intervening countries is England. The statements annually published by that government are very full and comprehensive, and may be taken as the best available illustration of the commerce of the world. There are few articles the produce of any country which are not now largely carried through British ports, and whose quantities, values, and destination do not appear in the British statistics.

In the year 1862 the total value of British exports to the United States was £19,173,907=892,801,710, of which more than one-fourth was articles wholly of "foreign and colonial produce," their value being £4,846,037, or \$23,454,819. The manufactures designated as the produce of the United Kingdom were also made up in great degree of foreign staples, imported crude from the countries of their origin. The comparison of British exports to the United States for several years, distinguishing those of foreign origin, strikingly illustrates the progress of this carrying trade.

*Exports from Great Britain to the United States.*

	1857.	1858.	1859.	1860.	1861.	1862.
Of the produce and manufacture of the United Kingdom.	£18,985,939	£14,491,448	£22,553,405	£21,667,065	£9,064,504	£14,327,870
Of foreign and colonial produce	1,090,956	1,302,253	1,864,487	1,240,616	1,961,179	4,846,037

*In values of the United States.*

	1857.	1858.	1859.	1860.	1861.	1862.
Of the produce and manufacture of the United Kingdom	\$91,891,945	\$70,138,608	\$109,158,480	\$104,868,595	\$43,872,199	\$69,346,891
Of foreign and colonial produce	5,280,227	6,302,904	9,024,117	6,004,581	9,492,106	23,454,819
Totals.....	97,172,172	76,441,412	118,182,597	110,873,176	83,364,305	92,801,710

The increasing proportion of foreign articles to the total export in the last two years corresponds with the changed direction of commerce noted in the shipping accounts. For 1863 the value of foreign and colonial produce exported cannot be obtained, but the value of the produce of the United Kingdom sent to the United States is nearly the same as in 1862—£15,351,626, or \$74,301,869.

The crude staples of British manufactures are now in great proportion of foreign origin. Wool from South America, South Africa, Australia, and other colonies, and also from various continental states of Europe, is imported in immense quantities. Flax, undressed, from Russia, enters equally with the flax of Ireland into linen manufactures. The quantities of flax and hemp imported into England from Russia for six years amount to the following:

Years.	FLAX.		HEMP.	
	Tons.	Value.	Tons.	Value.
1857.....	63,745	\$10,695,494	29,035	\$4,633,574
1858.....	46,544	10,070,564	30,281	4,264,263
1859.....	53,723	12,870,054	35,460	5,075,311
1860.....	52,482	12,485,501	29,472	4,353,018
1861.....	47,623	10,913,769	23,043	3,444,245
1862.....	61,723	16,367,147	30,450	5,394,412

These are but single examples among many, showing the vast quantities of raw materials imported into England for manufacture, the final products of which constitute the exports designated as the "Produce and Manufactures of the United Kingdom." It is, therefore, but reasonable to estimate that a large share of those values are in a certain sense a portion of the indirect commerce between the real countries of production and those of consumption.

The carriage of foreign produce not manufactured in this manner is tending towards concentration in a few hands with great rapidity, and England far exceeds the German states and all others combined in the volume of this business. Taking tropical articles, or staples of almost universal consumption, and particularly those produced by distant countries, such as were for twenty or thirty years from the commencement of the great European wars the especial commerce of vessels of the United States, the results become very decided and conspicuous. The following table compares the quantities of such articles re-exported by England for five years to 1863:

*Exports from England of certain articles of foreign production.*

\* Of British possessions.

The designations of quantity given here to some extent mask the magnitude of a portion of the entries—sugar, rice, oils, dried fruits, tallow, and many other items, being designated in hundred-weights and tons, instead of pounds and gallons. In coffee, sugar, cocoa, indigo, wool, and others, the increase in 1863 is very great even over 1862, and the quantities are more than twice as great as those carried in 1859. In 1863, 41,842,311 pounds of wool were re-exported to the United States. In 1862 the following items are conspicuous among the foreign exports to the United States, which may also be found in the general table of exports of foreign and colonial produce, which follows in another place. They are here contrasted with 1860:

Articles.	1860.	1862.
Coffee .....	1,991	902,354
Cotton .....	73,808	21,507,360
Currants .....	186,592	1,435,392
Hemp .....	304	31,440
Indigo .....	529,648	1,722,000
Rice .....	58,912	24,147,200
Silk, raw .....	66,994	101,128
Silk, knubs .....	3,808	277,312
Skins, goat .....	171,555	385,893
Tea .....	89,820	2,539,508
Tobacco, manufactured .....	3,392	20,864
Wool .....	2,841,200	11,578,426

The corresponding quantities for 1863 cannot be obtained, except for wool and one or two other items. Many other articles increase in greater or less degree, as can be seen by reference to the general table of exports of foreign produce to the United States.

Before proceeding to the general statistics of British trade with the United States, as prepared from the official publications of that government, the relation of the United States to the distant tropical carrying trade, and to the carrying trade generally, may be further illustrated. The India trade was for a long time in American hands, and most cargoes arriving from the east for any port of the Atlantic markets broke bulk first in our own ports, and were re-exported in United States vessels to the west of Europe. This India trade also laid the foundation of many manufactures, among them those of morocco leather, silk spinning and silk finishing of piece goods, dyeing, &c. The Calcutta trade continued longest in the possession of United States vessels, being first for a long period carried to Philadelphia with the China trade, and for the last ten years controlled at Boston. It ceased nearly with the breaking up of sailing lines in the east, in 1862 and 1863, through the piracies conducted in the interest of the rebellion.

#### CARRIAGE OF FOREIGN PRODUCE BY THE UNITED STATES.

Of the total value of the exports of the United States, a proportion varying from one-half in the earlier years to one-fifteenth in 1860 was of articles of foreign origin. For fifteen years, from 1796 to 1810, the exports of domestic produce and of foreign produce were nearly the same; the aggregate for this period being \$547,525,900 of domestic and \$514,489,291 of foreign exports. In some single years the value of foreign articles carried became very large: in 1799, \$45,500,000; in 1801, \$46,642,000; in 1806, \$60,283,000, and in 1807, \$59,643,000. The average for periods of five years each, from 1796 to 1860, shows a large excess in the early periods over those of recent years:

Annual average, 1796 to 1800 .....	\$34,190,775
“ “ 1801 to 1805 .....	37,084,476
“ “ 1806 to 1810 .....	35,622,607
“ “ 1811 to 1815 .....	6,818,860
“ “ 1816 to 1820 .....	18,619,327
“ “ 1821 to 1825 .....	25,812,023
“ “ 1826 to 1830 .....	20,114,944
“ “ 1831 to 1835 .....	21,542,608
“ “ 1836 to 1840 .....	18,347,791
“ “ 1841 to 1845 .....	12,115,013

“ “ 1851 to 1855.....	21,968,924
“ “ 1856 to 1860.....	23,813,687
Single year 1861.....	21,145,427
Single year 1862.....	16,869,641
Single year 1863.....	25,959,248
Average of first ten years.....	\$35,637,626
Average of last ten years.....	22,891,306

A previous table shows the leading articles of foreign produce exported from Great Britain, and approximately the extent of the present carrying trade of that country. The same articles now make up the chief part of the trade of the United States in articles of foreign origin exported, and they have been the conspicuous elements of that trade from the beginning. A rapid increase in the quantities carried by England is observable, and a decline in those carried by the United States. To illustrate this tendency fully, as regards the United States, a comparison of periods of four or five years each, separated by a considerable interval of time, may be made, the first period being from 1824 to 1828, and the last five years ending with 1860. The first division of articles embraces crude staples of tropical or semi-tropical origin, with a few manufactures peculiar to remote countries, and subsequently a list of leading articles not of tropical origin is given:

*Articles of tropical or semi-tropical origin exported from the United States.*

Articles.	1824.	1825.	1826.	1827.	1828.
Cocoa .....	\$377,936	\$495,082	\$419,577	\$441,221	\$345,874

In view of the general advance of trade in these articles, the entire list must be regarded as having declined from the first to the second period.

## DIRECT TRADE WITH GREAT BRITAIN.

The British official tables of trade and navigation give the following values of imports from and exports to the United States for seven years, ending with 1862; the values being changed to their equivalent in money of the United States:

Years.	Imports from United States.	Exports to United States.
1856.....	\$174,471,221	\$109,465,684
1857.....	162,852,578	97,172,172
1858.....	165,804,920	76,441,513
1859.....	165,975,066	118,182,597
1860.....	216,600,657	110,873,176
1861.....	239,046,158	53,364,306
1862.....	134,141,360	92,801,710

Our own account of this trade is made up for fiscal years ending June 30, and it can therefore be compared definitely only in periods. It is impracticable to divide the fiscal year of the United States, and to reconstruct the summaries for calendar years.

Years.	EXPORTS TO GREAT BRITAIN.			IMPORTS FROM GR'T BRITAIN.
	Domestic.	Foreign.	Total.	
1855-'56.....	\$160,742,372	\$1,618,435	\$162,360,807	\$122,266,082
1856-'57.....	182,650,472	3,195,312	185,845,784	130,803,093
1857-'58.....	156,005,200	12,089,648	168,094,848	95,720,658
1858-'59.....	172,155,786	2,790,067	174,945,853	125,754,421
1859-'60.....	197,260,756	6,080,165	203,340,921	138,596,484
1860-'61.....	116,583,955	3,951,968	120,535,923	139,206,377
1861-'62.....	105,898,554	4,699,602	110,598,156	86,481,430
1862-'63.....	111,436,229	9,181,577	120,617,806	113,136,700

The British account does not include gold and silver bullion or coin, while the account of the United States does. The total value of specie and bullion sent to Great Britain among our exports in the seven years ending with June, 1862, was \$236,751,778, and the total received from Great Britain in the same period was \$55,894,096. The detail of this exchange of specie was as follows, as given in the United States record for fiscal years—the British statistics being for calendar years :

	Exports to England.	Imports from England,
1855-'56 .....	\$34, 161, 062	\$421, 771
1856-'57 .....	50, 890, 268	4, 069, 054
1857-'58 .....	39, 636, 001	6, 754, 357
1858-'59 .....	41, 760, 051	147, 383
1859-'60 .....	33, 380, 575	101, 371
1860-'61 .....	12, 174, 820	32, 678, 440
1861-'62 .....	24, 729, 001	11, 721, 720
1862-'63 .....	50, 339, 267	238, 499

*British account.*

	Imports into England from United States.	Exports to United States.
1856.....	Not given	£96, 227
1857.....	Not given	859, 110
1858.....	£4, 811, 772	202, 567
1859.....	9, 672, 981	14, 342
1860.....	4, 792, 582	1, 727, 220
1861.....	66, 683	7, 381, 953
1862.....	10, 064, 162	37, 528
1863.....	8, 147, 524	54, 195

NOTE.—The importations of gold and silver coin and bullion were exempted by law from entry inwards at the custom-house until the passing of the act of 20 & 21 Vict., cap. 62, in the year 1857.

Changing these to United States values they become :

	Imports into England.	Exports to United States.
1856.....	.....	\$465, 738
1857.....	.....	4, 642, 092
1858.....	\$23, 288, 976	980, 424
1859.....	46, 817, 228	69, 415
1860.....	23, 197, 306	8, 359, 448
1861.....	322, 745	35, 728, 652
1862.....	48, 710, 544	181, 635
1863.....	39, 434, 016	263, 303

The account of exports to the United States made up from British records is but \$50,690,707 for eight years, against \$56,132,595 recorded in the United States as imported from Great Britain, a difference of near five and a half millions of dollars. As the years 1856 and 1863 embrace very small exports, the correction of the United States account to calendar years would not remove the discrepancy. The account of imports into England is also short in British records as compared with our own. Taking the six years fully reported, the total by the British tables is \$181,170,815; and by American, for fiscal years, \$202,019,715, a difference of \$20,848,910. This difference is also too large to be explained by the differences in the years. It is to be noticed, however, that the British entry was by *ounces* both for gold and silver, with a computed value

"at the market price at the time of entry." This is probably the chief cause of the discrepancy.

Another and important point to be observed in the general comparison of the statistics is the incompleteness of the return of United States exports in the fiscal year ending June 30, 1861. For the last three quarters of that year certain ports of the southern States failed to make returns of the commerce transacted, which in most cases continued under the flag of the United States very nearly to the close of the fiscal year. At Savannah, Mobile, and New Orleans, the transactions of three entire quarters were not returned to the Treasury Department, and at all the other ports south of Norfolk two entire quarters were not returned. These ports were the channels through which nearly all the cotton, rice, and other staples of the south were exported, and the shipment of these was unprecedentedly active in the first months of 1861, and quite down to June of that year. In the original publication of the statistics of that year no correction was made for these omitted returns, and the effect is shown in the previous table of the total values exported to England as given by the two authorities. That country credits the United States with \$239,046,158 in value of exports, while the return, uncorrected for the omission of southern ports, is but \$116,583,955.

To make the best correction practicable in the case, it is assumed, as a minimum, that the exports at these ports for quarters not returned were at least equal to the transactions of the corresponding quarters of the previous year. The total value of the exports of those ports during the like period of the preceding year was \$161,011,950 of domestic produce, and about \$500,000 in value of foreign produce. This correction of the general aggregates cannot so readily be applied to the detail of countries. The great bulk of values was of cotton, and of this but a small proportion was to other countries than England. The evidence afforded by the British statistics is conclusive that the general sum assumed is too small, since the excess admitted by them is \$170,000,000 in the three years 1860, 1861, and 1862.\*

The British account of cotton alone received from the United States during the year ending with June, 1861, would show near a hundred millions of dollars' worth beyond the quantity officially returned in the United States as having been exported, the last-named aggregate being 207,342,265 pounds, value \$22,651,923. The British report, which can in this case be made to conform in time to our fiscal year, credits the United States with 968,006,928 pounds, value \$140,961,448.

	Pounds.	Value.
British.....	968,006,928	\$140,961,448
American.....	207,342,265	22,651,923
	<hr/>	<hr/>
Difference .....	760,664,663	118,309,525
	<hr/>	<hr/>

This statement of differences in one article for the period of one year proves that if all the exports were embraced in the correction, a total not less than twenty millions greater would be required for the entire correction. The following table of monthly receipts of cotton in England from the United States shows the course of this trade for three years, and the enormous proportions it reached in 1861, for which year the United States records fail to show what it was:

\* This correction was adopted in the finance report of the Secretary of the Treasury of December, 1863, increasing the total of domestic exports for the fiscal year 1860-'61 to \$389,711,391, and the foreign to \$21,145,427, the aggregate exports being \$410,856,818.

*Monthly receipts of cotton in England from the United States.*

Month.	1859.		1860.		1861.

November .....	221, 090	750, 051	52, 702	175, 234	286	1, 485
December .....	1, 446, 797	4, 641, 807	1, 044, 230	3, 472, 111	4, 029	20, 682
Half year.....	3, 861, 519	12, 799, 707	2, 768, 484	8, 418, 066	1, 442, 534	5, 864, 199
Year .....	8, 586, 672	28, 269, 579	9, 963, 319	30, 069, 719	7, 317, 169	26, 670, 399

Converting these into the quantities and values of the United States, the receipts of cotton in England for the three calendar years became:

	Pounds.	Value.
1859 .....	961,707,264	\$136,824,762
1860 .....	1,115,891,728	145,537,340
1861 .....	819,522,928	129,084,731

Even after the first of July, when the ports of the United States were closed to all legal trade, and for which no estimate has been made, the quantity of American cotton received in England was very great, amounting to 161,563,808 pounds, value \$28,382,723. Probably the larger share of that received in England in July was cleared from southern ports before the last of June, and therefore it properly belongs with the additions made to correct that account in comparison with our own.

Recurring to the summaries of exports and imports between the two countries, compared on a previous page, we may assume a correction of the export values of United States records given for 1860-'61 and 1861-'62, equal to the two values of cotton shown to be in excess in this last calculation, namely: \$118,309,525 in 1860-'61, and \$28,382,723 in 1861-'62. More clearly, these are corrections on the first and second half years of 1861; and whatever may be the deduction from them on account of the later months of 1861 is fully made up by the export of other articles of which no account has been taken. The addition to the United States is therefore the sum of \$146,692,248, still leaving a small deficit in the difference between this sum and \$170,000,000 before shown to be the British excess for three years, exclusive of the foreign exports. These foreign exports amount to \$14,731,735, leaving the actual difference about ten millions of dollars.

The other portions of the series agree very well with each other. There is reason to believe, however, that the United States record is generally short of the full values as regards produce actually landed for consumption in England. Many cargoes of provisions, grain, and flour clear for Irish or Channel ports for orders; and this was more frequently the case in 1861, 1862, and 1863,

than in previous years. Apparently being cleared for British ports, and so recorded at United States ports, they do not enter at those ports, and do not appear in their imports. During the year 1862 one hundred vessels touched at Cork for orders, of which a considerable share ultimately proceeded to continental ports.

It is, moreover, established beyond doubt that there are large deficiencies in the report of outward cargoes, particularly at the port of New York. There being no outward inspection, and clearance being always given on the oath of the shipper or agent, a degree of inaccuracy has grown up, which is mainly the consequence of haste. Undervaluations and imperfect schedules of cargo occur where no intent to evade the law exists, particularly as no questions of revenue are involved. Clearance only on the verification of cargo by an outward-inspector, as in nearly every European state, would be the only practicable measure for correcting these omissions, and for securing an absolutely full report of exports.

COMPARISON OF EXPORTS FROM GREAT BRITAIN TO THE UNITED STATES WITH  
THE REPORTED IMPORTS OF THE UNITED STATES RECORDS.

The chief fact disclosed by these comparisons is the gigantic character of the trade conducted through British ports for other nations, and for the general markets of the world, from which our direct shipping is being withdrawn. Either in the crude form in which they were imported, or in partial or complete transformation as manufactures, vast quantities of the staple products of the United States pass through England to other markets of final consumption in every year.

Taking the aggregates exchanged for six years preceding the war, or including one year of partial disturbance, each single year of the series gives a similar result, and confirms the general conclusion. The British record is short, comparing calendar with the nearest corresponding fiscal years, as follows:

	British statement deficient.	British statement in excess.
1856.....	\$12,800,398	.....
1857.....	33,630,921	.....
1858.....	19,279,145	.....
1859.....	7,571,824	.....
1860.....	27,723,308	.....
1861.....	85,842,071	.....
1862.....	.....	\$6,320,280

The exports of British produce and manufactures are reported at the "declared real value," or on the statement of the exporter, while the exports of foreign and colonial produce are at "computed real value"—a value determined upon the reported quantities by the officers of the customs. It can scarcely be believed that the values reported when entering United States ports are in excess, nor does there appear any probable correction of these entered values which will remove the discrepancy. The solution is undoubtedly to be found in the account of remittances in the form of bills of exchange drawn against the exports of United States produce, the extent of which remittances can only be inferred from the debt of the United States held abroad, in connexion with other causes.

According to a report of the Secretary of the Treasury, made to the Senate in 1854, the amount of American stocks and loans reported to be held by foreigners June 30, 1853, was two hundred and twenty-two millions of dollars. Large sums were also known to exist of which no report could be obtained, estimated at a total nearly equal to that reported. The increase accruing in

the next seven years we do not stop to estimate. French authorities have estimated the capital held by foreigners in United States national, State, and municipal stocks, including bank and railroad stocks, at a total sum of five hundred millions. Dividends and interest paid on this sum, averaging six per cent. per annum, would require remittances to the extent of thirty millions, for which sum there would of course be no commercial equivalent, either in commodities or in money. To this must be added the expenditures of travellers and the remittances of emigrants, together not less than five millions annually. The sum of thirty-five millions, therefore, is in all probability remitted in bills of exchange to Europe, and the excess of our exports over imports in recent years is to this extent accounted for; and whatever remains of the apparent excess of exports to Great Britain over imports may be balanced by the payment there of excesses of importation over exportation with certain other countries with whom our accounts are to some extent settled in England, amounting in 1861 to fifty one millions of dollars, due from us on our trade with the West Indies, South America, Asia, Africa, &c.

The extent of the annual differences appearing on the face of the commercial statements is large, and it does not appear to have attracted the attention its importance deserves. Taking the aggregates exchanged for six years preceding the war, or including one year of partial interruption or disturbance, 1861, as given in the British account, and exclusive of specie, the nominal balance appears highly favorable to the United States. The two sums, 1856 to the close of 1861, are:

Imports into Great Britain .....	\$1,124,750,600
Exports from Great Britain .....	683,783,700
Difference .....	440,966,900

Or an average of \$73,494,483 annually. Deducting the excess of specie sent to England, for which we must take the statement of the United States, and which was \$167,750,401, or \$27,958,400 yearly, the balance still remaining is \$45,536,083 yearly in favor of the United States. After all consideration has been given to the account of remittances just referred to, the general state of these gigantic exchanges is less unfavorable to the United States than has generally been supposed.

**TABULAR STATEMENTS OF EXCHANGES BETWEEN GREAT BRITAIN AND THE UNITED STATES, FOR SEVEN YEARS, 1856 TO 1862, FROM BRITISH RECORDS.**

The following tabular statements of the entire exchanges of the United States with Great Britain in detail is copied from the last annual volume of British Trade and Navigation Reports, for 1862. For 1863 only a few specific articles can be obtained, the monthly publications of the British government distinguishing countries only in a few leading articles. The first table embodies such as are so stated by countries, comparing the three years 1861 to 1863 only, and converting the values and quantities to like terms with those of the United States.

This preliminary table shows the enormous development of the petroleum trade within three years, and that grain, flour, and petroleum, have to some extent supplied the place of cotton as the basis of exchange on England. The sum of values of these leading articles is sustained in a most unexpected degree.

*Quantities of leading articles.*

Indian corn.....	22, 172, 927	16, 751, 085	19, 226, 774

Indian corn, known to be nearly all from the United States, is not distinguished as to countries; but it is assumed as approximately correct. Other staple exports, as of cured meats, lard, tallow, butter and cheese, and tobacco, are not separately stated in the British reports. They will be found in detail in the comparative table following those taken from the British records, prepared for fiscal years from the United States returns.

This table of exports is uncorrected for the omitted record of cotton exported to England, which has previously been shown to be near \$129,084,731 for the fiscal year 1860-'61; and several other items, hides, rice, rosin, spirits of turpentine and tobacco particularly, would add several millions of dollars in value.

The increase in the value of certain exports from 1860 forward has been referred to in connexion with the British statistics, but the records of the United States exhibit the fact in a still more striking manner. Butter, cheese, hops, hams and bacon, lard, petroleum and lard oil, tallow and tobacco, are quite as remarkably increased as is flour or wheat. A comparison of 1860 with 1862 and 1863 shows the fact. The year 1861, having no especial relation to the point under consideration, is not given.

Articles.	1860.	1862.	1863.
Butter.....	\$439,460	\$3,077,066	\$5,159,871
Cheese.....	1,192,458	2,226,047	3,655,119
Hops.....	757	574,867	1,577,670
Hams and bacon.....	1,589,528	8,894,606	15,044,991
Lard.....	1,811,418	4,455,685	6,059,986
Lard oil.....	1,566	82,782	835,290
Tallow.....	901,371	2,515,914	3,093,592
Pork.....	502,138	759,895	650,562
Tobacco.....	4,664,042	2,984,232	6,483,921
	11,102,738	25,571,094	42,561,002

The increase on the articles here named, none of which are distinguished in the British return before quoted, is thus \$14,470,000 in 1862 over 1860, and in 1863 the very large excess of \$31,460,000.

The important article, petroleum, was unfortunately not distinguished in the quarterly returns until July, 1863, the commencement of the fiscal year 1863-'64. The largest proportion of the sum assigned to unenumerated articles for 1862-'63 was for petroleum, which may be approximately stated at \$1,000,000 for 1861-'62, and \$4,000,000 in 1862-'63.

In view of the omission of cotton and rice almost altogether from the exports to England in the last two years, the general aggregate at which these exports are maintained is remarkable. In 1860, with very large values for these staples, the total was less than thirty millions in excess of 1863, fiscal years.

	Values of 1860.
Cotton.....	\$134,928,780
Rice.....	346,576
Rosin and turpentine.....	964,666
	<u>136,240,022</u>

Comparing this with the difference of 1860 and 1863 in the aggregates, it appears that the increase of northern staples supplied \$106,250,000 of this loss in cotton, and this during a period of unprecedented trial to the national resources, and of vastly increased domestic consumption.

Some account of the difference in specie exports is due, however, in the above comparison; the exports of specie and bullion to England being \$45,000,000 in 1862-'63, against \$31,635,000 in 1859-'60. But the production of gold, and the great import of foreign gold from England in 1861 and 1862, had produced a surplus leading naturally to exportation.

## BRITISH TRADE WITH CALIFORNIA.

The British official records distinguish the trade with California from that conducted with other parts of the United States. The tables previously given cover the entire trade, California included, and those that here follow are of California alone.

The annual values of this trade converted into terms of the United States are as follows :

	Imports from California.	Exports to California.
1856.....	\$162, 827.....	\$2, 226, 937
1857.....	5.....	2, 185, 260
1858.....	70, 581.....	2, 523, 411
1859.....	139, 760.....	2, 224, 570
1860.....	90, 455.....	3, 024, 985
1861.....	3, 414, 968.....	2, 085, 691
1862.....	1, 722, 294.....	1, 817, 236

It is apparent that the direct trade of England with the Pacific coast of the United States is relatively less than with other sections. That trade is a coasting trade to vessels of the United States, and is protected by the laws relating to the coasting trade generally. Clearance to California direct from European ports is far more difficult than transshipment at the Isthmus of Panama. The direct trade of San Francisco with foreign countries is, therefore, larger with the East Indies and China than with European countries.

The magnitude of the trade with the Pacific States opens an inviting field to foreign occupation, but its peculiar circumstances have so far protected it. They may continue to do so in a great degree, if the quality of coasting trade and the laws which preserve it to vessels of the United States are rigidly maintained ; but if these were yielded, a very little time would suffice to displace United States shipping in as great a degree in the Pacific as in the Atlantic.

## STEAM TONNAGE IN THE FOREIGN TRADE OF THE UNITED STATES.

Steamships were introduced into the foreign commerce of the United States in 1840, but they were of little importance for the carriage of merchandise until nearly ten years later, when the establishment of American lines to Europe, competing with the British, developed the capacity of steam transportation, and prepared the way for its general introduction into the transatlantic trade. For two or three years previous to 1850 the aggregates of steam tonnage entering the ports of the United States swelled the volume of foreign shipping very sensibly. At a later period, and with large vessels, the increase of this tonnage has been rapid, until it has reached proportions nearly equal to the sailing tonnage of all classes coming from the two or three leading commercial countries of Europe. The system was, in fact, suddenly and almost completely built up in 1848, 1849, and 1850; American lines to Havre, to Bremen and Southampton, and to Liverpool, across the Atlantic, being established simultaneously with one to Havana from Charleston, and the vast, half-foreign California and Isthmus lines. The tonnage of all these goes to swell the aggregate of tonnage published in official reports as arriving from foreign ports; but the entire Isthmus and California trade, including all that touching at Vera Cruz and Havana, either to and from the Isthmus or to and from New Orleans, should properly be separated from that crossing the Atlantic. It is so separated in the following statements, and the effect is to greatly reduce the proportion of American steamship tonnage appearing to be employed in foreign trade. Technically, clearances from Panama for San Francisco are from foreign countries, but, in fact, little or no commerce with foreign countries is represented. Little or none is represented in arrivals at New York from Chagres or Panama, or in arrivals from Cuba of steamers merely touching at that port on their way from Mexico or the Isthmus.

The statistics of steam tonnage employed in the foreign trade of the United States, therefore, require to be stated with several discriminations, to be properly understood. In the aggregate, the proportions of American and foreign appear nearly equal; but when the distinctions just referred to are made, and the absolute foreign trade only is considered, the amount of American tonnage is

greatly reduced. For several years, however, or from 1851 to 1857, the American transatlantic steam lines had great success, and attained an ascendancy in that trade that appears favorably in the statistics. The arrivals at New York alone were over 120,000 tons for each of several years, and this against an average of about 80,000 tons of foreign. The Isthmus and Cuban arrivals of United States steamers, entered as foreign, amounted to 160,000 tons more at New York, yet the merchandise traffic by them from any foreign country was very small in amount, and the statements should be kept distinct.

There is also a large local trade conducted by steamers with Canada on the great lakes, the tonnage of which is technically classed with that entering from foreign ports, yet which does not represent any considerable trade strictly to be designated foreign. The annual arrivals of this tonnage are 2,300,000 tons or more,\* but its character is more nearly that of ferry and passenger transit than anything else. The amount is so little significant of commerce such as the transatlantic trade always must be, whether conducted by steamers or sailing vessels, that it has not been compiled to illustrate the relation of steam to foreign commerce generally.

With the British provinces of the Atlantic coast there has been for many years a moderately active traffic in small steamers. They sometimes come down to Boston or New York, but generally run only between the ports of Maine and Halifax, or elsewhere in Nova Scotia and New Brunswick. When running regularly, the amount of this tonnage is separately stated in the following tables:

*Steam tonnage entered at Portland, Maine, from foreign countries.*

Fiscal year ending June 30—	FOREIGN VESSELS.

There were no entries of American steamers.

\* No distinct separation of the steam and sailing tonnage of the lakes having been made for years previous to 1863, it is impracticable to state the exact figures, but it is assumed that more than two-thirds of the arrivals are steam. Probably the proportion is nearly three-fourths. The American arrivals of all sorts at lake ports in 1860 were 2,617,276 tons, and of British tonnage 658,036 tons; together, 3,275,312 tons.

*Steam tonnage entered at the port of Boston from foreign countries.*

For the fiscal years 1841, 1842, and 1843, an average of about four thousand tons of foreign arrived at New York.

The actual proportion of the tonnage recorded as in the foreign trade of the United States resulting from the entry of steam vessels is very large, both of American and of foreign vessels, but, as has been said, much of it is in fact not what the record appears to make it. The Isthmus trade is really coastwise rather than foreign, and therefore all, or nearly all, the American steam tonnage entering at San Francisco and New Orleans, with the Isthmus arrivals at New

York, should be struck off. The entries at both New York and New Orleans from Cuba and Mexico are in a great degree of steamers merely touching at Havana and Vera Cruz for passengers and mails, and carrying very little freight. A more legitimate trade was for several years conducted by the steamer Isabel, from Havana to Charleston.

On the North Atlantic coast, again, the steamships touching at Portland and Boston appear in some cases to have been regularly entered there, as well as at New York, in most cases, probably, bringing cargo for both ports. The Cunard line had its original terminus at Boston, however, and steamers have constantly fully discharged at Boston and Portland both, when running as part of the regular lines, or as extra ships on them, from Liverpool. The lake steamer tonnage is, of course, entirely excluded, and the direct transatlantic trade is therefore reduced to the arrivals at Portland, Boston, New York, and Philadelphia. Stating this separately, the following is the result:

*Actual steam tonnage arriving in foreign trade.*

Fiscal year ending—	American.	Foreign.	Total.
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>
June 30, 1844.....		4,572	4,572
1845.....		3,780	3,780
1846.....		28,496	28,496
1847.....		21,236	21,236
1848.....	12,414	41,357	53,771
1849.....	20,801	69,897	90,698
1850.....	19,181	70,462	89,642
1851.....	80,123	69,201	149,324
1852.....	100,199	105,739	205,938
1853.....	118,005	144,224	262,229
1854.....	107,713	151,346	259,059
1855.....	94,423	120,108	204,531
1856.....	138,983	119,236	258,219
1857.....	102,706	282,587	385,293
1858.....	112,391	254,845	367,236
1859.....	63,542	336,558	400,100
1860.....	68,564	387,885	456,449
1861.....	68,880	439,466	508,346
1862.....	15,884	424,579	440,463
1863.....		473,114	473,114

To include Charleston, the American totals would be increased about twenty thousand tons annually from 1851 to 1861; but this could not be considered transatlantic trade in the sense represented above, being wholly from Havana.

*Steam tonnage entered at the port of San Francisco from foreign countries.*

*Steam tonnage entered at the port of Charleston from foreign countries.*

	American vessels only.	Tons.
Fiscal year ending June 30, 1851 .....		14,926
1852 .....		18,696
1853 .....		22,000
1854 .....		22,317
1855 .....		20,487
1856 .....		21,204
1857 .....		21,917
1858 .....		21,010
1859 .....		26,781
1860 .....		26,990
Half year to December, 1860 .....		11,604

For the first three years the entries are in part estimated, the record for one or more quarters of each being lost. All the entries were from Havana.

The steam tonnage arriving at New Orleans from foreign ports was technically large from the commencement of the Isthmus trade to the close of 1860, and all in American vessels. Estimating for the record of two or three quarters, the following is the tonnage, about one-half of which is from Havana, Cuba, and the other half from the Isthmus, Central America, and Mexico. The years 1855, 1856, 1857, and 1860 are complete:

	Tons.
Fiscal year ending June 30, 1855 .....	60,868
1856 .....	64,571
1857 .....	76,514
1858 .....	75,000
1859 .....	78,000
1860 .....	88,530

The New York line touching at Havana was mainly a coasting and passenger trade, and this makes up more than half the total. The arrivals from the Isthmus and Mexico were much the same.

At Mobile there were a few arrivals of American steamers from foreign ports, but their amount in any year was small.

On the northeastern frontier, entering at Castine, Maine, (district of Passamaquoddy,) there is a large aggregate of tonnage accumulated by the frequent trips of small American steamers plying to New Brunswick and Halifax. The average of such arrivals amounts to over 60,000 tons annually since 1853, being in the fiscal years—

	Tons.
1854-'55 .....	64,219
1855-'56 .....	67,401
1856-'57 .....	53,178
1860-'61 .....	55,428
1861-'62 .....	75,324
1862-'63 .....	61,444

The intervening years are not readily distinguished. This was all tonnage of American vessels.

The swelled volume of tonnage arriving from foreign countries during the last ten or fifteen years is more largely due to steam than would at first appear, in consequence of the introduction of the items above described. Taking the

fiscal year 1859-'60 as an example, the total tonnage reported as arriving in the foreign trade is of—

American vessels .....	tons..	5,921,285
Foreign vessels .....	tons..	2,253,911
Total .....	tons..	8,175,196

Excluding the tonnage from Canada, the American is reduced to 3,304,009 tons, and the foreign to 1,594,575 tons. Deducting, further, for the California and Isthmus trade in American steam vessels—

For entries at New York .....	tons..	170, 641
For entries at New Orleans .....	tons..	88, 530
For entries at San Francisco .....	tons..	125, 400
For entries at Castine, Maine .....	tons..	55, 000
Total .....	tons..	439, 571

The tonnage actually entering in the foreign trans-oceanic trade is reduced to 2,864,438 tons. The peculiar conditions attending the technical statements of tonnage and shipping have thus, to a great extent, concealed the injuries which have been suffered in general ocean commerce, misleading to the impression that large accessions were being made to the shipping so employed, when, in fact, great and most injurious reductions were taking place.

#### THE ISTHMUS TRADE.

The peculiar character of the trade passing the Isthmus of Panama, the tonnage of which appears as entered and cleared for foreign countries, but which, for reasons before stated, is taken as almost exclusively coastwise, is best explained in the consular reports from Panama, from which the following statements are taken. These statements do not distinguish the values from each country entered for consumption—only the total values from all countries.

#### *Values of cargoes entering Panama.*

Year ending—	For consumption.	In transit for the U. States.	In transit for Europe.	Total.
September 30, 1860 .....	\$1, 375, 814	\$36, 846, 939	\$14, 925, 250	\$53, 148, 000
1861 .....	1, 145, 310	50, 146, 345	13, 056, 250	64, 347, 905
1862 .....	2, 443, 815	28, 232, 400	27, 000, 244	*57, 826, 620

\* Including \$144,160 in transit for the South Pacific coast.

#### *Values of cargoes from Panama.*

Year ending—	Exports of Panama.	In transit from U. S.	In transit from Europe.	Total.
September 30, 1860 .....	\$129, 000	\$8, 325, 000	\$4, 400, 000	\$12, 784, 000
1861 .....	250, 000	10, 169, 225	2, 205, 625	12, 624, 850
1862 .....	2, 869, 857	11, 647, 596	5, 113, 394	24, 795, 428

In 1860 there was, also, of merchandise exported, in thirty-one British vessels, to the South Pacific coast \$3,500,000, and in vessels of other nations \$1,200,000. In 1862 there is included in the outward total the following items:

Value of cargoes from Central America to South Pacific.....	\$66, 000
Value of cargoes from South Pacific to Central America.....	76, 250
Value of cargoes from Europe and elsewhere (treasure).....	4, 444, 268
Value of cargoes from Europe and the United States (jewelry)...	578, 062

The total values inward and outward are therefore—

Years.	Inward.	Outward.	Total.
In 1859.....	\$57, 679, 925	\$13, 857, 000	\$71, 536, 925
In 1860.....	53, 148, 004	17, 484, 000	70, 632, 004
In 1861.....	64, 347, 905	12, 624, 850	76, 972, 755
In 1862.....	57, 826, 620	24, 795, 428	82, 622, 049

The very small proportion of trade for consumption in Panama, and of outward exports, the produce of Panama, is decisive that the tonnage of United States steamships on that line cannot properly be regarded as in the foreign trade.

In 1862 further statements of tonnage arrived and cleared are given as follows:

*Vessels arrived at Panama, and their tonnage for the year ending September 30, 1862.*

Arrived inward.	No.	Tonnage.	Outward bound.	No.	Tonnage.
American ships.....	60	89, 184	American ships.....	57	86, 578
English ships.....	42	30, 611	English ships.....	42	30, 611
Spanish ships.....	2	475	Spanish ships.....	2	475
French ships.....	2	536	French ships.....	2	536
New Granadian and all other..	70	3, 350	N. Granadian and all other..	70	3, 350
Total.....	176	124, 156	Total.....	173	121, 550

The value of cargoes in American bottoms, inward and outward, in 1862 was \$59,671,194.

The following statement of the transit of treasure and freight over the Isthmus of Panama in 1862, towards the Pacific and towards the Atlantic, is also from the consular report for 1862 of Alexander McKee, United States consul at Panama.

*Travel and transportation over the Isthmus of Panama for the year ending September 30, 1862.*

	Towards the Pacific.	Towards the Atlantic.	Total.
Passengers..... number.....	21, 456	9, 706	31, 162
Gold..... value.....	\$4, 444, 268	\$34, 605, 467	\$39, 049, 736
Silver..... do.....	.....	\$14, 285, 935	\$14, 285, 935
Jewelry..... do.....	\$578, 062	.....	\$578, 062
American mails..... pounds.....	232, 886	31, 964	264, 850
English mails..... do.....	35, 565	10, 127	45, 692
Extra baggage..... do.....	345, 547	217, 901	563, 448
Freight by weight..... do.....	54, 758, 378	20, 061, 601	74, 819, 919
Freight by measure..... feet.....	737, 684	33, 279	770, 963

Of the treasure carried towards the Atlantic there was :

Gold to the United States.....	\$26,401,693
Silver to the United States.....	16,513
Gold to England.....	8,091,032
Silver to England.....	14,198,008

#### REVIEW OF STEAMSHIP LINES.

As the tonnage accounts appear in the official records the various ocean steamship lines are but imperfectly disclosed. First, after the experimental trip of the *Sirius*, in 1838, the Great Western ran for several years—1840 to 1846—almost alone to New York. In 1842 and 1843 there were three or four arrivals of the *British Queen* from Antwerp; but the principal opening of the steamer trade was made by the Cunard line, established in 1840 and 1841, from Liverpool, *via* Halifax, to Boston. There were several of these vessels, the *Columbia*, the *Acadia*, the *Caledonia*, and *Britannia*, the first four of the line. The *Columbia* was lost in 1843, and was succeeded by the *Hibernia* and the *Cambria*,\* to which were added, on the extension of the line to New York, in 1848, the *Niagara*, *Europa*, *Canada*, *America*, and the *Trent and Severn*, of the West India line, occasionally came to New York. The Cunard line was the pioneer as a commercial venture strictly. It always carried a larger share of merchandise than other British lines, and larger also than the American line afterwards established to British ports. A French line from Havre appears in the arrivals at New York in 1847, three or four steamers of about 600 tons each, but they disappear in 1848.†

In 1848, simultaneously with the extension of the Cunard line to New York, and its enlargement to a total of 55,000 tons arriving in the fiscal year 1848-'49, there was an American line to Bremen established. The *Washington* and *Herrmann*, and a large steamer, the *United States*, made several trips to and from Havre. The Isthmus lines were begun nearly at the same time, expanding rapidly in 1850 and 1851, and, as they touched at Vera Cruz and Havana frequently, their tonnage appears as foreign arrivals, entering from Mexico and Cuba, though conducting little actual foreign commerce. In 1850 the first arrivals of the *Collins* line were reported at New York—the *Atlantic*, *Pacific*, *Arctic*, and *Baltic*. The tonnage by these ships rose to 75,000 tons annually in 1853 and 1854, but the line was abruptly discontinued in 1857.

An interruption of the Cunard line to New York occurred in 1855, amounting to an absolute discontinuance for the entire year, but it was fully resumed in 1856. The tabular statement preceding being for fiscal years, does not show the fact of discontinuance during the calendar year 1855. The line ran to Boston, however, as usual.

In 1856 a French line from Havre was started to New York, composed of the *Barcelone*, the *Lyonnaise*, the *Alma*, and *Cadiz*, but they made a few trips only. Several British steamers—the *Jason*, *Etna*, *Alps*, &c.—made a few trips also from Havre to New York in 1856 and 1857, but they were not afterwards continued.

From Bremen the *Hansa*, a Bremen vessel, in 1856 and 1857, made a few trips to New York, and the *Jason* and *Argo*, British, after the withdrawal of the

\* In the tonnage of arrivals at Boston the capacity of these vessels is given at a much lower figure than when, in 1848, they were reported at New York; the *Cambria* being at Boston 760 tons, and at New York 1,334 tons; the *Hibernia* 791 and 1,324 tons; the *Acadia* 612 and 1,300 tons; the *Britannia* 609 and 1,161 tons; the *Caledonia* 615 and 1,116 tons. No sufficient reason appears for the discrepancy; but as it was admitted in the original calculations of tonnage, the materials for this statement must now be made up in the same manner. This discrepancy in the tonnage of the same steamships recorded at Boston and New York continues to the close of the employment of the first line of ships in 1862.

† Entered as the *Union*, 704 tons; the *Philadelphia*, 593 tons; the *New York*, 586 tons; and the *Missouri*, 599 tons.

Hermann and Washington, American. A line of Belgian steamers was also started in 1856—the *Leopold*, the *Belgique*, and *Constitution*—but soon withdrew. The Hamburg steamers *Bornesia* and *Hammonia*, and the Bremen line, before referred to, continued in successful operation, between the North German ports and New York, from their beginning in 1856. In 1859 and subsequent years they received the addition of two or three heavy steamers—the *Teutonia*, *Bavaria*, and *Saxonia*, from Hamburg, and the Bremen and New York, from Bremen. Together the amount of this tonnage from Hamburg and Bremen rose rapidly from 1858 forward, amounting to 109,892 tons in the calendar year 1863. The success of the line has been so decided as to lead to a large diversion of the trade of continental Europe through the ports of Bremen and Hamburg, ranking them next to England in the general amount of trade with the United States.

The trade with France, largely carried by the American line of steamers to Havre from 1857 to the close of 1861, is now received through a British-built line, just making its first passages in June, 1864, and a second line of new foreign steamers is also started between Liverpool and New York.

The effect of the establishment of the Bremen and Hamburg lines of foreign steamers on the trade of the United States with those countries is so striking as to require notice here. The following is a comparison, beginning with 1855, of the proportion of American and foreign vessels engaged in the trade of the United States with those ports:

*Vessels and tonnage entered the ports of the United States from Hamburg and Bremen.*

Period.	AMERICAN VESSELS.		FOREIGN VESSELS.	
	No.	Tons.	No.	Tons.
Fiscal year 1854-'55.....	50	39,525	236	159,807
1855-'56.....	38	37,293	214	121,498
1856-'57.....	36	37,411	264	171,844
1857-'58.....	30	91,300	235	169,060
1858-'59.....	9	11,223	218	186,599
1859-'60.....	5	4,033	193	170,222
1860-'61.....	12	8,298	181	161,005
1861-'62.....	10	7,361	196	189,604
1862-'63.....	9	9,018	183	179,595

The conduct of this trade has, therefore, almost wholly passed to other than United States vessels. The value of the trade has also increased beyond all proportion to the tonnage. In 1859-'60 the imports from the two ports were \$18,498,607, and the exports \$18,378,703—a total trade of \$36,877,310, a very little, indeed, of which was carried by American vessels.

PRESENT CONDITION OF FOREIGN STEAM LINES (JUNE, 1864.)

The present condition of the foreign steam lines to the United States is shown in the following table, first embodied in a memorial to Congress by the Chamber of Commerce of New York:

*Foreign steam lines to the United States, January, 1864.*

Line.	Route.	Name of steamer.	Tonnage of each steamer.	Total tonnage.	Remarks.			
Cunard line.....	Liverpool to New York, and Liverpool to Boston.	Scotia .....	4,137	26,870	Under subsidy.			
		Persia .....	3,688					
		Australasian .....	2,663					
		China .....	2,522					
		Arabia .....	2,285					
		Africa .....	2,088					
		Asia .....	2,051					
		Europa .....	1,751					
		America .....	2,030					
		Niagara .....	1,824					
		Canada .....	1,831					
Screw line.....		Kedar .....	1,628	6,682	Transferred from Philadelphia to New York in 1857.

		Hammonia .....	2,100	10,155	Under subsidy.			
		Teutonia .....	2,400					
		Borussia .....	2,100					
		Germania .....	2,600	1,560				
North German Lloyds steamship line.		America .....	2,509					
		New York .....	2,366					
		Hansa .....	2,882	104,051				
		Bremen .....	2,398					
Jamaica, Hayti, Nassau, and Havana.		Saladin .....	518	1,560	Under subsidy.			
		Corsica .....	1,042					
		Aggregate tonnage.....		104,051				

The Adriatic, here named as one of the Galway line, and now owned abroad, was originally built for the Collins line, and is the only steamer of American build which crosses the ocean. To the list above given, from January to June, 1864, the following have been added :

*The General Transatlantic Company's line between New York and Havre.*

Washington, 3,204 tons .....	900 horse power.
Lafayette, 3,204 tons .....	900 horse power.
Eugenie, (afloat) .....	900 horse power.
France, (building) .....	900 horse power.
Napoleon III, (building,) .....	1, 100 horse power.

*The National Steam Navigation Company's line, New York to Liverpool.*

Virginia .....	2, 876 tons.
Pennsylvania .....	2, 972 tons.
Louisiana .....	2, 166 tons.
Westminster .....	-
Queen .....	3, 612 tons, (building.)
Erin .....	3, 215 tons, (building.)
Ontario .....	3, 212 tons, (building.)
Helvetia .....	3, 209 tons, (building.)

Various propositions for the establishment of new American steam lines to foreign countries have been made during the last year, and it has been claimed that the aid of the government should be accorded to any lines which should be opened, at least to the extent of the aid regularly accorded by the British government in like cases. The circumstances surrounding any such enterprises at the present time are decidedly adverse, unless aid of some decided character is afforded. The national and semi-official character attached to European steamer lines by the governments supporting them undoubtedly goes far toward securing them precedence in passenger carriage, in important and valuable freights, and in every element of security, with the advantages it brings—the consideration of chief importance now in distant voyages. A system of official recognition similar to that which has so long characterized the royal mail steamer lines of Great Britain is urgently needed for the United States.

At the instance of the promoters of a new steam line to Brazil, among others, Congress has just passed an act extending aid in the form of guaranteed payments for postal service.

The following very valuable statements and tables from the memorial of the Chamber of Commerce of New York, before referred to, prepared by John Austin Stevens, jr., esq., secretary, are by permission reproduced here. They cover the several points to which they relate so completely as to render the preparation of similar tables unnecessary, while it would be scarcely possible to equal them in force and completeness. The principal table of existing steamer lines previously copied is given at the close of a history of American steam lines, from which the statement of passages which here follow are taken.

Total average per mile, \$2 10½. Average of four principal lines, \$2 39.

These subsidies have been gradually increasing from the year 1850, and additions made as new services were required from the lines, growing out of the increased commerce which followed their establishment; and in times of commercial distress, as well as in prosperity, the same sustaining and unfaltering protection has always been afforded by the sagacious and far-seeing policy of the British government.

## STEAM SHIPPING AND TONNAGE OF GREAT BRITAIN.

The steam marine of Great Britain is intimately related to that of the United States so far as foreign trade is concerned. The increase of foreign shipping of all classes conducting the foreign trade of the United States is almost wholly British, and the successful lines of steamers newly established, as well as those which have at any time taken the place of American lines, are also nearly all British. The statistics of British shipping are, therefore, essential to the proper consideration of the changes in progress directly affecting American shipping.

The first table which follows shows the tonnage of all classes entering British ports for five years to the close of 1863, the steam tonnage not being separated. The most conspicuous fact apparent in this table is the increase of the aggregate of British tonnage, the fixed position of foreign tonnage, and the decline in tonnage of the United States.

*Summary of tonnage entering ports of Great Britain.*

	In 1859.	In 1863.
British.....	5, 388, 953	7, 299, 417
All foreign.....	3, 700, 597	3, 838, 529
United States.....	1, 077, 948	692, 337

The increase of British is near 2,000,000 tons, while that of the United States declines 385,611 tons in five years. A still greater decline is apparent when the maximum year 1861 is compared with 1863, the first giving a total of 1,647,076 tons, and the decline to 1863 being, therefore, 944,739 tons. This decline is undoubtedly due to the immense number of American vessels sold abroad in 1861, 1862 and 1863, the great majority of which were purchased by the British. Thus the increase of steam vessels, which is wholly foreign, combines with the loss of the magnificent fleet of sailing ships, long the pride of United States commerce, to expel the United States flag from the chief centres of foreign commerce.

It is noticeable that France and the German, as well as other continental states conduct a relatively small trade with British ports. The largest item of tonnage is Norwegian, the next Prussian; yet the largest is but a tenth part of the British tonnage; and the total belonging to all other countries is, in 1863, reduced to about half the aggregate of arrivals. The progress made toward the entire control of the British trade by British shipping during the five years covered by the table is very extraordinary, and it is probably mainly due to the rapid development of steam transportation in every line of commerce, and in the carriage of heavy and crude tropical products as well as in the exchanges between states producing the most valuable classes of goods.

The statistics of British steam tonnage in foreign trade are somewhat difficult of access. The distinction between registered and enrolled vessels is not there, as in the United States, a general line of separation between the class of shipping in foreign trade and that in the coasting trade. Very narrow seas separate England from several distinct foreign powers, and the most positive form of papers establishing the nationality of a vessel are necessary as well as convenient, therefore. Of the registered steam vessels belonging in England in 1860 and 1861 a large proportion were under fifty tons, as follows :

Years.	STEAM VESSELS OF 50 TONS OR LESS.		STEAM VESSELS OVER 50 TONS.	
	No.	Tons.	No.	Tons.
In 1860.....	802	18,471	1,186	433,831
1861.....	854	19,683	1,268	485,015
1862.....	898	20,864	1,319	515,270

The employment of British registered steam vessels, not including colonial, as divided between the home and foreign trade in 1860, 1861 and 1862, was as follows, exclusive of river steamers :

Years.	IN HOME TRADE.		PART HAVRE AND PART FOREIGN.		IN FOREIGN TRADE.	
	No.	Tons.	No.	Tons.	No.	Tons.
In 1860.....	402	92,254	80	29,803	447	277,437
1861.....	448	102,795	72	24,924	477	313,465
1862.....	434	104,020	89	29,463	510	328,310

*Total in all, other than river trade.*

Years.	No.	Tons.
In 1860.....	929	399,494
1861.....	997	441,184
1862.....	1,033	461,793

The number of steam vessels built and registered in the United Kingdom from 1853 to 1861 was large, and three-fourths or more were built of iron.

*Number and tonnage of steam vessels built in the United Kingdom.*

Years.	No. of iron.	Whole No.	Tonnage.
1853 .....	117	153	48,215
1854 .....	152	174	64,255
1855 .....	195	233	81,018
1856 .....	175	229	57,573
1857 .....	155	228	52,918
1858 .....	112	153	53,150
1859 .....	106	150	38,003
1860 .....	149	198	53,796
1861 .....	159	201	70,869
1862 .....	181	221	77,338

The preponderance of iron in steamship building began in 1853, and it is noticeable how completely that material has controlled since that time. In the ten years of the table there were 1,501 steam vessels built of iron, out of a total, of all dimensions, of 1,940 only, leaving but 439 built of timber.

The proportion to which foreign-built steam vessels enter into the home or foreign trade of England is relatively smaller than the sailing tonnage, notwithstanding the opening of the coasting trade to foreign bottoms in 1853. The German states and the French have a moderate share in that trade—small, indeed, rather than moderate—while the United States have now absolutely none. The united tonnage belonging to all foreign nations is not one-sixth of the whole.

\* From the valuable memorial of the Chamber of Commerce before referred to. The various statements and explanations of that memorial cover almost exactly the ground here embraced, and the statistics are necessarily nearly identical. The entire matter of the memorial is extremely compact and clear in its illustration of the present position of British steam vessels in general foreign commerce.

The total tonnage and the number of vessels is more than double in 1862 over 1853, and the increase is almost wholly British, the American almost wholly disappearing in 1862, although creditably large in 1853. The steam marine of Sweden, Norway, Denmark, and the north of Europe generally, shows a very fair development from 1853 to 1861. The French and Spanish share in the increase; and, on the whole, the development of European states in this respect indicates a purpose in each not to be left behind in the progress of ocean commerce.

The British statements of trade in steam vessels to American countries north and south are worthy of attention:

*Entrances of steam vessels at ports of the United Kingdom from the United States for 1853, 1860, 1861, and 1862.*

Years.	BRITISH.		AMERICAN.		OTHER COUNTRIES.		TOTAL.

1862 .....	152	227,468	1	618	4	5,316	157	233,402

While, as this table shows, there are now very few entries of steam vessels from the United States at British ports except the British, there are many entrances and clearances of steamers of other countries to and from other ports of the continent southward. Steamers of Spain, France, and Germany are already in the carrying and passenger trade of the tropical countries of this continent. From Cuba one Spanish steamer entered and cleared at a British port in 1860, and three in 1861. From Brazil, twenty-four steam vessels entered in 1853, twenty-four in 1860, and twelve in 1861—sixteen being British and eight of other countries in the ten years first named. In 1861 all but one were British. From St. Thomas (Danish West Indies) there were twenty-four to twenty-eight each year, nearly all British; from New Granada five to seven, and clearances of one or more to almost every American State. This point is of especial importance, since it invades a trade hitherto belonging in great part to the United States. The following table gives the number of these entrances and clearances, with their tonnage, without distinction of nationality:

*Steam vessels entered at British ports from American countries.*

The nationality of these vessels has been in great part stated. None are United States vessels except those trading from the United States, and but four or five of these in 1860 and 1861. Further statistics of this sort, being obtainable only in the British annual volumes of Trade and Navigation, cannot be given for the year 1863. The statements for 1863 undoubtedly develop and extend the changes which the comparison of 1853 with 1860, 1861, and 1862 shows to be in progress. Great numbers of vessels have been built to add to the British steam marine in the last year, and their various lines have been very active in American trade, north and south. As shown previously, the number of steam vessels built in England in 1862 was 221, with a tonnage of 77,388 tons—a greater number than in any previous year.

## TRADE OF THE UNITED STATES WITH CANADA AND THE OTHER BRITISH NORTH AMERICAN PROVINCES.

The trade of the United States on the northern frontier with Canada, and on the North Atlantic coast with the British provinces other than Canada, is very closely connected with the internal trade in many respects. The exchanges between the east and the west, to and from United States markets, in many cases pass through Canada, as the transit tonnage of the Welland canal shows. Great quantities of wheat, flour, and other produce enter Canada at Detroit, to return again to the United States at Buffalo and Oswego, and also for export to foreign countries and European markets through the St. Lawrence, and over the railroad line to Portland, Maine. The technical exports and imports of the United States to and from Canada are, for these reasons, much modified when reduced to the facts of actual exchange between the respective markets; but it is not easy to separate the quantities and values so as clearly to disclose these facts, but some evidence in regard to the magnitude of this indirect trade may be obtained from the statistics subsequently given of American produce exported by way of the St. Lawrence; of that carried in both directions on the Welland canal; of the exports to Canada at Detroit, and the imports from Canada at Buffalo, Niagara, Oswego, Ogdensburg, and Cape Vincent, on the St. Lawrence, Champlain, and Vermont.

The trade with the British Atlantic provinces is less subject to modification, and has little connexion with the internal exchanges of the United States. The

exports are principally flour, breadstuffs, and provisions, and the imports are coal, fish, oats, stone, and lumber. In the fiscal year ending June 30, 1855, no less than \$1,280,000 in value of flour, grain, and other produce of Canada, was exported through United States ports to these provinces—a trade which was large for several years, but which ceased in 1859.

*Exports of Canadian produce through the United States to other British provinces.*

In view of the length of time during which the St. Lawrence river is annually closed by ice, and the great facilities afforded by the railroads leading from Canada to Portland, Maine, this channel of exchanges between the provinces and Canada might reasonably be relied upon as a permanent one. Possibly the discontinuance is due to the relative excess of breadstuffs in the United States, and their export in such quantities as fully to occupy the market the Atlantic provinces afford. The exports of wheat, flour, and breadstuffs average more than half the total of United States produce sent to the provinces annually, rising to more than five millions of dollars in value in the year ending June 30, 1863. This trade is evidently for consumption only, and not in transit to any other market, as is the case with much of the wheat and flour export to Canada. It is also all cleared from ports of the Atlantic coast, and does not pass through Canadian channels.

The important relation held by both Canada and the provinces to the export trade in breadstuffs of the United States, and the connexion the trade in them to Canada has with the general internal exchanges of the United States, as before referred to, requires a statement of their quantities and values at the outset of the statistics of general trade on the northern frontier. The export to the provinces is seen to be in the regular and natural increase belonging to a consuming market, while that to Canada is irregular, apparently bearing no relation to any consumption in Canada. Probably the very large export of Indian corn was, however, for consumption in the form of distillation, and is therefore an exception. As an illustration of the trade appearing to exist to and from Canada in wheat and flour, but which is in fact to a great extent a transit trade, the following citations of the transactions of the fiscal years ending June 30, 1861 and 1862, are made:

In the Canadian trade reports for 1855 it is stated that the trade in flour of the United States was, previous to the reciprocity treaty of 1854, mainly for exportation. Not being entered for consumption, it was bonded, and paid no actual duty.

The detail of imports for 1861 is not given, because it is imperfect, wheat not being distinguished in returns from other grain, and therefore that item not being available for comparison. That for 1863, following, sustains the course of trade apparent in the two previous years:

*Exports to Canada, 1863.*

*Summary of values exchanged, 1862 and 1863.*

	Value of wheat and flour to Canada.	Value of wheat and flour from Canada.
1862.....	\$3,914, 203	\$6, 808, 684
1863.....	7, 138, 564	3, 180, 698

It is known that considerable shipments of wheat from Chicago and Milwaukee, in 1863, though cleared for Canada, were really destined for export through the St. Lawrence to Europe. In the Canadian trade reports the value of "goods in transitu from the United States," exported seaward by the way of the St. Lawrence annually, is given, but this is not necessarily distinctive of the produce of the United States actually taking that route to other foreign markets. Flour made in Canada of American wheat may be exported, and even grain, passing in and out without payment of duty, may first be placed in Canadian markets, and again be withdrawn for export abroad.

In the tables just given, showing the exchange of wheat and flour for three years, it will be seen that the largest values are of wheat exported and of flour imported. All the exports are at ports west of Buffalo, and all the imports at Buffalo and eastward. The railroad lines terminating at Buffalo, Niagara, and Vermont, carry large quantities of flour, much of it made in Canada from wheat of the United States imported from the upper lake ports. In any case, the volume imported at all the ports of the border does not differ much from the volume exported; the trade, therefore, being one of convenience in transit, rather than one between producing and consuming markets, so far as wheat and flour are concerned. The modification of the aggregates exchanged between the United States and Canada is, therefore, for the three years, nearly five and a quarter millions of dollars reduction on both exports and imports, or ten and a half millions in the sum total of exchanges for each year.

There are other elements of the trade to Canada in which the movement is similarly indirect, in comparison with other departments of foreign commerce, but none of them are of much importance. The export trade to Canada has undergone many changes since the enactment of the reciprocity treaty, in 1854, the chief of which is the decline of manufactured articles, and the swelling of the general volume with wheat, flour, corn, pork, and salt. In the following tables the exchange of these articles is distinguished, as far as may be done, by the aid of both the American and Canadian records, and separate statements are made of the imports and exports of articles made free of duty by the reciprocity treaty.

The distinction between Canada and the provinces was not made in the export or import returns of the United States previous to 1849, but as the trade with Canada was conducted solely at ports of the northern frontier inland, and that with the coast provinces wholly at Atlantic ports, the compilation has been completed by assuming this division as correct. All the statistics of the trade under the reciprocity treaty were originally reported without separating Canada from the remaining provinces, and the division of values has necessarily been made on the basis just named. In a very few instances small values may have gone from Canada out at the St. Lawrence to enter at Atlantic ports, and similar instances of articles sent from the provinces of the coast inland may have taken place, but the total of such trade in either case would be very small for any single year, or for the aggregate of the series of years.

*Exports to Canada.*

\*Entered as grain of all kinds, not distinguishing between wheat, oats, and barley. In reality most of it is wheat.

Entered as grain of all kinds, not distinguishing between wheat, oats, and barley. In nearly most of it is wheat.

† In this and subsequent years an estimate is made of oats, or of other grain than wheat, by taking the totals at Vermont, Champlain, and Ogdensburg as oats, and all other as wheat.

General table of imports from the Provinces, other than Canada, free of duty under the reciprocity treaty.

## ANALYSIS OF THE FOREGOING TABLES.

The first general tables given above show an average export trade to Canada of \$16,826,797 for eight fiscal years following the enactment of the reciprocity treaty, of which \$13,493,739 was the value of domestic produce, and \$3,333,058 was the value of foreign goods. There is no marked increase in the exports at the beginning of this period of eight years, the total for 1854 being above the average of the succeeding years, including an unusual export of \$3,500,000 of gold coin in 1863. The average for the last four years is \$12,933,000 in value of domestic produce exported, against an average of \$14,300,000 for the four previous years, which were the first of the full operation of the treaty. The general volume of domestic export trade to Canada has, therefore, declined under its operation.

The foreign exports show a marked decline during the eight years, falling off from \$6,790,333 in 1854, and \$8,769,580 in 1855, to \$1,560,397 in 1862, and \$1,468,113 in 1863. It is obvious that the Canadian supply of foreign goods is no longer purchased in the importing cities of the United States, as before the

treaty; and the statistics of goods entering Canada, through the United States, under bond, show that to be the mode of receipt substituted for the former. These bonded goods nearly all enter at Portland, and pass over the railroads through Vermont.

Of the exports to Canada, both domestic produce and foreign merchandise, the United States records give no distinction as to those which pay duty and those received free of duty; but the Canadian official tables show that for eight calendar years to 1862, an average of \$9,335,865 of these exports paid duty, while an average of \$10,720,000 was admitted free of duty. As the record in this case is for calendar years, the annual values cannot be exactly compared with those made up for our fiscal years. The Canadian values are larger generally—a fact to be accounted for by their more rigid inspection of imports than ours of exports, and by the valuation they make of “settlers’ goods,” “vehicles in use,” and a large class of personal effects not usually cleared at our custom-houses.

The imports from Canada show an average value of \$16,643,825 for the last eight fiscal years, of which an average of \$467,238 only paid duty on entering the United States. The average sum of \$16,176,337 entered free of duty, of which \$14,443,000 was under the reciprocity treaty, and \$1,732,725 was free under other laws. The following are the values admitted free to each country, respectively, contrasted for each year:

*Paying duty in Canada.*

Calendar years.	Amount.
1855 .....	\$11,449,472
1856 .....	12,770,923
1857 .....	9,966,430
1858 .....	8,473,607
1859 .....	9,032,861
1860 .....	8,526,230
1861 .....	8,338,620
1862 .....	6,128,783
1863 .....	3,974,396
Average of 8 years .....	<u><u>8,401,481</u></u>

*Paying duty in the United States.*

Fiscal years.	Amount.
1854-'55 .....	\$5,305,818
1855-'56 .....	640,375
1856-'57 .....	691,097
1857-'58 .....	313,953
1858-'59 .....	504,969
1859-'60 .....	434,532
1860-'61 .....	358,240
1861-'62 .....	227,059
1862-'63 .....	567,677
Average of 8 years .....	<u><u>467,238</u></u>

Under the reciprocity treaty, therefore, duty is paid on goods of the United States entering Canada of the average annual value of \$7,934,241 more than the values of duty-paying goods entering the United States from Canada.

The respective values made free by the reciprocity treaty were, from 1856 to 1861, nearly twice as great from Canada, or of Canadian produce, as from the United States, or of United States produce. In 1862 and 1863, in consequence of the enormous increase in the shipments of wheat, flour, and grain nominally to Canada, but really through Canada to other markets, the values became nearly equal.

*Reciprocity imports into Canada from the United States.*

Calendar years.	Amount.
1856 .....	\$8,082,820
1857 .....	8,642,044
1858 .....	5,564,615
1859 .....	7,106,116
1860 .....	7,069,098
1861 .....	9,980,937
1862 .....	14,430,626
1863 .....	12,339,367
Total, 8 years .....	73,215,623

*Reciprocity imports into the United States from Canada.*

Fiscal years.	Amount.
1855-'56 .....	\$15,959,850
1856-'57 .....	16,731,984
1857-'58 .....	10,900,168
1858-'59 .....	12,307,371
1859-'60 .....	16,218,767
1860-'61 .....	16,327,824
1861-'62 .....	14,295,562
1862-'63 .....	12,807,354
Total, 8 years .....	115,548,880

The treaty has, therefore, released from duty a total sum of \$42,333,257 in value of goods of Canada more than of goods the produce of the United States. The decline in value of American and foreign goods paying duty on entering Canada from the United States, in 1862 and 1863, is due to the decline of trade in all fabrics and manufactures, not to any change in the proportions of free and dutiable, through which our exports are relieved from taxation.

CANADIAN OFFICIAL STATISTICS, WITH DETAILED TABLES OF EXPORTS TO CANADA.

As the distinction between goods entering Canada free and dutiable cannot be derived from the United States returns, the following table is limited to three years, and the Canadian statistics are taken complete for the illustration of that side of the trade. These tables are very full and valuable, furnishing a clear illustration of the character of that trade as it enters Canadian markets.

The Canadian tables that here follow are general tables corresponding to those before given from United States records, and these, with various tables cited elsewhere, are all taken from the annual volumes on the Trade and Navigation of Canada, published by that government.

*Statement of the value of the imports into Canada from the United States for 14 years, from 1850 to 1863 inclusive, with amount of duties paid.*

[From Canadian official reports.]

Calendar years.	Value of free goods.	Value of duty-paying goods.	Total imports.	Amount of duties paid.	Rate per cent.
1850.....	\$791, 128	\$5, 803, 732	\$6, 594, 860	\$1, 069, 814	18. 43

The detail of imports from Canada which pay duty during the period of the reciprocity treaty shows that very few of such imports are the produce or manufacture of Canada originally. The chief articles are iron, salt, foreign spirits and wines, beer and ale, and foreign dry goods. It is not easy to identify any item of consequence produced in Canada, other than "manufactures of wood," which is an item made up of local products in part, at least.

The detail of imports free by ordinary laws exhibits a very irregular trade of this sort. The chief values are of articles of the United States brought back, personal effects, and unusual movements of coin and bullion.

\* Including 9,410 pounds indigo, \$8,428.

† Including 13,766 pounds tea, \$10,247; 20,763 pounds indigo, \$14,429.

The detail of imports from the Provinces other than Canada, free by other laws than the treaty, is also shown to be mainly of United States produce returned and specie in small amount. The following are the items:

Years.	Specie.	Produce of U. S. returned.	Gypsum.	Animals living.	Other articles.
1854-'55.....		\$14,651	\$103,226	\$375	\$28,175

1862-'63.....	5,542	92,257	20,093		10,500

The import trade from the British Atlantic provinces is very small in actually free articles other than those affected by the reciprocity treaty. On the Pacific coast there is a receipt of bullion from Victoria at San Francisco, the value of which is given in the published commerce and navigation reports as imports from British North American provinces. It has been separated from the above statement, though in other statements of trade with the provinces the small trade of San Francisco with British Columbia in duty-paying articles has not been separated. The bullion brought to San Francisco from British Columbia began in 1859, and was, in 1861-'62, \$756,423, and in 1862-'63, \$1,663,642.

The record of imports and exports at United States ports of the lake district almost invariably confines the transactions to Canada, the exceptions being only one outward shipment from Milwaukee to England in 1861, value \$46,061, and one similar shipment in 1863, value \$3,381. It has therefore been necessary to consider all the trade of the lake district as conducted with Canada, although the registered entries and clearances of vessels show frequent transactions direct with English ports. The following is the detail of actual entrances and clearances at these lake ports for European ports, through the St. Lawrence, from the official returns:

Fiscal years.	No.	Clearances.	Tons.	No.	Entrances.	Tons.
1855-'56 .....						
1856-'57 .....	1	Chicago to England.....	379			
1857-'58 .....	1	Chicago to England.....	123	1	England to Chicago....	123
	9	Cleveland to England.....	3,244	1	England to Cleveland..	332
	3	Detroit to England.....	987	1	England to Detroit....	382
1858-'59 .....	16	Chicago, Detroit, and Cleveland to England....	5,761	7	England to same ports.	2,401
	2	Same ports to Hamburg..	633			
	1	Same ports to Spain.....	343			
1859-'60 .....	5	To England and Scotl'd..	1,436	10	From England .....	3,575
1860-'61 .....	5	To England and Ireland..	1,791	8	From England .....	2,836
1861-'62 .....				3	From England .....	1,168
1862-'63 .....	1	To England.....	394	1	From England .....	394

Undoubtedly the outward shipments by these vessels were considerable, and a few imports are specified in the statistics of soda ash, iron, salt, &c. But the trade is not a permanent one in any sense. In the last fiscal year but a single vessel cleared and entered, and it can therefore scarcely be necessary to make a distinct and precise account of it as of a permanent trade. This practical neglect of the St. Lawrence river as an outlet to western produce of the United States, under the circumstances controlling that route for the last four or five years, is particularly significant, and decisive as to the channels this trade prefers. Not only the treaty of reciprocity, but the careful and inviting legislation of Canada in regard to tolls and tonnage duties, have united to remove all obstacles to the free employment of this route for the export of broadstuffs and provisions from the western States. Great hopes were entertained in Canada of the commerce that would be thus developed, but the united efforts of the two governments have proved of little effect in opening a channel preferable to that made up of the lakes, the canals, and railroads of the United States. The statistics of downward freight through the Welland canal show that most American produce entering that canal returns again to American ports. The tables of this Welland canal tonnage, given here from the official Canadian reports, are particularly instructive on the point of the destination of both upward and downward freight.

The following extracts from the report of the Hon. W. P. Howland, finance minister of Canada in 1862, state very compactly and forcibly the principal facts connected with the expected occupation of the St. Lawrence river as a line of outward transit for produce of the western States. They are from the Canadian Trade and Navigation report for 1862:

*Movement of American produce in and through Canada.*

The movement of property on the provincial canals shows a steady increase. On the Welland canal the movement was:

	Tons property.	Tonnage of vessels.
In 1859 .....	709,611	856,918
1860 .....	944,084	1,238,509
1861 .....	1,020,483	1,327,672
1862 .....	1,243,774	1,476,842

And on the St. Lawrence canals the movement was:

In 1859 .....	631,769	765,636
1860 .....	733,596	824,465
1861 .....	886,908	1,009,469
1862 .....	964,394	1,019,230

The movement on the Welland canal has, therefore, increased  $7\frac{1}{2}$  per cent. in 1861 over 1860, and in 1862 15 per cent. over 1861. Whilst on the St. Lawrence canals the movement of tonnage has increased in 1861 by 22 per cent. over 1860, and in 1862 by 6 per cent. over 1861.

In this connection I propose to consider the effect which the removal of the tolls from the St. Lawrence canals, and the reduction of those on the Welland, has had on the movement of property through those works.

That the movement of property by the St. Lawrence route has been greatly augmented during the past three years is sufficiently apparent from the figures above given, and we may congratulate the country thereon; but that this increase has been due to the remission of the tolls is not to be assumed without taking into account other circumstances which have mainly influenced the direction of trade.

First among these circumstances may be stated the greatly increased production of cereals in the western States, and the figures presently introduced will show that in proportion to that increase, and to the whole volume of agricultural produce moved from Lakes Erie and Michigan to tide-water, we have not obtained so large a traffic since the removal of the tolls as we obtained prior to the adoption of that policy.

The following statement shows the quantity of grain sent eastward from the lake regions, including Canada, during the last seven years :

Years.	Flour.	Wheat.	Corn.	Other grain.	All reduced to bushels.
	<i>Barrels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	
1856 .....	3 865, 442	19, 505, 358	14, 232, 632	4, 592, 569	57, 707, 769
1857 .....	3, 397, 954	16, 763, 285	8, 779, 832	2, 256, 944	44, 789, 851
1858 .....	4, 499, 613	21, 843, 859	10, 495, 554	5, 035, 097	59, 872, 566
1859 .....	3, 760, 274	16, 865, 708	4, 423, 006	4, 264, 051	44, 354, 225
1860 .....	4, 106, 057	32, 334, 391	18, 075, 778	7, 712, 032	78, 652, 486
1861 .....	6, 533, 869	46, 334, 144	29, 524, 628	10, 636, 115	119, 264, 233
1862 .....	8, 359, 910	50, 699, 130	32, 985, 923	10, 844, 939	136, 329, 542

The following statement shows the proportion of wheat and flour which has passed from the western States to tide-water by the St. Lawrence and Erie canals, respectively, during the same period, (all being reduced to bushels of wheat.)

*Movement of American breadstuffs.*

Years.	Down the St. Lawrence.	Through Erie canal.	Total to tide-water.
1856 .....	1, 209, 612	15, 342, 833	16, 553, 445
1857 .....	1, 930, 280	10, 601, 532	12, 531, 812
1858 .....	1, 876, 933	13, 757, 283	15, 634, 216
1859 .....	1, 938, 759	10, 371, 966	12, 360, 725
1860 .....	1, 846, 462	23, 912, 000	25, 758, 462
1861 .....	3, 103, 153	34, 427, 800	37, 530, 953
1862 .....	5, 320, 054	39, 240, 131	44, 560, 185

NOTE.—The above statement is computed by adding to the importations from United States ports, at Kingston, the quantities sent down the St. Lawrence canals from the United States to the Canadian ports, and it is assumed that all the imports at Kingston were sent down the St. Lawrence canals. The movement on the Erie canal during the first six years is taken from the canal auditors reports; that for 1862 is from "Hunt's Merchants Magazine." The statement relates only to wheat and flour.

Hence it appears that of the whole quantity of western wheat and flour which was transported to tide-water through the New York and Canadian canals during the past seven years, we obtained for the St. Lawrence route, in 1856, 7.3 per cent.; 1857, 15.4 per cent.; 1858, 12.01 per cent.; 1859, 16.08 per cent.; 1860, 7.16 per cent.; 1861, 8.26 per cent.; 1862, 11.4 per cent.

These are the principal commodities which have heretofore passed through the St. Lawrence canal. If we include with them the Indian corn, which figures so largely in the Welland and Erie canal returns, the percentage will become still less favorable to us, and the proportions will be still further reduced by bringing into the comparison the cereal products of the western States which are carried to tide-water by the several railroads converging at the Atlantic ports.

While we have failed to obtain so large a proportion of the western trade, since the removal of the tolls, as we obtained in 1859 and the preceding years, the tolls levied on that (the Erie) canal which is the chief competitor with the St. Lawrence route have been materially increased, as the following comparison of tolls on the three principal articles will show:

Toll per 1,000 pounds per mile.	1860 and previous years.	1862.
On corn.....	2 mills.	2½ mills.
On flour.....	2 “	3 “
On wheat.....	2 “	3 “

This increase is equivalent to an advance of seventy cents per ton on wheat and flour from Buffalo to tide-water, and of forty cents per ton from Oswego to tide-water; whilst the advance on corn is equivalent to thirty-five cents per ton from Buffalo, and to twenty cents per ton from Oswego.

The rates of freight have also increased by the Erie canal, and they have increased in a still greater ratio by the St. Lawrence. During the four years next preceding 1859 the average freight for flour from Lake Ontario ports to Montreal was \$1 84½ per ton. In 1860, the year in which the tolls were removed from the St. Lawrence canals, the rate of freight was \$2 11½ per ton; in 1861 it was \$2 56½; in 1862 it was \$2 61; so that the increase over the average of the four years preceding 1859 was seventy-two cents in 1860, seventy-two in 1861, and eighty-one in 1862. If we add to these figures the tolls remitted, we find that the forwarder received over the average rates which they obtained in the four years above alluded to, in 1860, forty-nine cents per ton; in 1861, ninety-four cents, and in 1862, one dollar and three cents per ton, together with the tolls on the tonnage of his shipping.

Comparing in a similar manner the rates of freight obtained for carrying wheat, we have a still more striking example of the advanced rates which the forwarders have been able to exact. The average freight rates for wheat from Lake Ontario ports to Montreal, in 1855, 1856, 1857, and 1858, was \$1 81 per ton; in 1860, \$1 21; in 1861, \$2 72, and in 1862 it was \$2 71 per ton. Thus the advance over the average rate during the four years first named was, in 1860, \$1 21; in 1861, \$1 13; in 1862, \$1 13. Adding the tolls relinquished by the province, it will be seen that the advance obtained by the forwarder has been, in 1860, \$1 43, and in 1861 and 1862, \$1 35 per ton, together with the tolls due to the tonnage of his vessels.

Whatever else may be urged in favor of free canals, it certainly cannot be said that the policy of 1860 has been productive of benefit, either to the producer or consumer of western breadstuffs; and from the advance which has taken place in the freights by the St. Lawrence route, as well as in both tolls and freight by the competing route to tide-water at Albany, it is abundantly manifest that the forwarder can pay a moderate toll without unduly trenching on his profits.

It can be shown from reliable data that, in so far as the actual cost of transportation (including therein the canal tolls recently imposed) is concerned, western produce can be carried to tide-water much cheaper by the St. Lawrence than by any competing route; and we must trace our failure to obtain for our canals a greater proportion of the western trade to other causes than the charges heretofore imposed for the use of those works. I am persuaded that the chief cause of that failure lies in the absence of sufficient competition among forwarders engaged in the St. Lawrence trade; in the financial relations between shippers engaged in the western trade and the capitalists of New York; and, finally and chiefly, in the lower rates of ocean freights from New York to Europe, occasioned by the greater competition at that port than is to be found at Quebec or Montreal. It is gratifying to know that the Canadian forwarder has been able to obtain the advanced rates above quoted, but we cannot find therein a justification of that policy which, in addition to other advantages, would give him the free use of costly works which complete the grandest system of inland navigation in the world, and have not been constructed without imposing heavy burdens on the country. If it could be shown that the tolls remitted had gone in mitigation of the comparatively high rate of ocean freight to which our trade is subject, we might find in that fact some reason for making our canals absolutely free. But it has been shown that this has not been the result. The tolls have gone to enhance the profits of the forwarder whose freight tariff has been regulated, not by the cost of doing his work,

but by the competition with which he has had to contend. There is but one course open for securing that quota of the western trade which the advantages of the St. Lawrence route gives us reason to anticipate. If we can give to the owners of the largest vessels now profitably engaged in the trade of Lake Michigan the option of trading to Kingston and the St. Lawrence, or to Buffalo, as may be found most profitable, we shall have thrown down the barrier which now forces the main current of trade into the Erie canal. We shall have more than balanced the greater insurance and freights charged from our sea-ports to Europe over the corresponding charges from New York, and we may thereafter expect Quebec and Montreal to take rank amongst the greatest grain marts of this continent. All of which is respectfully submitted.

W. P. HOWLAND, *Minister of Finance.*

QUEBEC, May 12, 1862.

This very full and impartial statement has been copied at length because of its decisive bearing on the question which was, a few years since, considered a great and practical one for the western producing States, namely: whether they were to anticipate relief to the pressure of their export trade when the St. Lawrence should be fully opened to them.

The transit trade through Canada, inward and outward, by way of the St. Lawrence, is incompletely given in the Canadian trade reports, as follows:

*Statement of the transit trade through Canada, via the St. Lawrence, to and from the United States.*

[From Canadian authorities.]

Calendar years.	Values to the U. States.	Values from the U. States.
1854.....	\$495,327	.....
1855.....	18,015	.....
1856.....	13,493	.....
1857.....	183,790	.....
1858.....	26,916	.....
1859.....	76,314	.....
1860.....	21,505	.....
1861.....	522,514	\$3,505,511
1862.....	490,293	5,198,920
1863.....	512,245	2,997,818

The transit trade through the United States to Canada is another important element of the mutual exchanges, one of which the volume is unexpectedly large, larger than the export of United States produce by way of the St. Lawrence. It is conducted almost wholly over the railroads leading from Portland, Maine, to the frontier of Vermont, and makes up the larger half of the business of the sub-port of entry of Island Pond, Vermont.

*Value of imports into Canada passing through the United States under bond.*

1855.....	\$4,463,774
1856.....	4,926,922
1857.....	5,582,643
1858.....	2,057,024
1859.....	4,546,491
1860.....	3,041,877
1861.....	5,688,952
1862.....	5,508,427
1863.....	6,172,483

The rapid increase of this traffic is remarkable. It affords a channel for steamer freight that appears to be preferred to the slower course by way of the St. Lawrence. The comparison of the use by Canada of the two channels of imports is as follows: showing that more than a third of the import trade of Canada enters now at United States ports, and is transported over our railroads under bond.

	Imports <i>via</i> United States	Imports <i>via</i> St. Lawrence.
1855.....	\$4, 463, 774.....	\$12, 738, 373
1856.....	4, 926, 922.....	16, 989, 513
1857.....	5, 582, 643.....	14, 378, 094
1858.....	2, 057, 024.....	10, 768, 161
1859.....	4, 546, 491.....	11, 472, 754
1860.....	3, 041, 877.....	13, 527, 160
1861.....	5, 688, 952.....	16, 726, 541
1862.....	5, 508, 427.....	17, 601, 019
1863.....	6, 172, 483.....	16, 439, 930

Evidently the advantages of unrestricted transit to and from sea are quite as valuable to the business of Canada as to that of the United States. The preponderance of steamship traffic in the carriage of all classes of merchandise is increasing the transportation of railroad lines such as these from Portland and Boston to Canada.

#### EXPORT OF UNITED STATES MANUFACTURES TO CANADA.

The reduction in the value of manufactured articles of the United States exported to Canada in recent years as compared with an earlier period has been referred to. In the following table the extent of this reduction and its relation to particular articles is shown, the comparison being for the years 1853 to 1863. Undoubtedly this decline cannot be a natural result between two countries in such proximity maintaining open and equal commercial relations. Especial causes only could produce such a decline in the face of the very great increase of manufactures in the United States during these years, and their development in superior fabrics of every sort. The Canadian tariffs are chiefly levied *ad valorem* on the invoice values of goods at the point of purchase for importation into Canada, whether that be in the United States or in Europe, and the consequence is a practical difference against purchasing in the United States which increases with every accession to prices here, and has now attained to the full nominal measure of the duty levied. The increase in the price of fabrics, caused by the successive tariff acts of the United States and by the internal duties levied, has steadily increased this difference, in connection with the higher rates of *ad valorem* duty levied in Canada, until it now amounts very nearly to a prohibition of purchases in the United States of duty-paying articles. A duty of twenty per cent. on invoices made in England, can scarcely fail now to amount to two such percentages when the same or similar goods are purchased in the United States, simply through the duplication of prices attained here.

Efforts have been made in Canada to obviate the difficulty in some measure by admitting United States invoices at a reduction to gold values, but nothing has been settled on. While these conditions continue, the trade to Canada in articles not covered by the reciprocity treaty, or otherwise free, will remain very small, and that market for manufactures will practically cease to exist.

*Values of manufactured articles of the United States exported to Canada, and paying duty.*

The exports of prepared provisions, being nearly all free of duty, are fairly maintained. That of liquors has nearly ceased, and an enormous stimulus has been given to distillation in Canada of corn imported free from the United States.

The export of wheat and flour to the coast provinces has been referred to as a large and direct trade to a market for consumption. It constituted the chief part of the export trade previous to the enactment of the reciprocity treaty, breadstuffs having always been admitted free of duty into the colonial ports of the Atlantic coast.

*Exports of wheat, flour, corn, and meal from the United States to the Provinces, other than Canada, from 1849 to 1863.*

The fisheries of the coast provinces constitute a large natural market for provisions and breadstuffs which can never be supplied so cheaply from Canada as from the United States. The average imports from them are scarcely half the exports, as will be seen by comparing the annual totals of trade with the provinces, and but a very small proportion of these imports pay duty on entering the United States. The average annual value paying duty is \$216,172, for the eight years of the operation of the treaty, while for the five years preceding, the average paying duty was \$1,750,000.

*Table of trade through the Canadian canals in produce of the United States, distinguishing the points of origin and destination, for the years 1861, 1862, and 1863.*

## CANADIAN FREE PORTS.

By an act of the Canadian legislature which went into operation November 30, 1860, the harbor and district of Gaspé Basin, in the Gulf of St. Lawrence, was constituted a free port into which goods of every description might be imported, either for consumption or for re-exportation, without the payment of duties. An extended line of coast was embraced in this district, with Anticosti island and the Magdalen islands, the whole area of territory being quite large, but the number of inhabitants small. The district itself is incapable of much development, and the consequences as to making it a depot of trade for re-export do not appear to be important. It is mainly used as a point of outward shipment of fish and lumber, and of importation of spirits, groceries, and manufactured goods. These imports are not, however, apparently much beyond the consumption of the islands and fisheries of the vicinity. The countries from which they come are evidently transatlantic mainly, and not in great proportion from the United States. Whatever may be the advantages conferred on the fisheries and local interests of the vicinity, there does not appear to be any general importance attaching to the establishment of this as a free port.

*Imports at the port of Gaspé from countries other than Canada.*

A second and more important free port, as regards the commerce of the United States, was at the same time established at Sault Ste. Marie, and embracing the whole Canadian coast of Lake Superior and Lake Huron. The district has 400 miles of lake coast, and the adjacent islands are also included. Very little practical importance has resulted from the opening of this port up to the close of 1863; but its proximity to a rapidly developing country on both sides of the boundary indicates that it will interfere materially with the commerce of other districts should it continue a free port. The following were the imports for the three years of its establishment; but it is impossible to say what proportion was from the United States:

*Imports into Sault Ste. Marie from British and foreign ports.*

The trade of this port or district is evidently limited altogether to the local consumption and production of the few inhabitants at present occupying it. Its exports of copper and copper ore are the chief productions, and are three times the value of its imports.

The trade of the same port with Canada is very small, the imports and exports being in—

	Imports.	Exports.
1861.....	\$39, 179	\$95
1862.....	41, 743	74
1863.....	57, 199	253

The chief product, copper and copper ore, comes to the United States.

## INTERNAL OR DOMESTIC COMMERCE

BETWEEN THE

## MISSISSIPPI VALLEY AND THE ATLANTIC STATES.

## DATA—TREATMENT—GENERAL RESULTS.

In the division of this report relating to internal commerce it is assumed that the exchanges conducted within the limits of the United States have attained to a magnitude entitling them to the designation of commerce in the broadest and fullest sense of the term, and to the care and regard of the national authorities as commerce is with foreign countries.

Though these exchanges pass through no official record of valuation it is still assumed that the statistics of the transportation lines afford the basis of a reasonably close approximation to a calculation of their value.

It is assumed that the carriage of produce or manufactures the average distance of three hundred miles from the producing point to the market of consumption, entitles such quantities and values to be ranked with the general mass of exchanges defined as internal commerce. This is limited, however, to transportation east and west, since that, more definitely than in other directions, represents natural movements from producers to consumers.

As a measure of this exchange between the east and the west, all quantities are taken which pass the line of the Alleghanies in either direction, including the extension of their line, or meridian, through Upper Canada. And an addition is made to the quantities reported as carried in through freight across this line, of one-half the way freight of the five great carriers eastward of the Alleghanies to tide-water. These carriers are the Erie canal, the New York Central and Erie railroads, the Pennsylvania railroad, and the Baltimore and Ohio railroad.

Assigning values to the quantities so taken, which are the quantities and market values of 1862, it is found that the aggregate value of westward commerce in that year, including the deliveries of merchandise of all classes at a distance of 300 miles from the Atlantic seaboard, was nearly the sum of \$616,000,000; and that the return freight, eastward, of inland produce and merchandise passing the line of the Alleghanies, attained the value of \$522,000,000. The total trade is, therefore, \$1,138,000,000.

As a general check on the calculation, it is estimated that a population of ten millions west of the Alleghanies is supplied with most of its merchandise by this westward carriage, and that they have taken, under circumstances of unusual activity and ability to supply themselves, fifty dollars in value each of all classes of articles and representatives of value.

To represent this internal movement in such manner that an independent judgment may be formed of it by every one, the statistics of quantities transported in both directions are given in condensed form from the reports of the various transportation authorities, yet with enough detail to show precisely what the exchange is.

The commerce of the lakes is stated in the fullest manner from the trade reports of the cities on its borders. Their immense fleet of vessels, with the recent increase and present tonnage; the lines of propellers of recent establishment, and their railroad connections in transit and at the east, with the

statistics of shipment at western ports and of receipt at eastern terminal points, are embodied very fully. Calculations of value based on the quantities identified in this way, appear to sustain the calculations applied directly to the tonnage of the great roads and the Erie canal which complete the transportation from the west.

The receipts and shipments of all leading articles of produce are given at the chief ports and cities of the lake district, including Toronto and Montreal, in Canada.

The data used relate mainly to the year 1862. No earlier year is taken to represent our internal or domestic commerce proper; because, before the rebellion the import and export trade of the United States to a considerable extent traversed the southern ports; because it was a full year, but not excessive; and because in that year there was a very complete severance of the domestic commerce of the north from that of the south and from the foreign. The occasional comparisons with other years are made for specific and subordinate purposes.

The "year" intended in this division is the calendar; and the values are at the prices ruling in 1862, before any extraordinary rise had taken place.

#### INTERNAL OR DOMESTIC COMMERCE.

The extent of the territory of the United States is so great, and the diversity of production in its various parts so much beyond the ordinary diversity belonging to any single or continental government, that the exchanges conducted within its limits rise to the full measure of importance which belongs to commerce in its general sense. The articles exchanged are carried to great distances, and they are of the natural surplus of the districts from which they are taken, supplying a natural want in the districts to which they are carried. Subtropical staples are exchanged for the field crops and forest products of the coolest belt of the temperate latitudes in one direction; and in another the extremes of maritime and of continental interior climates are exchanged. Trade of this comprehensive character must be regarded as permanent, and as entitled to rank next to the highest in national interest and importance. If possible, it should be as regularly stated and as definitely known through authentic statistics, as the external trade of the country in imports and exports is known.

Russia alone, of European states, conducts a trade analogous to that of the United States between its various districts. Great efforts have at all times been made by that government to foster and encourage those inland exchanges, and much of the strength and of the display of accumulated resources which occasions have at various times developed in Russia, may undoubtedly be ascribed to its command of the products of an entire continental zone, and to its constant, though almost silent, interchange of these products from all points within the widely separated coasts that constitute its boundary. The other European states exchange very largely with their colonies, and almost wholly by sea; the statistics of this trade being regularly given as a branch of their foreign commerce. Strike from the commerce of England, France, Spain, and Holland, the trade they conduct with their own colonies, near and remote, and the volume would be greatly reduced. During the last twenty years the development of the interior of this continent, and of the new territorial area of the United States, has drawn a large share of the means, the energy, and activity which in European states finds its proper field of activity in foreign commerce, to the hitherto unnoted trade of the plains, the interior, and the Pacific coast. The district of the great lakes is alone a vast field for this display of commercial energy, and the Mississippi valley has long constituted another, and almost equal field. The railroad system connecting the Atlantic cities with the interior has recently developed the same general character, and has risen to gigantic importance as an agent in actual exchanges of merchandise. The tonnage movement of the great railroads from the interior eastward to the Atlantic cities in 1863

was little, if at all, inferior to the tonnage delivered by transatlantic shipping arriving at the ports of the entire Atlantic coast. The railroad freight tonnage reached a total of nearly 3,500,000 tons, and deducting from the shipping arrivals of the Atlantic ports a small proportion for that which came from American ports north or south of the United States in transit to Europe, the total remaining does not largely exceed the amount just stated.\*

The difficulty of assigning definite quantities and values to these internal exchanges is great, since there is no uniform system of record through which they pass. The railroads and canals are, with one exception, private corporations; and though they usually report with great fullness the quantities of the leading articles transported, values are given only in the case of the New York State canals. In many things these reports of the transportation companies are sufficiently full and clear for the purpose of calculating the values exchanged, and it is only necessary to institute a system of estimates, based on the known prices of leading articles. These are readily determined, and there appears no insuperable difficulty in making up calculated total values which will attain a reasonable approximation to accuracy. On the New York canals the precedent of estimating values per pound for freight of all kinds has been set for years in the official reports of the auditor general, and the results of such estimates have been accepted without question.

As a basis for the calculation, it is assumed that goods carried the distance of three hundred miles from the place of production to the place of consumption should be included in the account of domestic or internal commerce. Very large quantities of produce and of manufactured goods are carried much further than this in the United States, as in the very heavy shipments from New York and other Atlantic cities to Chicago, St. Louis, and other points on the Mississippi and Missouri rivers. Probably the assumption of three hundred miles as the minimum of distance would raise the average distance to five hundred miles, in consequence of the preponderance of freights of eight hundred to one thousand miles; so that it would be reasonable to assume two hundred miles as the minimum, and to include all transportation for this last-named distance in the general account. In regard to manufactured goods, domestic and foreign, sent westward, the average distance for those sent to the entire region west of the Alleghanies is little, if at all, short of eight hundred miles. The return trade eastward has a somewhat shorter line.

The calculation of values for this internal exchange must be made from the commercial statements voluntarily put forth by the transporting companies, or compiled by Boards of Trade for commercial information. These sources of information are much more abundant and uniform for the trade between the Atlantic coast and the interior, than for that between the northern and southern States, and along the Mississippi river and valley, north and south. The lines of transportation north and south are neither so regular nor so much pressed with constant business as those leading east and west. Vast as the freights were which were carried on the Mississippi, outward and inward, they were subject to great variations in successive years, and no trustworthy record of them has been preserved. At the east, the coasting trade was always the chief

---

\*The total tonnage entered in all the ports of the United States during the fiscal year ending June 30, 1863, was 7,255,076 tons. Deducting an aggregate of 3,050,369 tons arriving from Canada, (the larger share of which is mere ferry tonnage,) and also 273,635 tons arriving at San Francisco and other Pacific ports, there remain 3,931,072 tons as the total arriving from all quarters at all the Atlantic ports.

During the calendar year 1863 the Pennsylvania railroad delivered 704,171 tons at its eastern terminus, while in 1862 the New York Central delivered 1,064,128 tons, and the Erie 971,332 tons. Adding to the last two an advance of 15 per cent. reported in 1863 over 1862, and the three sum up 3,044,960 tons. Adding 500,000 tons for all other roads, the total exceeds 3,500,000 tons.

reliance for carriage, and this was also subject to great and irregular variations. No entrances or clearances of cargo being ever required, the best that can be done is to roughly estimate it by the tonnage capacity of the shipping through which it was conducted.

With the progress of the age in perfecting railroads, the contrast between land and water carriage has been steadily reduced to smaller and smaller proportions, until even the lakes and rivers lying in the direct line of east and west carriage have become merely the equals of the railroad lines. They are but portions of the general lines, and are preferred or rejected at intervals, according to the temporary exigencies of business.

The more important mass of this internal commerce is over the broad northern belt occupied by the great railroad lines, and in which the great lakes, the New York canals, and the Ohio river now only divide the transportation with these roads. All these cross a natural line of geographical division between the east and the west at the Alleghanies, and the continuation of their line from the point where they cease as mountains, due northward, across the Erie canal, the New York Central railroad, and the Canadian lines of transportation, may be taken as of the same geographical significance. There is no line equally well defined in any other part of the United States over which the entire volume of natural exchanges now passes between the two sections. The trade of the Mississippi river has been, and must always remain, much less definite, since an alternative is offered at each extremity for transportation by other modes of conveyance. The outlet for western produce to foreign tropical markets geographically near the mouth of the Mississippi, is now in many respects more convenient by lake and railroad first to the Atlantic coast, than by the most unrestricted use of the Mississippi and the New Orleans markets.

The calculation of transportation east and west may be simplified by taking the entire carriage of the great leading lines, and rejecting that of the subordinate lines. In the entire carriage of the Erie canal the trade passing over Lake Ontario is embraced. A small proportion of the lake trade, which has been estimated by the best Canadian authorities at not more than ten per cent., passes northward of Lake Ontario, or goes out at other ports or outlets than the New York canals, or by railroad to Portland, Maine. This proportion can be taken directly from Canadian statistics, or can be added simply as a percentage on the total values of the lake trade otherwise made up. As there are lateral roads and canals, as well as intermediate lake ports, which represent fragments of the general trade east and west, and which deliver or receive their freight at points on the great roads far along their line from either terminus, it is a necessary and just simplification to take the entire business of the great lines, and reject the smaller ones altogether, as has been said. Thus the New York and Erie road has tributary lines on the north connecting it with Buffalo, with Lake Ontario, and with the Hudson river; on the south it has a great tributary leading from Central Ohio; the business of all being conducted between markets really separated by an average distance not less than three hundred miles.

For the measure of the trade between the east and the west, therefore, it is proposed to take the entire freight carriage of the Baltimore and Ohio railroad, the Pennsylvania railroad, the Erie and Central railroads, in New York, the Erie canal, the Welland canal, and the Grand Trunk railroad of Canada; or to estimate for such transportation on these last named as properly belongs to the trade entering from the United States, and again returning, as has been stated above, viz: ten per cent. of the carriage of the Erie canal.

Before proceeding to give the statement of values so exchanged between the west and the east across the Alleghanies and their line continued northward, it may be proper to state at what other points this domestic commerce should be noted in order to obtain an adequate account of it. The coastwise trade of the Atlantic coast in part belongs to it, as does also the barge transportation

through the New Jersey canals, and through the Chesapeake and Delaware canal. But there are no railroad lines in the eastern States whose traffic would be included, beyond the amount which would be reached at the eastern extremities of the great lines before named. That which is local, or may be carried but fifty or one hundred miles on the eastern end of either of the great roads or canals, is again taken up by minor roads and carried to cities along the coast a distance sufficient to make up the distance assumed as the minimum. No eastern roads need, therefore, be taken into the account, if the entire movement on the great lines before named is considered.

The coastwise trade is, in ordinary times, made up of elements that may be estimated with a fair approximation to accuracy. The coal of Pennsylvania is carried coastwise to the extent of near one-fourth the annual production. The products of the fisheries are, to the extent of two-thirds their total in quantity and value, also carried in the coastwise trade, embracing in this calculation the produce of the whale fisheries. The lumber of the southern States is carried northward, that of the Susquehanna eastward, and that of the coast of Maine southward, each in quantities and proportions which may be estimated. Naval stores, rice, and cotton were carried from the planting States in large quantities, as they undoubtedly will be again. Grain and flour from the James river, the Chesapeake, and the coasts of Maryland and Delaware, have been carried to the eastern States in great quantities. Lastly, the manufactures and machinery produced in all the New England States, New York, Pennsylvania, New Jersey, Delaware, and Maryland, have been carried coastwise to the entire south, from the Delaware bay to Texas. The value of these manufactures has always been large; and though the trade is now greatly checked, it constitutes a traffic which will revive promptly, and will attain far greater proportions hereafter than it has at any previous time.

In the west there are at least three central points at which exchanges are conducted rising to the full dignity of commerce. Cincinnati is the first of these, as a point of exchange between the States north of the Ohio, and those producing many things essentially distinct south of the Ohio. The hemp and tobacco of Kentucky are not, however, fully noted in the statistics of trade at Cincinnati. The cotton and iron of Tennessee come to the Ohio river only in small quantities also.

St. Louis is the next general commercial centre the trade of which is not embraced in the account of exchanges between the east and the west. The entire trade of St. Louis, and of such points southward to the mouth of the Ohio river as are now increasing in trade through the Illinois Central railroad or otherwise, should be taken into the exhibit of domestic commerce.

Chicago is a large receiving point, and a larger distributor both of agricultural produce and of manufactured goods than either of the cities first named, but a large share of its exchanges will be noted in the statistics of trade over the great railroad and lake lines. The exchanges here conducted are so extensive, however, that they should be given separately, subsequently estimating what proportion may be taken as included or not included in other statements of internal exchanges.

The Lake Superior trade, now only at the moderate proportions of ten or twelve million dollars in value shipped outward, and twelve millions (including mining machinery) shipped inward, is a distinct and notable item of trade. The copper and iron produced there are largely smelted and wrought at Detroit, Cleveland, Pittsburg, and Buffalo, but a small share of its products being shipped direct to the Atlantic cities. There is a considerable lumber trade of the upper lakes, and a trade in the salt, fish and local products of the State of Michigan which occupies a class of lake coasting vessels in a profitable and important business, which does not go much beyond the cities of the lake shores.

Beyond all these is the trade of Saint Paul and the northwestern border, and of Leavenworth and the great plains to the gold region; which constitutes a distinct

and very important division, not only for what it now is, but in view of its rapid expansion, and the enormous development it is soon to attain.

At the south, New Orleans was always a focal point for extensive domestic exchanges, conducted both coastwise and by the Mississippi river. We can now merely state to what these exchanges attained before the disturbances which have destroyed that trade for the time, and which leave it doubtful to what extent and in what time they will be resumed.

## SPECIFIC CALCULATION OF THE EXCHANGES BETWEEN THE EAST AND THE WEST.

### I. WESTWARD FREIGHTS.

The reports of the Pennsylvania railroad are more full and complete as regards the details of articles carried than those of any other line of transportation so extensive, and they may therefore be taken as the best to initiate the calculation of values proposed. Prices may be assigned to almost every article in detail, if desired, and the total value may be so deduced, or an average may be taken with less labor which will closely approximate the same result. The general classification into which these articles are thrown is the same as that employed in describing the freight of the New York and Erie and the New York Central roads, and therefore a classified price, calculated to agree with the total derived from the average of all articles in detail, could be used with safety for all similar statements of freight aggregates. Thus the detailed list of articles appears to show that one third of the tonnage carried westward on the Pennsylvania road is properly described as dry goods, another third as drugs and groceries, and the remaining third as iron and heavy goods. If this division is correct, it is not material whether the values assigned per pound to each be absolutely correct, so that their total does not exceed the total deduced by a calculation of values for each article. For the year 1862 the westward freight of this road was as follows:

From Philadelphia to Pittsburg .....	256, 204, 920 pounds, or 128, 102 tons.
From Baltimore to Pittsburg .....	34, 206, 488 pounds, or 17, 103 tons.
Totals .....	<u>290, 411, 408 pounds, or 145, 205 tons.</u>

The schedule of articles shows a large preponderance of dry goods, drugs, medicines and dyes, groceries, boots, shoes, and hats, and similar articles of high relative value. It is well known that the maximum often assumed by carriers as the limit of value at which they will compensate shippers for goods lost in their care, is usually insisted upon by losers as being below their true value. This maximum is one dollar per pound; but as it is usually applied to other goods than those here distinguished as the third class, or heavy goods, it is but an incidental proof favoring an increase of the general average of prices. It is proposed to assume an average value of forty-three and one-third cents per pound for this westward freight; and in dividing it into three equal portions, to assign one dollar per pound to the dry goods, or highest class, twenty cents per pound to the drugs and groceries, and ten cents per pound to the iron and heavy goods.

1. Dry goods.....	96,803,803 pounds, at \$1 per pound .....	\$96,803,803
2. Drugs and groceries .....	96,803,803 pounds, at 20 cents per pound...	19,360,761
3. Iron and heavy goods.....	96,803,802 pounds, at 10 cents per pound...	9,680,381
Totals .....	<u>290,411,408 pounds, at 43½ cents per pound..</u>	<u>125,844,945</u>

This is of through freight only, and that which, being carried furthest, may be presumed to average the highest value per pound. During the year 1862 the price of many descriptions of dry goods had largely increased as compared with 1860, and this was particularly true of the classes most largely carried to the interior markets—cotton and cotton-mixed goods, coarse woollens, and leather manufactures. It is, in fact, probable that the values here assumed are too low, and that a total value higher by some millions would be more nearly correct for the year 1862; but as this year is exceptional as compared with former years, it may be better to retain a relatively low rate—one certainly not requiring abatements for over-estimate.

Next, the quantities carried locally on the Pennsylvania road from its eastern terminus to points along its line require to be considered. For reasons elsewhere stated it is assumed that these freights passing through, or departing from, each terminus, belong in the general account, since there is nothing taken for the freights of other roads connected with, and continuing the business of, the great lines. The record of the local freight of the Pennsylvania road is incomplete, in consequence of the employment on it of "cars of individual transporters," who do not make return of their business in the statements of the company, merely paying tonnage rates or mileage rates for their cars in bulk. For 1862 the total reported as carried by cars of the company from the eastern terminus westward, but not through to Pittsburg, is 91,565,194 pounds, to which may be added for the individual transporters at least enough to raise the aggregate to 100,000,000 pounds, or 5,000 tons, of 2,000 pounds each. Of this freight about one-eighth is dry goods, one-fourth groceries, and the remainder, five-eighths, heavy goods. For groceries and heavy goods it is perhaps necessary to reduce the prices taken in the former case, as follows:

1. Dry goods.....	12,500,000 pounds, at \$1 per pound.....	\$12,500,000
2. Groceries, &c. ....	25,000,000 pounds, at 15 cents per pound ...	3,750,000
3. Heavy goods.....	62,500,000 pounds, at 6 cents per pound ....	3,750,000
Totals.....	<u>100,000,000 pounds, at 20 cents per pound ...</u>	<u>20,000,000</u>

These are minimum quantities and values, which should not be excluded from the account of movements westward. Probably the larger share of the articles have already been brought from points averaging a hundred miles beyond the eastern terminus of the road—New York and the New England States—and they are to be carried at least a hundred miles further, on the average, before being distributed to consumers.

The detailed tables which follow are given for their general value in illustrating the trade of the east with the interior. Were such details accessible for the great roads of New York, a similar diversity and corresponding general divisions would undoubtedly appear. The Central road of New York carries a larger proportion of light and valuable goods, and the Erie road a larger proportion of heavy goods, the two together averaging very nearly the same in classification and in values with the Pennsylvania road.

*Articles carried westward on the Pennsylvania railroad.*

The local freight taken up at all points of the line for carriage beyond the mountains is unnoted in the previous calculation of through freights. This was in 1861 and 1862 as follows:

1861.—Coal, 23,947 tons; other merchandise, 114,126,409 pounds.

1862.—Coal, 5,701 tons; other merchandise, 207,484,614 pounds.

The portion of this taken up at stations east of the mountains may safely be assumed to be one-half, giving a value, at a minimum of five cents per pound, of over \$5,000,000.

From the calculation of both branches of the local freight carried, that departing from the east to way stations, and that arriving at Pittsburg from way stations, it is clear that a sum not less than \$10,000,000 might be assumed as the value of that carried an average distance of three hundred miles from producer to consumer, and of \$5,000,000 for that crossing the line of the Alleghenies in the general east and west exchange.

Next in accessibility and fulness are the statistics of transportation over the New York Central road. Specific articles are named only in a very few instances, but a classification is adopted which distinguishes "Products of the Forest," "Products of Animals," "Vegetable Food," "Other Agricultural Products," "Manufactures," and "Merchandise"—terms too vague, as at present applied, to correspond with any commercial or financial usage. In the traffic westward the terms "Merchandise" and "Manufactures" largely predominate, and in that sent eastward the chief amounts are of vegetable food and products of the forest and of animals. For the freight going westward it is scarcely possible to separate and distinguish articles at all. The following table comprises the tonnage of such trade, as given in the reports of the company, for six years:

*Through tonnage westward over the New York Central railroad.*

As this road runs parallel with the Erie canal, and is further relieved of heavy and cheap freight by other canals and by Lake Ontario, no necessity appears to exist for a reduction of values for either division of the freight below the averages assumed for the through and way freight of the Pennsylvania road.

Under the assumption that way freights are properly included, for reasons before stated, the two totals of freights westward may be divided in three equal parts, to which the values before taken for dry goods, groceries, and heavy goods, respectively, may be applied. When put together, the "merchandise" amounts to two-thirds of the whole, or to 214,221 tons, out of 323,305 tons, which is sufficient proof of the generally high grade of the goods carried.

*Values of through freight westward.*

53, 671 tons, at \$2,000.....	\$117, 342, 000
53, 671 tons, at \$400 .....	21, 468, 400
53, 671 tons, at \$200 .....	10, 734, 200
<hr/> 161, 013 tons. Total value.....	<hr/> 149, 544, 600 <hr/>

*Values of way freight westward.*

20, 286½ tons, at \$2,000.....	\$40, 573, 000
40, 573 tons, at \$300 .....	12, 171, 900
101, 432½ tons, at \$120 .....	12, 171, 900
<hr/> 162, 293 tons. Total value.....	<hr/> 64, 916, 800 <hr/>

By the calculation here assumed the total value of the westward freight of this road in 1862 was \$214,461,400—a sum which appears excessive. Yet the elements of the calculation are sustained by all the facts that can be obtained bearing on the quality and value of the goods sent westward by such mode of conveyance. The westward tonnage of the Erie canal, the associate of this line of transportation, which must, from the nature of the case, carry the larger share of cheap and heavy freight, has for years been officially estimated at the average value of 18 cents per pound. The total values here given for railroad freight average on all the classes about forty cents per pound—a little more than twice the rate assumed for canal freight. When the advance in values existing in 1862 is considered, this average price cannot be considered excessive.

*Westward transportation on the Erie railroad.*

The westward freight of the Erie railroad is not classified in the reports of that company, although the eastward freight is, sufficiently for all practical purposes. It is undoubtedly altogether similar to the business of the other roads, so far as the through freight is concerned. The way or local traffic is probably more exclusively or distinctively a local trade, and a greater portion of heavy and low-priced goods is carried. It is proposed, therefore, to take the same divisions applied to the other roads in valuing the through tonnage, and to assume for the local tonnage a classification and prices lower than those applied to the Pennsylvania line.

The tonnage westward for three years is stated as follows in the report:

Year.	Through.	Way.	Total.
	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>
1861 .....	175, 567, 350	845, 567, 060	1, 021, 134, 410
1862 .....	299, 793, 230	1, 106, 011, 030	1, 405, 804, 260
1863 .....	339, 840, 110	1, 233, 210, 350	1, 573, 050, 460

Applying the calculation assumed for through freight, we have:

99, 931, 077 pounds, at \$1.....	\$99, 931, 077
99, 931, 077 pounds, at 20 cents.....	19, 986, 215
99, 931, 077 pounds, at 10 cents.....	9, 993, 107

299, 793, 230 pounds. Total value .....	129, 910, 399
---	---------------

The way tonnage of this road undoubtedly requires a reduction to lower classes and values than those before employed. It reaches a very large aggregate for the year 1862, not less than 553,005 tons of 2,000 pounds. Of what chief articles this immense amount is made up the reports of the company do not state; but it may perhaps embrace some considerable amounts of coal, stone, wood, or other freights of the lowest class, carried between points along its line. Assuming that 300,000 tons of the way freight is of this class, and not properly of goods exchanged between remote points of production and consumption, the remaining 253,005 tons may be taken as similar to the way freights before considered—one eighth being of goods worth one dollar per pound, one-fourth being worth 15 cents per pound, and the remainder six cents per pound, viz:

31, 626 tons, at \$2,000 per ton .....	\$63, 252, 000
63, 252 tons, at \$300 per ton .....	18, 975, 600
158, 127 tons, at \$120 per ton .....	18, 975, 240

253, 005 tons. Total value .....	101, 202, \$40
----------------------------------	----------------

Stone, lumber, and coal, for local consumption, being thus excluded, the proportion of goods of a general character assumed to be carried, both for consumption along the line and for further distribution by the lateral roads connecting with Buffalo on the north and with Pennsylvania and Ohio on the south, does not appear unduly large. The values are large in the aggregate, it is true, but the business is enormous in comparison with any other interior line of land carriage in the world.

There remain to be considered the carriage of merchandise by the Erie canal, and such small portion as the Canadian lines carry westward—this last being really so small in tonnage westward that it hardly need be embraced at all. In eastward tonnage it is important, for many reasons which do not apply to goods going westward.

The Erie canal carried the following aggregates of freight westward for fourteen years to 1862, inclusive:

Year.	To Buffalo.	To Oswego.	Total.	Value at 18 cts. per lb.
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	
1849.....	68,020	20,287	88,315	\$31,793,400
1850.....	79,405	35,091	144,496	41,218,560
1851.....	99,918	74,981	174,899	62,963,640
1852.....	143,787	76,012	219,799	79,127,640
1853.....	163,192	98,560	261,752	94,230,720
1854.....	167,550	64,329	231,879	83,476,440
1855.....	145,530	74,936	220,466	79,367,760
1856.....	114,696	68,817	183,513	66,064,680
1857.....	74,738	43,393	118,126	42,525,360
1858.....	47,350	29,540	76,890	27,680,400
1859.....	72,767	26,109	98,876	35,595,360
1860.....	72,030	47,652	119,682	43,085,520
1861.....	35,278	17,184	52,462	18,886,320
1862.....	52,945	18,094	71,039	25,574,040

The valuation here made is that of the auditor general in the annual reports of the "Trade, Tolls, and Tonnage of the Canals of New York," the table just given being copied from that report for the year 1862.

It is apparent from this table that the business of the canal rose to higher proportions as a carrier of merchandise westward before the completion of the railroad than since that time. The railroads of that vicinity were first consolidated in a single organization and adapted to the purposes of successful freight business in 1853 and 1854—not completely until the latter year. The quantities and values attain their maximum, therefore, in 1853, and after this date they steadily decline from \$94,230,000 to \$25,574,000. No change in the price per pound assigned to this freight is made in the series of years of which we here take account. It may be of interest to cite the values taken in earlier years, which were in 1836, '37, and '38, 12½ cents per pound; in 1839, 15 cents; in 1840, 16 cents; in 1841, 18 cents; in 1842, 15 cents; and from 1843 to 1846, inclusive, 17½ cents. All subsequent to 1847, and including that year, was estimated, as in the table copied, at 18 cents per pound. A list of articles constituting the tonnage in 1862 is given, from which it is evident that the valuation per pound should be increased for that year. It appears that the chief articles are sugar, molasses, coffee, crockery, iron, iron manufactures, and general merchandise, the proportions of which are as follows:

Sugar .....	16,230 tons of 2,000 pounds.
Molasses .....	4,598 " " "
Coffee .....	1,005 " " "
Iron and steel.....	2,198 " " "
Railroad iron.....	2,553 " " "
Nails.....	984 " " "
Crockery.....	2,535 " " "
Merchandise.....	40,576 " " "

It is evident that these articles made up the bulk of the traffic in previous years as well as in 1862, and that the average value per pound was greater in that year than in 1860. No more direct effect of the increased duties on imports and the high internal taxes levied could be produced than upon the staples named above, and undoubtedly the 18 cents average of 1860 should be 22 or 23 cents at least in 1862. Assuming it at 23 cents, there is added to the value of the entire carriage of the canal the sum of \$7,103,900, making the total \$32,077,940, instead of \$25,574,040.

The general summary of quantities and values deduced from these several calculations presents the following aggregates, embracing only the three chief railroads and the Erie canal, and taking no account of various lines which carry a less proportion westward than they do eastward. A small estimate should be added for the business of the Baltimore and Ohio railroad, which is usually one of the large carrying lines, but which, in consequence of the interruption of its business then, caused by the war, had very little through trade westward during the year 1862:

	Tons.	Value.
Pennsylvania railroad—Through .....	145,205	\$125,844,945
Way.....	50,000	20,000,000
Erie railroad—Through.....	149,896	129,910,399
Way.....	253,005*	101,202,840
New York Central railroad—Through .....	161,013	149,544,600
Way.....	162,293	64,916,800
Erie canal—Through .....	71,039	25,574,040
Totals .....	992,451	616,993,624

\* Exclusive of 300,000 tons rejected as being merely local.

Adding a small estimate for the Baltimore and Ohio railroad, we have, approximately, 1,000,000 tons of merchandise carried westward from the seaboard to the interior, exclusive of merely local consumption, and of all deliveries not more than fifty miles from the eastern terminal points of the several great lines, and a value for this commerce of more than \$600,000,000.

It must be borne in mind, in considering whether these quantities and values are excessive or not, that several important partial or lateral outlets of this trade have not been noticed at all. The railroad from Portland, Maine, to Canada is one of these, the Champlain canal another, and the railroads of northern New York also add something, together furnishing a moderately large amount which, being shipped through Canada, reaches some port of the lakes to enter the States south or west of the lakes for consumption. The proportions of this trade are, under any aspect of the case, and with any abatements from these quantities and values which the best corrected judgment may make, so vast that they cannot fail of due appreciation after being once brought to attention.

It is apparent that in this calculation quantities and values are embraced which do not pass the meridian of the Alleghanies for the exclusive consumption of the population beyond that line. Even if the limit of distance assumed were 300 miles, there would be from fifty to one hundred miles of the length of each of the New York lines east of this assumed meridian that would be supplied by a carriage far enough to constitute a part of the general trade. By making a deduction for such portion of, say twenty millions of dollars, the preceding estimates may be verified by another and wholly distinct test, namely, by computing the consumption *per capita* of the entire population of the Trans-Alleghany States and parts of States. Portions of New York and of Pennsylvania, portions of Kentucky and Tennessee, and all the remaining northwestern States this side the Rocky mountains, received their supplies of both foreign and domestic merchandise wholly through these lines during the year under consideration. The population of these States in 1860 was as follows:

Ohio.....	2, 339, 511
Michigan.....	749, 113
Indiana.....	1, 350, 428
Illinois.....	1, 711, 951
Wisconsin.....	775, 881
Iowa.....	674, 913
Minnesota.....	172, 123
Kansas.....	107, 206
Missouri.....	1, 182, 012
Nebraska.....	28, 841
Estimate for other Territories.....	200, 000
Parts of New York and Pennsylvania.....	350, 000
“ “ Kentucky and Pennsylvania.....	250, 000
	<hr/>
	9, 891, 979

The natural increase on the reported population of 1860 would add something more, and it may safely be assumed that the population supplied beyond the Alleghanies in that year was in round numbers ten millions. The estimated value of the merchandise of all classes supplied to this population we have reduced to \$597,000,000, from which should further be taken an amount of special war material and public property probably above 15 millions in value, as here computed from its tonnage. The sum remaining to apply to individual consumption would then be near 580 millions of dollars, or fifty-eight dollars *per capita* of the population.

This is, of course, the consumption of both domestic and foreign merchandise, and it places upon the personal consumption of the people all the usual demand of valuable goods for ordinary public uses. The circumstances existing in all parts of the country for that year greatly stimulated the demand for articles required for other than ordinary personal use, for which it would be reasonable to make a deduction in comparing consumption with that of ordinary times.

It has been shown by the comparison of imports and population for a series of years, that the average annual consumption of foreign goods *per capita* in the United States has attained to ten dollars, for a period of ten years preceding the war.

Year.	Imports consumed.	Population.	Consumption per capita.
1852 .....	\$195,656,060	24,604,261	7.95
1853 .....	250,420,187	25,342,388	9.88
1854 .....	279,712,187	26,102,659	10.71
1855 .....	233,020,227	26,885,738	8.67
1856 .....	298,261,364	27,692,310	10.77
1857 .....	336,914,524	28,523,079	11.81
1858 .....	251,727,008	29,378,771	8.57
1859 .....	317,873,053	30,260,134	10.50
1860 .....	335,220,919	31,429,891	10.66
1861 .....	315,004,728	32,373,388	9.73
Average of ten years .....	.....	.....	9.92

This consumption was calculated upon the basis of the entire population of the United States, of course including three and a half to four millions of slaves of the southern States. Excluding the slaves, and taking only the active population, such as are embraced in the northeastern States, the consumption *per capita* would be increased at least one half.

And again, the previous calculation is based upon the entry or invoice value of imports only, not including duties paid, or the cost of handling and shipment.

The values assigned to the freight carried are, of course, in excess, so far as they relate to foreign articles, being those which actually attach to the goods at the line of transit to their western consumers. For both the reasons here named it would be safe to assume that sixteen dollars for each inhabitant would represent the goods of foreign origin transported.

The greater portion of the goods carried, are, however, of the produce and manufacture of the eastern States. As some guide to the proportion of these, the census estimate of \$2,000,000,000 of domestic manufactures in 1860 may be taken. Deducting from this aggregate \$45,000,000 exported to foreign countries, there remains an amount consumed by 31,000,000 of inhabitants of \$1,955,000,000, or \$63 for each person. Here, again, the contrast between the slave and the free population requires an addition when applied to the people of the northwestern States, increasing the same to \$70 or \$75.

Of this sum of \$75 worth of movable goods, of the classes usually exchanged from one State to another, it is probable that not more than one-third were made or produced in the section beyond the Alleghanies, and that two-thirds were sent there from the manufacturing east. Nearly all textile fabrics, cordage and leather manufactures, were carried from the east. Drugs, medicines, chemicals, iron, steel, and the finer manufactures of machinery, tools and cutlery, books, paper and paper manufactures, brass and copper manufactures, and manufactured clothing of all classes. Taking these proportions as correct, there are more than \$30 worth of all these domestic products consumed, and the division of values will be as follows:

Value of foreign produce consumed.....	\$160, 000, 000
Value of domestic produce and manufactures.....	350, 000, 000
Value of public property included.....	18, 546, 000
	<u>528, 546, 000</u>

This classification of values consumed is only intended to aid the discussion by such light as may in this way be thrown upon it. There are no settled rules applicable to such cases, and the circumstances are in the present case, for many reasons, peculiar. The activity of trade and exchanges increases far more rapidly than the population has done for the past twenty years, a result in part due to the increased power of consumption and command of means by the people, and in part to the greater cheapness and promptness of transportation. The proportion of foreign values transported by these lines to the western States for consumption is largely increased in 1862 by the necessity to obtain sugar and coffee almost wholly from the Atlantic cities, instead of the Mississippi river, as in former years. The loss of New Orleans sugar is an important item, as the heavy tonnage of these articles in the following statement shows:

*Tonnage of leading articles on the Erie canal, in 1862, to the several western States.*

States, &c.	Sugar.	Molasses.	Coffee.	Iron man- ufactures.	Crock'ry & glassware.	Other mer- chandise.
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>
To Ohio.....	2, 363	759	194	536	487	10, 430
Michigan.....	2, 387	759	172	502	289	4, 173
Illinois.....	7, 750	1, 807	418	1, 477	1, 029	13, 909
Wisconsin.....	1, 980	1, 017	174	2, 372	440	5, 756
Indiana.....	104	263	8	42	58	634
Minnesota.....	66	29	-----	5	6	28

Canada.....	1, 301	210	20	40	78	1, 679
Total to other States..	16, 230	4, 958	1, 005	5, 735	2, 535	40, 576
Left in New York.....	11, 407	4, 592	630	10, 294	1, 550	36, 258
Total moved from tide-water	27, 637	9, 550	1, 635	16, 029	4, 085	76, 834

For this large way tonnage no estimate has been made to represent the general westward commerce, though by the most rigid rules of classification there would be a share of it coming within the definitions properly applying to these exchanges. Actual deliveries to consumers at points three hundred to five hundred miles from the seaboard would probably cover one-third of the way freight above described as being left in New York.

The Champlain canal is also a channel for large shipments to Canada, and in some cases for western localities through Canada. In the following table the entire movement of merchandise from tide-water by both the Erie and Champlain canals is given, distinguishing that going out of the State from that left within its limits, and giving also the internal movement westward on these lines, from one point to another along them.

*Movement of merchandise westward on the New York canals.*

*Westward transportation on the Canadian canals.*

The westward movement on the Canadian canals is at present a part of the general carriage of merchandise from eastern to western markets within the United States. For reasons before stated, it is not proposed to calculate values

for this tonnage and add them to the totals previously made up, the way business of the great roads and of the canal being in part taken to cover these values. A large business is done on the Welland canal in articles originally from the United States and destined to markets south of the lakes. The following is the Canadian official account of the—

*Westward or upward trade through the Welland canal.*

From United States ports.	1861.		1862.	
	To Canadian ports.	To United States ports.	To Canadian ports.	To United States ports.
	Tons.	Tons.	Tons.	Tons.

Whiskey.....	39	9		5
Window glass.....		122	1	79
Other articles.....	45	4,293	75	9,393½
Lumber.....	136	200	1,443½	981
Total.....	10,815	116,240	14,908½	171,673½

Some portion of this tonnage is of articles of low value per ton, the least valuable being coal, iron ore, lumber, and salt. Iron ore is taken from mines in Canada near Kingston, and the salt is mainly the product of the works of central New York.

As this table gives the entire upward or westward trade of the Welland canal, it affords a striking proof of the preponderance of trade on that canal in articles carried from one market in the United States to another. The return trade eastward exhibits the same excess of freights destined to United States markets, as will appear in the table corresponding to this, illustrating transportation eastward.

## II. TRANSPORTATION EASTWARD.

The eastward freight over these great lines of transportation is in some respects better known and more readily determined as to both quantities and values than that carried westward. The chief items that compose it are well known staples of agricultural produce, each of which has been carefully calculated at all the points of shipment at the west, and of receipt at the east. For the last eight or ten years, however, the quantity of miscellaneous freight has been rapidly increasing, including a share of manufactured goods. The tables of the Pennsylvania road are again the best to illustrate the present condition of the trade, and a table of articles carried for five years to 1863 is here given, corresponding to the table of articles carried westward.

By a careful analysis of values of the specified articles of western freight sent eastward over the Pennsylvania railroad in 1862, it appears that the average, exclusive of coal, is very nearly ten cents per pound. The New York canal freight is estimated by the auditor of the canal department, in his annual reports to average two cents per pound in value; an average which is applied there only to the lowest grades of western freight. Railroad freight is unquestionably far more valuable per ton than that now carried on the Erie canal. The freight carried over the chief New York roads is not stated in detail in their reports. The Erie road in part classifies the freight sent eastward from Dunkirk, but not its entire eastern business. Evidently the proportion of fourth-class freight is larger than on any other road, but as a great share of this is live stock, pork, beef and meats, the value is not so low as if grain was carried. Some of these weights and quantities are as follows, for 1862:

Live stock.....	46, 989 cattle, } 258, 089 hogs, } 21, 454 sheep, } 4, 306 horses, }	Pounds. 111, 051, 918
Fourth-class freight.....		343, 943, 694
Miscellaneous freight.....		58, 116, 982
Flour, 1,078,102 bbls.....		215, 620, 400
Total pounds.....		<u>728, 732, 994</u>

This is all from Dunkirk. The freight received from the Atlantic and Great Western should be included also, but it is placed in the aggregate of "way freight," and it is believed to be a just division to take one-half the way freight eastward as the proper associate of that classed as "through." The totals are therefore as follows:

Through eastward.....	942, 627, 210
Way eastward (one-half of 1,002,037,030).....	501, 018, 510
	<u>1, 443, 645, 720</u>

The value of this, at ten cents per pound, is \$144,364,572.

The freight carried over the two great railroads of New York is not specified in detail in the reports of those roads. That of the New York central road is in part classified as products of the forest, of animals, vegetable food, and manufactures; but such distinctions are now only general and do not suffice to base estimates of value on. The division made in that report of aggregate tonnage eastward in the year ending September 30, 1862, is as follows:

	Tons.
Products of the forest.....	32, 462
Of animals.....	350, 050
Vegetable food.....	461, 337
Other agricultural products.....	38, 375
Manufactures.....	63, 411
Merchandise.....	28, 884
Other articles.....	89, 609
Total tons.....	<u>1, 064, 128</u>

or pounds 212,825,600.

This distribution indicates a generally high grade of value. Products of animals cannot be less than twelve cents per pound on an average, and the remaining classes, other than vegetable food, going much higher. The average cannot be less than ten cents per pound.

Taking from the above aggregate one-half the way freight eastward, there remain—

Through freight.....	616, 177 tons.
One-half way freight.....	223, 975 tons.
Total.....	<u>840, 152 tons.</u>

or 1,680,304,000 pounds; at ten cents, value \$168,030,400.

The several great railroad lines, therefore, carried an estimated value of freight eastward, across an assumed line of division between the west and the east, as follows:

The New York Central.....	\$168, 030, 400
New York and Erie.....	144, 364, 572
Pennsylvania.....	113, 000, 000
Baltimore and Ohio, (estimated).....	25, 000, 000
Total, four roads.....	<u>450, 394, 972</u>

With these total values of eastward freight by the great railroad lines should be connected the value of the eastward freight of the Erie canal, the details of which are given in subsequent tables. That value is officially stated by the auditor general for the year 1862 at \$72,131,136 for "property coming from other States" alone. The way freight is not taken into account. The summary of values transported eastward thus becomes:

By the four railroads.....	\$450, 394, 972
By the Erie Canal.....	72, 131, 136
Grand total.....	<u>522, 526, 108</u>

The various railroads of Canada carried a portion of the western produce of the United States sent eastward to markets within the United States and for export; but as the account of way tonnage taken on the New York roads is large, it may be considered as merely covering the amount so carried by Canadian lines. Certain branches of the Central railroad of New York probably bring to it portions of the freight going by way of the Welland canal and Lake Ontario, and leaving that lake at Oswego. Some moderate amount is carried to the New York and Erie by its connecting roads to Buffalo. Together, the minor avenues of railroad carriage eastward, north of Pennsylvania, will complete the account, and sustain the aggregates above given under any possible diminution the calculation might require for the leading roads.

The following tables give the detail of eastward freight in very full and satisfactory form over the Pennsylvania road, which has been taken as the basis of the calculation. Values approximating as nearly as could be estimated from current prices were computed in detail on each of the items of this freight, the result being an average on the whole amount a fraction less than ten cents per pound. Possibly the resulting values are too great; but as the freights of these roads have been taken as representative quantities, and as much miscellaneous carriage of produce and merchandise eastward occurs which cannot be noted on either of them, the final sum of values is believed to be too small, rather than too large.

Among the larger unnoted items is the freight of all kinds through Canada which returns to the United States at Oswego, Cape Vincent, Ogdensburg, through the canal to Lake Champlain, and over the railroads leading into Vermont from Canada. Again, there are lateral roads carrying from various points to connect as way freight on some one of the great lines. The Erie road receives immense accessions in this way.

Cattle, sheep, horses, and all descriptions of live stock, also continue to be driven in large numbers from every part of the West, and over all the common roads of the country, from the Maryland line to Lake Erie. The aggregate of their value is less now than formerly, so many take the railroads in preference; yet the total value of animals so moved cannot be less than two or three millions of dollars annually.

The calculation of eastward freights on the great lakes is given at length, and with the fulness which that most important trade demands, in the following separate section. From the statements of the total movement eastward, with which it closes, another estimate of values may be made, covering the business in flour and grain in 1862:

Flour .....	barrels..	8,359,910,	value, estimated	\$50, 159, 460
Wheat .....	bushels..	50,699,130,	value, estimated	63, 373, 912
Corn .....	bushels..	32,985,922,	value, estimated	16, 492, 961
Other grain ....	bushels..	10,844,939,	value, estimated	5, 422, 470

Total.....				<u>135, 448, 803</u>
------------	--	--	--	----------------------

It is difficult to make any further calculation on specific articles—provisions, metals, textile raw materials, or the very large value of animals.

*Articles carried eastward on the Pennsylvania railroad.*

#### TRANSPORTATION EASTWARD ON THE GREAT LAKES.

The commerce of the great lakes might of itself be taken as the measure of the internal exchanges of the northern States east and west, adding to its quantities about half the freight of the Erie railroad, and the whole carried on the Pennsylvania Central and the Baltimore and Ohio roads. But as the business of the Erie canal and the New York railroads is somewhat more definitely stated, and as nearly all the produce and merchandise moved on the lakes goes finally over one or the other of these lines, the calculations of lake commerce which here follow are regarded as duplications of the quantities and values previously given. It will be seen that they sustain the aggregates first taken, and furnish evidence that cannot reasonably be doubted that these exchanges between the east and the west constitute the most gigantic system of internal commerce the world has known.

The shipping employed on the great lakes has had various alternations of fortune, being sometimes highly profitable, and therefore stimulated to great development in both sailing and steam vessels. It first began to be conspicuous in 1833, and rose rapidly in the five years succeeding to 50,000 tons. In 1843 an increase again began, which, with but one or two partial reverses, as in 1857, has continued to the present time. An immense and highly profitable business has been done by lake shipping in the carriage of grain and flour during the last four years, beginning with the fall trade of 1860, the consequence of which was a great increase of building in all classes of vessels adapted to the trade. The following table shows the high prices paid for freight on wheat from Milwaukie and Chicago to Buffalo during the months of navigation from 1859 to 1863. It is taken from the report of the Chamber of Commerce of Milwaukie for 1863.

*Table showing the monthly range of freights on wheat to Buffalo, in cents per bushel.*

Months.	1859.	1860.	1861.	1862.	1863.
April.....			6 a 8	10 a 8	9 a 7
May.....			6½ a 10	10 a 5	8 a 9
June.....			7½ a 5½	5½ a 10	10½ a 8
July.....			6½ a 4	8½ a 10	7 a 4
August.....			5 a 13	5 a 9	4 a 6
September.....	4 a 7	17 a 14	11 a 15	14 a 8	6 a 7
October.....	7½ a 6½	13 a 20	15½ a 24	8 a 17	6½ a 12½
November.....	10 a 6	12½ a 10	14½ a 20	14 a 15	9½ a 8

These prices are much above the average in previous years, and they have developed the lake shipping to an unprecedented extent. The following table is the official record of tonnage existing at all the ports of the lakes and St. Lawrence river at the close of each year from 1830 forward:

TONNAGE OF VESSELS OF THE UNITED STATES, OF ALL CLASSES, EMPLOYED  
IN THE LAKE TRADE.

*The annual totals of registered and enrolled tonnage at all the lake ports,  
officially reported to the Treasury Department.*

	Tons.		Tons.

1845 .....	86, 071	1862 .....	547, 165
1846 .....	101, 545	1863 .....	611, 398

The tonnage here recorded includes all descriptions of enrolled tonnage in river and canal trade, and it therefore exceeds the amount actually employed in east and west transportation. There is also a small abatement to be made on account of the character of the official record, the law requiring the name and tonnage of each vessel to be retained until official notice of its loss or transfer is received. On this account perhaps fifty thousand tons is of vessels lost or transferred to other districts, the exchange of papers in regard to which is incomplete.

Perhaps the best record of the vessels and tonnage actually employed in this trade is that made up by the western Boards of Trade, great care being taken to perfect this record at Chicago, Milwaukee, Detroit, Toledo, Cleveland, Buffalo, and Oswego. The Chicago Board of Trade make the following report of both American and Canadian shipping in the lake trade in their report for 1862:

*Table showing the number, class, tonnage, and valuation of vessels, American and Canadian, engaged in the commerce of the lakes, 1858 to 1862.*

The following is the increase of the lake marine in 1862, distinguishing American and Canadian vessels, as reported by the same authority:

Class of vessels.	UNITED STATES VESSELS BUILDING.			CANADIAN VESSELS BUILDING.		
	No.	Tonnage.	Value.	No.	Tonnage.	Value.
Steamers .....	3	1,114	\$83,550	2	970	\$72,750
Propellers .....	5	3,815	276,125	6	1,960	147,000
Propeller tugs .....	8	1,194	89,550			
Barks .....	2	1,037	46,665	6	2,690	121,050
Schooners .....	38	15,546	654,570	10	3,100	139,500
Barges .....				19	6,600	198,000
Totals .....	56	21,706	1,150,455	43	15,320	678,800

## SUMMARY.

	Aggregate tonnage.
5 steamboats.....	2,084
11 propellers.....	3,775
8 steam tugs.....	1,194
8 barks.....	3,727
48 schooners.....	17,646
19 barges.....	6,600
99 vessels building—total tonnage.....	37,026

The Milwaukee Chamber of Commerce reports, as engaged in the trade of that port alone, the following number and tonnage of vessels in 1862 and 1863:

Class of vessels.	1862.		1863.	
	No.	Tonnage.	No.	Tonnage.
Steamers.....	7	2,546	8	5,353
Propellers.....			69	38,541
Barks.....	8	3,487	70	28,883
Brigs.....	8	2,481	20	6,225
Schooners.....	107	19,330	405	81,769

No explanation is given of the sudden and great increase in propellers and schooners in 1863 over 1862, but it is probably due to the connecting of lines regularly at Milwaukee in 1863 which did not previously connect there. The names of several propeller lines of recent establishment are given in the report, however, the eastern connections of which indicate the destination of their freight.

1. The People's Line and Western Transportation Co.: Twelve propellers to Buffalo, Erie railroad and Erie canal.

2. The New York Central Line: Ten propellers to Buffalo, New York Central road and Erie canal.

3. The Grand Trunk Line: Eight propellers to Sarnia, Canada, Grand Trunk railroad.

4. Evans's Line: Seven propellers to Buffalo, New York Central and Erie canal.

5. Northern Transportation Citizens' Line: Eight propellers to Oswego and New York canals.

6. Great Western Railway Line: Seven propellers to Sarnia, Canada, Great Western railroad.

7. Detroit and Milwaukee Railroad Line: Two steamships to Grand Haven, Michigan.

8. Montreal Propeller Line: Five propellers weekly, to Montreal, Canada.

It will be observed that three of these lines are to Canada, and that two, having 15 propellers, connect with railroads of Canada at Port Sarnia, nearly opposite Detroit. This is the point in Canada at which the large quantities of western produce enter in transit to eastern markets of the United States. Though appearing in the statistics as exports to Canada, they are not such in fact, merely taking that as a shorter route at certain seasons to the markets of the Atlantic seaboard.

The Detroit statistics compare 1857 with 1860 and 1862, as follow :

Class of vessels.	1857.			1860.			1862.		
	No.	Tons.	Value.	No.	Tons.	Value.	No.	Tons.	Value.
Sail vessels .....	849	225,419	\$7,599,700	581	173,736	\$4,352,600	851	355,101	\$8,356,470
Steam propellers.	117	59,891	2,959,500	77	43,390	1,690,900	120	65,458	3,228,500
Total.....	966	285,310	10,559,200	658	217,126	6,043,500	971	420,559	11,584,970

This statement shows a greater decline in 1858 to 1860 than is apparent from other evidence, but it also shows the decline to have been more than recovered in 1862. While the commerce of the lakes was undoubtedly much depressed in 1858 and 1859, the subsequent high prices of freight, and the vast amount of produce forwarded, restored it to the fullest proportions that could have been anticipated under any circumstances.

The Chicago statement copied above shows that 1,730 vessels, with an aggregate capacity of 450,893 tons, were engaged in lake commerce of a general character, east and west, in 1862, of which one-fifth was Canadian, or foreign. Undoubtedly the business of 1863 was enlarged by 50,000 tons in addition, making 500,000 tons as the capacity for that year. We have now to obtain an approximate estimate of the produce and merchandise actually moved by this large fleet. Unfortunately the tonnage reported as entered and cleared at the several ports is an imperfect guide to the business in consequence of the absence of discrimination between vessels entering with passengers and in ballast from those arriving with cargoes. At Detroit, Buffalo, and several other ports, an immense tonnage arrival is reported which is merely ferry and passenger transit, having very little significance in the carriage of merchandise either between domestic ports, or between the United States and Canada.

#### GRAIN, FLOUR, AND PRODUCE SENT EASTWARD FROM THE LAKE CITIES AND PORTS.

Chicago is the chief exporting city of the lakes in most agricultural staples, though Milwaukee, at present exceeds it in the amount of wheat shipped eastward. The business of Chicago is enormous in a great number of articles, of provisions as well as of grain, and its commercial reports have for many years been clear and accurate as to all the conditions of its trade, the receipts and exports by all lines of transportation. The following is a statement of the flour and grain forwarded in detail for 1862, and the totals for nine years, as given in the Board of Trade report of that city for 1862 :

*Flour and grain forwarded to all points from Chicago in 1862.*

In this table seven lines leading inland or northward along the lake shore are included, which together took 9,085 barrels of flour, 52,380 bushels wheat, and 465,000 bushels of other grains. These quantities are so small that they will not practically reduce the following aggregates for nine years, in which they cannot be distinguished.

*Total quantities of flour and grain forwarded to eastern markets from Chicago for nine years.*

Forwarded—	Flour.	Wheat.	Corn.	Oats.	Rye.	Barley.
	<i>Barrels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>

1861 .....	1,603,920	15,835,953	24,372,725	1,633,237	393,813	226,534
1862 .....	1,739,849	13,808,898	29,452,610	3,112,366	871,796	532,195

The destination of this movement is very largely to Canada, Collingwood, Goderich, Sarnia, Kingston, Port Colborne, Montreal and Toronto being the points. The quantities so sent in 1862 were: flour, 420,544 barrels; wheat, 3,098,424 bushels; corn, 6,005,661 bushels; oats, 157,252 bushels; rye, 200,659 bushels; barley, 71,919 bushels. These were nearly one-fourth the total quantities sent eastward, except in oats and barley.

The quantity of flour sent eastward by railroad is very great, amounting to

672,961 barrels, or more than one-third of the whole. Of this a portion probably took the lake again at Detroit or Toledo, one-half or more being carried entirely through by railroad.

The shipments or transportation of other articles from Chicago eastward is somewhat difficult of calculation, lake and railroad carriage being to a great extent blended in the statements. The trade in provisions outward is largely increasing, particularly in fresh pork products. The Board of Trade report for 1862 says: "The progress made in pork-packing in Chicago during the past two years is without a parallel in the history of any other city in the United States. During the past two seasons a large proportion of the hogs cut have been made up into English middles, for the Liverpool and London markets. In the early part of this season nearly every packing house in the city was engaged in this branch of the business. The favor with which Chicago brands have been received in the leading markets of England warrants us in the belief that the trade will be one of permanence."

From this statement it may be reasonably inferred that the statement following of hogs, cattle, and cut meats forwarded is mainly to eastern markets, whether by railroad or by lake.

*Cattle, hogs, meats, whiskey, wool, lead, &c., sent from Chicago, 1862.*

	Cattle.	Hogs, live.	Hogs, dressed.	Beef.	Pork.	Cut meats.	Lard.
				<i>Bbls.</i>	<i>Bbls.</i>	<i>Lbs.</i>	<i>Lbs.</i>

Pittsburg, Fort Wayne, and Chicago railroad .....	965,855	5,061,255	14,747	918,627	3,880,486	1,133,766
Total .....	8,460,531	15,212,629	85,084	2,083,084	6,171,748	5,990,426

The preponderance of railroad carriage in these articles is very great; barrelled pork, beef, whiskey, hides, wool, and lead being largely carried by lake, and pork only in excess over the carriage by railroads.

A rough estimate of values may be affixed to these quantities deduced from the prices current reported in Chicago in 1862, but the conditions are subject to so much change that it will be but a rough estimate.

## PRODUCE SENT EASTWARD FROM MILWAUKIE.

The produce sent from Milwaukee is next to that of Chicago in amount and value. The following are the shipments eastward, nearly all by lake throughout, though a part crossing Michigan by railroad in 1861, 1862, and 1863, for ten years, to 1863 inclusive:

*Exports of flour and grain from Milwaukee.*

Year.	Flour.	Wheat.	Oats.	Corn.	Barley.	Rye.
	<i>Barrels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>
1854.....	145,032	1,809,452	404,999	164,900	331,339	113,443
1855.....	181,568	2,641,746	13,833	112,132	63,379	20,030
1856.....	188,455	2,761,979	5,443	218	10,398	.....
1857.....	228,442	2,581,311	2,775	472	800	.....
1858.....	298,688	3,994,213	562,067	43,958	63,178	5,378
1859.....	282,956	4,732,957	299,002	41,364	53,216	11,577
1860.....	457,343	7,563,608	64,682	37,204	28,056	9,735
1861.....	674,474	13,300,495	1,200	1,485	5,220	29,810
1862.....	711,405	14,915,680	79,094	9,489	44,800	126,301
1863.....	603,526	12,837,620	831,600	88,989	133,449	84,047

The exports of flour and grain from all the lake ports in 1863 were as follows:

	Flour.	Wheat.	Oats.	Corn.	Barley.	Rye.
	<i>Barrels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>
Racine.....	12,457	747,898	2,148	69,085	.....	.....
Kenosha.....	.....	122,470	5,210	.....	13,790	400
Sheboygan.....	19,011	255,436	9,701	.....	560	.....
Port Washington.....	4,164	76,880	3,443	50	4,109	2,560
Green Bay.....	140,397	586,805	.....	.....	.....	.....
Milwaukee.....	603,526	12,837,620	831,600	88,989	133,447	84,047
Chicago.....	1,536,691	10,389,381	5,564,650	25,674,082	668,735	835,133
Total in 1863.....	2,301,664	24,751,673	6,416,842	25,832,206	816,133	919,712

The shipment of provisions eastward from Milwaukie in 1862 was large:

Beef, 33,174 barrels, 3,217 tierces, equal to.....	7, 599, 900 pounds.
Pork, 56,434 barrels, equal to.....	11, 286, 800 pounds.
Bacon, 12,665 boxes, equal to.....	5, 382, 625 pounds.
Lard, 20,897 barrels and kegs, equal to.....	5, 177, 593 pounds.
Tallow, 4,750 barrels, equal to.....	1, 106, 750 pounds.

Other produce shipments were:

Butter, 1,068,967 pounds, value.....	\$138, 965
Wool, 1,314,210 pounds, value.....	657, 105
Hides, No. 32,941, value.....	98, 823
Seeds, 8,684 pounds, value.....	26, 052
Whiskey, estimated 20,000 barrels, value.....	180, 000

The value of the produce of all classes shipped at Milwaukie is approximately as follows, for 1862:

Flour.....	\$3, 557, 020
Wheat.....	14, 169, 896
Other grains.....	126, 278
Beef.....	436, 692
Pork.....	564, 340
Bacon.....	322, 958
Lard.....	414, 207
Tallow.....	95, 000
Butter, wool, &c.....	1, 000, 945
Total.....	20, 787, 336

To which may be added, for grain and flour shipped from Racine, Kenosha, Sheboygan, and Green Bay, \$2,590,685, giving an aggregate approximately as follows:

Chicago.....	\$57, 854, 333
Milwaukie.....	20, 787, 336
Other ports of Lake Michigan.....	2, 590, 685
Total value.....	81, 232, 354

*Eastward freights on the Milwaukie and Prairie du Chien and the Milwaukie and La Crosse railways in 1863.*

There are various minor products of the vicinity of Lake Michigan which constituted items of noticeable value in these exports—in the Milwaukee trade reports cranberries, beans, eggs, staves, shingles, brick, &c.—but their aggregate value is small. At ports of the lake further northward there are furs, fish, lumber and wood in large amount. The fisheries of the straits are extensive and profitable, and though great quantities are now sent west, for consumption in Illinois, Wisconsin, and the vicinity, there is a more considerable portion going eastward to all parts of the lake district. From all miscellaneous sources, however, not more than two or three millions of dollars in value would be added to the outward or eastward trade of the Lake Michigan district.

## THE LAKE SUPERIOR TRADE.

The next important accession to the lake trade going eastward is the export trade of Lake Superior, mainly the product of its copper and iron mines. The following statement of the superintendent of the ship canal at the Falls of the Sault Ste. Marie shows the transit of vessels through that canal monthly for 1862:

Months.	SCHOONERS.		PROPELLERS.		STEAMERS.		TOTAL.
	No.	Tons.	No.	Tons.	No.	Tons.	Tons.
In April.....			1	744	1	786	1,530
May.....	28	6,856	20	10,698	28	19,991	37,345
June.....	146	49,336	18	9,834	27	18,812	77,982
July.....	100	29,093	18	9,960	25	17,686	56,739
August.....	135	42,608	21	11,677	24	17,537	71,820
September.....	100	32,850	22	10,849	29	20,109	63,808
October.....	29	8,742	14	7,549	23	16,198	32,489
November.....	5	1,310	7	3,813	17	12,776	17,899
Total.....	543	175,595	121	65,124	174	124,833	359,612

The character of this trade is such that this movement would necessarily represent an equal number of vessels and amount of tonnage each way, as all vessels that go up return again the same season unless lost. The eastward movement of the year 1862 would therefore be:

271 schooners.....tons.. 82,797  
 60 propellers.....tons.. 32,561  
 87 steamers.....tons.. 62,416

Or 418 vessels of all classes.....tons..177,774

The shipments outward for 1862 were estimated by the same authority to be 150,000 tons of iron and iron ore, and 9,300 tons of pure or native copper, valued together at \$12,000,000. Very little else was shipped outward—a few furs, copper ore from the Canadian side, and minor articles. The inward or westward shipments of merchandise, machinery for working mines, supplies to miners, &c., are estimated to have been of the value of \$10,000,000 for the same year.

The following statement of the production and shipment of copper from the opening of the mines in 1845 will show the development already attained:

*Aggregate shipments of copper from Lake Superior from 1845 to 1862.*

Shipments in			Value.	
1845	pounds..	1,300		\$290
1846	tons..	29		2,619
1847	tons..	239		107,550
1848	tons..	516		206,400
1849	tons..	750		301,200
1850	tons..	640		266,000
1851	tons..	872		348,800
1852	tons..	887		300,450
1853	tons..	1,452		508,200
1854	tons..	2,300		805,000
1855	tons..	3,196		1,437,000
1856	tons..	5,726		2,400,100
1857	tons..	5,759		2,015,650
1858	tons..	5,896		1,610,000
1859	tons..	6,041		1,932,000
1860	tons..	8,614		2,520,000
1861	tons..	10,347		3,180,000
1862	tons..	10,000*		4,000,000

*Shipments of the copper districts—four years.*

	1859.	1860.	1861.	1862.
Keweenaw district	1,910.3	1,910.8	2,151.9	2,726.8*
Portage lake	1,533.1	3,064.6	4,708.6	4,288.9*
Ontonagon	2,597.6	3,610.7	3,476.7	2,706.1
Carp lake		20.5	.....	7.1
Sundry mines		7.6	.....	.....

The production of iron and the export of iron ore in the Lake Superior region were as follows:

	Tons ore.	Tons pig.	Value.
1855	1,445	.....	\$14,470
1856	11,597	.....	92,776
1857	26,184	.....	209,472
1858	31,035	1,627	249,269
1859	65,679	7,258	575,521
1860	116,998	5,660	736,490
1861	45,430	7,970	410,460
1862	115,721	8,590	984,976

The destination of the copper shipped is to Buffalo and eastward, but the iron and iron ore go in part to Cleveland and Pittsburg. Copper is also smelted at Pittsburg to some extent. A very large trade with Lake Superior is conducted at Cleveland, at which point many of these products are first received.

## THE LAKE FISHERIES.

The lake fisheries are described in the Buffalo trade report as being located and successful at a great number of points:

"In the Sandusky bay, in the Maumee bay and Maumee river, in the Monroe bay, in the Detroit river, in the St. Clair river and rapids, in Lake Huron from Huron to Point aux Barques, in the Au Sable river, in Thunder bay above Au Sable river, including Sugar island, in Saginaw bay and river, in Tawas bay, between Thunder bay and Mackinac,

including Hammond's bay, in and about Mackinac at Beaver island and its surroundings, between the De Tour and the Sault, along the eastern shore of Lake Michigan, in Green bay in Wisconsin and Michigan, at Presque Isle, Pennsylvania, in Superior's numerous bays and inlets, are found the principal fishing grounds of the lakes, and the annual catch ranges from sixty to one hundred thousand barrels, valued at four to six hundred thousand dollars. The lake fisheries are only second to the cod fisheries off the Atlantic coast, from Cape Cod bay to Cape Breton, and are a source of very considerable wealth."

The receipts of fish at Buffalo only are fully stated, and the decline apparent in the proceeds of the fisheries received there results from the increased demand for them in the western States generally, and their wider distribution.

*Lake imports of fish at Buffalo.*

1858.....	4, 203		

TRADE OF LAKE ERIE EASTWARD

*Toledo.*

Toledo has within a few years become a point of very extensive shipment of grain and produce eastward. The country adjacent to it, and westward to Lake Michigan, is extremely productive, sending a large annual surplus to distant markets, and the Michigan Southern railroad brings large quantities of flour from Chicago to take water transportation further eastward. In five years, closing with 1862, this road delivered the following extraordinarily large quantities of flour, grain, and other produce, at Toledo:

Articles.	1858.	1859.	1860.	1861.	1862.
Flour .....barrels.	253, 158	379, 610	394, 542	752, 309	882, 576
Wheat .....bushels.	940, 393	1, 024, 026	1, 949, 893	2, 450, 320	2, 850, 694
Corn .....do	266, 229	190, 219	831, 372	200, 440	258, 300
Oats, barley, and rye..	132, 630	88, 006	179, 625	22, 925	187, 345
Pork .....barrels.	51, 212	80, 279	62, 880	91, 738	55, 813
Beef .....do			47, 185	17, 829	32, 225
Cattle .....number.	1, 552	1, 253	1, 641	2, 281	1, 803
Hogs, live .....do	1, 552	962	1, 397	1, 482	3, 006
Hogs, dressed.pounds.	3, 277, 415	4, 728, 175	3, 714, 567	5, 515, 077	6, 345, 224
Pork, boxes .....do					17, 506, 593

It will be seen that the new product of cut pork for European markets appears largely in 1862, evidently in greater part from Chicago.

The Dayton and Michigan railroad, leading from the southwest, in western Ohio, also brought a large amount of produce in 1862:

Flour.....barrels..	158,257	Beef.....barrels..	4,662
Wheat .....bushels..	1,277,006	Pork in boxes....pounds..	5,972,836
Corn.....bushels..	98,422	Dressed hogs....pounds..	529,081
Pork.....barrels..	21,639		

The Toledo and Wabash railroad brought from central Indiana:

Flour.....barrels..	247,389	Pork.....barrels..	60,978
Wheat .....bushels..	2,565,958	Beef.....barrels..	33,124
Corn .....bushels..	2,678,327	Dressed hogs....pounds..	4,302,078
Oats and rye....bushels..	66,239	Cut pork.....pounds..	1,549,267

The Wabash and Erie and Miami and Erie canals delivered at Toledo in 1862:

Flour.....barrels..	217,860	Pork.....barrels..	28,898
Wheat.....bushels..	3,007,204	Beef.....barrels..	3,469
Corn.....bushels..	738,863	Whiskey.....barrels..	21,906
Oats and rye.....bushels..	5,621	Bacon.....pounds..	2,431,371

Together these lines sum a large aggregate of receipts at Toledo, of which only a small portion has before been noted as leaving Chicago eastward by the Michigan Southern railroad. The total quantities received are:

Flour.....barrels..	1,585,325	Whiskey.....barrels..	157,115
Wheat.....bushels..	9,827,629	Hides.....pounds..	6,300,000
Corn.....bushels..	3,813,709	Hogs.....number..	327,680
Pork.....barrels..	167,328	Cattle.....number..	74,840
Beef.....barrels..	73,480	Sheep.....number..	17,400
Lard.....pounds..	125,800	Cloverseed.....bushels..	60,540
Pork in boxes, and bacon, lbs.	27,450,067	Dressed hogs....pounds..	11,176,383

The following is a summary of the receipts of flour and grain at Toledo for three years:

	1860.	1861.	1862.
Flour.....barrels..	807, 768	1, 406, 676	1, 585, 325
Wheat.....bushels..	5, 341, 190	6, 277, 407	9, 827, 629
Corn.....bushels..	5, 386, 951	5, 312, 038	3, 813, 709
Oats.....bushels..	129, 689	41, 428	234, 759
Barley.....bushels..	115, 992	12, 064	63, 038
Rye.....bushels..	37, 787	31, 193	44, 368
Total grain.....	11, 011, 609	11, 674, 130	13, 983, 593

The lines of shipment eastward from Toledo are two propeller lines of six to ten vessels each, one connecting with the New York central railroad at Buffalo, and one with the Erie railroad at Dunkirk. There are also vessels running to Oswego, Ogdensburg, Port Colburne, Canada, and other points. The Cleveland and Toledo railroad takes a large amount of flour on the south shore of the lake to Cleveland.

*Table showing the shipments of flour, wheat, and corn from Toledo in 1862.*

Ports.	Flour.	Wheat.	Corn.
	<i>Barrels.</i>	<i>Bushels.</i>	<i>Bushels.</i>
To Buffalo.....	836,762	5,063,216	1,471,218
Dunkirk.....	488,965	63,050	111,436
Oswego.....	5,818	3,146,824	741,233
Cape Vincent.....	.....	35,250	69,750
Ogdensburg.....	38,706	182,335	341,709
Saginaw and Port Huron.....	550	.....	41,600
Cleveland.....	.....	13,500	45,080
Erie.....	.....	.....	33,160
Montreal.....	.....	142,506	164,174
Kingston.....	.....	560,814	188,717
Toronto.....	.....	.....	73,470
Port Colburne.....	.....	174,279	208,910
Other Canadian ports.....	2,127	.....	50,020
By Cleveland and Toledo railroad.....	174,397	17,533	157,336
Total.....	1,547,325	9,402,327	3,697,808

This is all, therefore, the proper eastward trade of the belt embraced in the general calculation, and it is mainly lake commerce strictly. The larger share of the shipments eastward from Chicago by railroad here return to the lake, though they again take the railroads in New York, the Erie at Dunkirk and the Central at Buffalo. The shipments eastward of other produce, pork, beef and provisions, are not given in the trade report\* from which the preceding statistics have been taken, but it is assumed that the shipments are at least equal to the receipts. Of pork, beef, lard, tallow, &c., they are undoubtedly much greater than the receipts by railroads and canals, since there is no considerable consumption at Toledo, and a large number of hogs are packed in the city. Live stock, hogs, cattle and sheep, were sent eastward mainly by the Cleveland and Toledo railroad. The numbers by railroads and by lake were:

	Cattle.	Hogs.	Sheep.
By lake.....	4, 093	14, 945	1, 156
By railroad.....	85, 370	341, 640	34, 800
Total sent east 1862.....	89, 463	356, 585	35, 956

The value of this produce leaving Toledo eastward is, approximately—

Flour.....	\$7, 736, 625
Wheat.....	9, 402, 327
Corn.....	1, 479, 123
• Pork.....	1, 840, 608
Beef.....	891, 760
Whiskey.....	1, 571, 150
Hides.....	630, 000
Hogs.....	2, 600, 440
Cattle.....	2, 245, 200
Sheep.....	35, 000
Cloverseed.....	240, 000
Pork in boxes and bacon.....	1, 647, 004
Dressed hogs.....	670, 583
Total value.....	30, 989, 820

#### THE TRADE OF DETROIT EASTWARD.

The position of Detroit is one of extensive transit of produce brought by the railroads crossing the State from Lake Michigan, as well as one of importance as a primary market of the produce of the State of Michigan. The Michigan Central railroad carries largely of freight from Chicago, which has once been noted in the statistics of eastward-bound produce. The various branches of this and the other roads in the State make the chief market of their surplus at Detroit. The receipts of flour and grain for three years from all sources were as follows:

Articles.	1860.	1861.	1862.
Flour..... barrels....	862, 175	1, 321, 140	1, 543, 876
Wheat..... bushels....	1, 809, 523	2, 505, 111	3, 058, 242
Corn..... do.....	638, 698	1, 036, 506	583, 861
Oats..... do.....	319, 598	388, 986	402, 247
Barley..... do.....	124, 882	59, 734	165, 200
Rye..... do.....	30, 843	16, 981	18, 807

\* "The Toledo Blade's annual statement of the trade and commerce of Toledo," published by the Toledo Board of Trade.

The detail of other produce is not at hand for incorporation in this statement. It is known to embrace large quantities of miscellaneous produce—wool, butter, hides, pork, beef and provisions, lard, tallow, seeds, &c. The flour and grain stated above would reach a large valuation, which may be stated at the following approximate sums:

Flour.....	\$9, 000, 000
Wheat.....	3, 250, 000
Corn.....	500, 000
Oats.....	160, 000
Barley and rye.....	175, 000

Estimating five millions of dollars as a minimum value of other produce finding its primary market here, the total value is \$18,085,000 furnished at this point to the lake commerce destined for eastern markets.

We find in a late number of the Detroit Tribune a carefully prepared statement of the flour and grain trade of that city for 1863, from which we make up the following table:

## FLOUR.

	Receipts—bbls.	Shipments—bbls.
1858.....	592, 387	505, 917
1859.....	605, 640	478, 918
1860.....	862, 175	809, 515
1861.....	1, 321, 149	1, 261, 289
1862.....	1, 543, 886	1, 445, 458
1863.....	1, 143, 148	1, 033, 150

## WHEAT.

	Bushels.	Bushels.
1858.....	886, 613	791, 870

1860.....	638, 698	592, 044
1861.....	1, 036, 506	989, 309
1862.....	608, 861	342, 887
1863.....	352, 295	139, 616

## OATS.

(1858 not given.)		
1859.....	173, 364	24, 816
1860.....	399, 598	319, 205
1861.....	319, 986	253, 157
1862.....	407, 247	151, 204
1863.....	662, 926	465, 057

## TOTAL RECEIPTS OF FLOUR AND GRAIN REDUCED TO BUSHELS.

1859.....	4, 177, 856
1860.....	6, 441, 639
1861.....	10, 514, 286
1862.....	11, 827, 000
1863.....	8, 527, 666

## LAKE COMMERCE AT BUFFALO.

From the preceding review of the sources of lake freight and its general shipment eastward, it is apparent that it takes many different routes of actual transit. While the chief one is to Buffalo, connecting there with the Erie canal and the New York Central railroad, there is, first, a large diversion by southern routes; the Pittsburg, Fort Wayne, and Chicago railroad, the Southern Michigan, and the Cleveland and Toledo railroads, all carrying in part to the Pennsylvania Central road, and the two last named to the New York and Erie railroad. Next are other railroads, and several propeller lines terminating at Dunkirk, for shipment over the New York and Erie road; and on the north there are several Canadian lines which draw off large quantities of produce either to Canadian markets, or for transit through Canada to Niagara, Oswego, or other points in the United States eastward. Extensive shipments also take the Welland canal for Lake Ontario without touching at Canadian ports.

The freight passing over the Pennsylvania railroad can only be calculated in the business of that road. Those of the Erie road also have no statistical statement at the point of receipt, and it is only at Buffalo that any definite account of receipts by lake, or from the lake district, can be taken. At this point the statistics are full and satisfactory, and in the very valuable report of the Buffalo Board of Trade for 1862 they are given for a series of years to 1862, inclusive. Here are also definite statements of many items of lake exports—fish, copper, iron, &c., which could not be stated in detail from western sources.

Buffalo is a point of the receipt and shipment equally of quantities coming from other primary or producing markets and destined to other markets of consumption. Oswego, Dunkirk, Ogdensburg, and Cape Vincent are the same for the lake trade. Detroit and Toledo are such in part only. The following statements of receipts may therefore be considered as equivalent to shipments also, and may be grouped as exhibiting the receipts at the eastern extremity of the lakes of the proper trade of the lake district:

## BUFFALO.

	1860.	1861.	1862.
Flour.....barrels..	1, 122, 335	2, 159, 591	2, 846, 022
Wheat.....bushels..	18, 502, 649	27, 105, 219	30, 435, 381
Corn.....bushels..	11, 386, 217	21, 024, 657	24, 288, 627
Oats.....bushels..	1, 209, 594	1, 797, 905	2, 624, 932
Barley.....bushels..	262, 158	313, 757	423, 124
Rye.....bushels..	80, 822	337, 764	791, 564
Total grain .....	31, 441, 440	50, 597, 302	58, 564, 078

## OSWEGO.

	1860.	1861.	1862.
Flour.....barrels..	121, 399	119, 056	235, 382
Wheat.....bushels..	9, 651, 564	10, 121, 446	10, 982, 132
Corn.....bushels..	5, 019, 400	4, 642, 262	4, 528, 962
Oats.....bushels..	388, 416	116, 384	187, 284

Rye.....bushels..	244, 311	381, 687	130, 175
Total grain .....	16, 630, 606	16, 435, 330	16, 878, 917

## DUNKIRK.

	1860.	1861.	1862.
Flour.....barrels..	542, 765	736, 529	1, 095, 364
Wheat.....bushels..	500, 888	604, 561	112, 061
Corn.....bushels..	644, 081	230, 400	149, 654
Oats and rye.....bushels..	8, 843	7, 175	10, 173
Total grain.....	1, 153, 812	842, 136	271, 888

## OGDENSBURG.

	1860.	1861.	1862.
Flour.....barrels..	248, 200	411, 888	576, 394
Wheat.....bushels..	565, 022	677, 386	689, 930
Corn.....bushels..	867, 014	1, 119, 594	1, 120, 176
Oats.....bushels..	28, 242	2, 365	3, 336
Barley.....bushels..	7, 105	15, 151	15, 529
Rye.....bushels..	3, 050	3, 888	.....
Total grain.....	1, 470, 433	1, 818, 384	1, 828, 974

## CAPE VINCENT.

	1860.	1861.	1862.
Flour.....barrels..	28, 940	65, 407	48, 576
Wheat.....bushels..	208, 878	276, 610	316, 403
Corn.....bushels..	73, 300	124, 411	219, 369
Oats.....bushels..	27, 299	2, 994	1, 030
Barley.....bushels..	90, 614	53, 877	31, 265
Rye.....bushels..	20, 616	23, 365	762
Total grain.....	415, 707	481, 257	598, 829

*Summary of receipts at terminal lake ports, 1862.*

	Flour, barrels.	Grain, bushels.
Buffalo.....	2, 846, 022	58, 564, 078
Dunkirk.....	1, 095, 364	271, 888
Oswego.....	235, 382	16, 878, 917
Ogdensburg.....	576, 394	1, 828, 974
Cape Vincent.....	48, 576	598, 829
Total.....	4, 801, 738	78, 142, 686

It is clear that this does not cover the total lake trade, not to mention that of the districts of the west south of its proper line, since the receipts at New York alone are larger than the total. The following statement of receipts at New York is from the Buffalo trade report for 1862:

	1860.	1861.	1862.
Flour . . . . . barrels..	3, 892, 358	5, 013, 053	5, 379, 417
Wheat . . . . . bushels..	18, 089, 384	28, 749, 909	28, 897, 110
Corn . . . . . bushels..	12, 999, 659	23, 189, 469	18, 409, 465
Oats . . . . . bushels..	4, 358, 824	4, 031, 395	4, 832, 330
Barley . . . . . bushels..	1, 168, 065	1, 742, 895	1, 627, 790

The flour and grain trade of Buffalo has been large for many years, and until about 1854 it constituted the sole statistical return of that class of trade on the lakes. The following statement of receipts at Buffalo of flour and the several kinds of grain shows the growth of the trade from 1836 to 1862, and that at no time has its increase been so rapid as from 1860 to 1862:\*

*Receipts of flour and grain at Buffalo from the west from 1836 to 1862.*

\* The following incidents connected with the origin of this vast trade are from the Board of Trade report of Buffalo for 1862:

"The history of the produce trade of Buffalo, which is now of such vast magnitude, dates back but a few years, and is in fact the history of the produce trade of the Great West. Previous to 1839 there was very little, if any, grain received at this port for sale. The grain received prior to this date was mostly purchased by millers from the interior of this State, who made their purchases in Ohio and shipped it to place of destination, but the quantities were insignificant as compared with our present grain trade.

"In the fall of 1838 the steamer Great Western brought to this port from Chicago thirty-nine bags of wheat consigned to a miller in Otsego county, which was the first grain shipment from Lake Michigan ports, and the only shipment made during that year.

The trade of Buffalo in pork, beef, bacon, and provisions generally, is as greatly extended in 1862 over former years as is that in flour and grain. The following table gives the total of receipts and the shipments by canal eastward for fourteen years. The shipments by railroads eastward are large, but they cannot be distinguished, being simply classed with other freight:\*

Years.	Receipts of provisions by lake for fourteen years.				Canal exports of provisions for fourteen years.			
	Pork.	Beef.	Bacon.	Lard.	Pork.	Beef.	Bacon.	Lard oil and lard.

The receipts by lake and the exports by canal of whiskey at Buffalo for thirteen years are as follows:

Years.	Imported by lake.	Exported by canal.
1850.....	30,189 barrels..	19,844
1851.....	76,524 barrels..	60,300
1852.....	79,306 barrels..	73,398
1853.....	66,707 barrels..	45,693
1854.....	50,287 barrels..	24,757
1855.....	27,087 barrels..	18,989
1856.....	36,009 barrels..	5,501

"In October, 1839, the brig *Oceola* brought from Chicago, for Durfee & Kingman, then millers at Black Rock, 1,678 bushels of wheat, which was the first grain shipment in bulk from Lake Michigan ports. In 1840 a small schooner called the *General Harrison*, of about 100 tons burden, was laden at Chicago with 3,000 bushels of wheat, for Buffalo, which is said to be the first full cargo of grain exported from Lake Michigan. During the same year the schooner *Gazelle* brought from Chicago 3,000 bushels of wheat, the brig *Erie* 2,000 bushels of wheat, and the schooners *Major Oliver* and *Illinois* each a small cargo. Such was the beginning of the grain trade of the upper lakes which has now grown to such vast magnitude. From this period to the opening of the Illinois canal, 1848, the trade was slowly progressive. In the year 1844 Charles Walker, of Chicago, was said to have had at one time five vessels afloat, loaded with wheat, destined for Buffalo, and this was then considered to be of great magnitude, while, during the season just passed, it has been no unusual event to have two to two and one-half million bushels of grain afloat on the lakes, destined for this port, mostly from Lake Michigan. Previous to 1843 the only grain coming from Lake Michigan was wheat, and it was not until 1848 that any corn worthy of notice was received from Illinois, and what little there was brought to Buffalo came from Ohio."

\* Note appended to this table in the Buffalo Trade report:

"It will be seen from the foregoing table of canal exports from 1849 to 1855, that there was a gradual augmentation of the movement by canal.

"After the consolidation of the roads composing the New York Central, and the opening of the New York and Erie railway, these roads divided the business with the canals, taking the lion's share, but the subsequent action of the canal board in adjusting the rates of toll has gained to the canals a larger share than under the higher rates of toll. If the revenues of the State are to be augmented, a lower rate of toll than the present would secure to the canals a larger tonnage from pork, beef, lard, and bacon than is now carried by the several railway lines."

1857 .....	barrels..	42,140	20,900
1858 .....	barrels..	59,446	51,180

Staves and lumber from the lakes are principally received at Buffalo, so far as they are designed for the market there and eastward. Chicago is a great market for supply of the interior of Illinois, but no port of Lake Michigan exports staves or lumber eastward. The Buffalo Board of Trade report speaks of this trade as follows:

"The lumber and stave trade constitutes a very large portion of the freight carried on the lakes and canals, and is only second to grain. The larger portion of the eastward movement usually take place in mid-summer, when low rates of transportation rule. The principal sources of supply are the States of Ohio, Indiana, Michigan, Canada West, and Pennsylvania, of which more than fifty per cent. is from Michigan alone. In the northern peninsula of that State, in and around Saginaw, at Port Huron, on St. Clair river, are the largest and finest lumber districts in the west and northwest.

"The supply of staves is derived from Ohio, Indiana, Michigan, Wisconsin, and Canada West, of which more than eighty per cent. of the receipts at this port come from these States first named."

The table of comparison of receipts by lake at Buffalo and of exports by canal is for fourteen years.

## LAKE IMPORTS.

Years.	Staves, No.	Lumber, feet.
1846.....	10,762,500	34,536,000
1847.....	8,800,000	18,313,000

1862.....	30,410,252	125,289,971

## CANAL EXPORTS.

Years.	Staves, tons.	Lumber, feet.
1849.....	62,127	40,694,095
1850.....	79,740	45,791,525
1851.....	37,964	55,881,000
1852.....	41,565	63,424,388
1853.....	38,033	61,885,663
1854.....	60,157	59,109,520
1855.....	74,606	48,989,289
1856.....	72,932	38,617,501
1857.....	92,961	43,727,523

1858.....	77,521	31,991,057
1859.....	111,469	94,364 597
1860.....	132,420	91,612,507
1861.....	117,380	33,343,470
1862.....	148,679	88,327,976

The receipts at Buffalo given in the above tables as from the west are altogether by lake, and do not include the carriage by two important railroads—the Lake Shore road, from the southwest, and the Buffalo and Niagara Falls road. Nor do they include the large amount of flour taken over the Niagara river at Suspension Bridge.

The receipts at Buffalo by lake of many other articles are important. Live stock, transported both by lake and railroad, at that point are stated as follows in the trade report from which we quote:

The following will show the receipt of live stock by lake from 1850 to 1862, inclusive:

	Cattle.	Hogs.	Sheep.
1851.....number..	8,211	89,120	.....
1852.....number..	15,926	171,223	16,590
1853.....number..	20,466	114,952	20,466
1854.....number..	19,047	74,276	19,441
1855.....number..	14,049	54,954	26,508
1856.....number..	25,283	72,713	41,467
1857.....number..	39,799	75,174	44,972
1858.....number..	32,522	136,849	41,354
1859.....number..	17,606	42,476	23,695
1860.....number..	18,266	33,350	34,685
1861.....number..	32,275	43,243	39,630
1862.....number..	18,938	25,024	29,033

The sources of supply are Ohio, Indiana, Michigan, Wisconsin, Illinois, and Canada West.

This does not show the extent of the trade in live stock, as a large number are daily coming here by the different railways converging at this point.

The following exhibit of the totals of receipts at the different yards for several years will more nearly approximate to the true state of the trade in live stock. The receipts by lake include the imports by the Buffalo and Lake Huron railway, both of which being deducted from the total receipts at the several yards in each year, will show more nearly the receipts of live stock by the Lake Shore railway for the several years indicated:

	Cattle.	Hogs.	Sheep.
1857.....number..	108,203	307,549	117,468
1858.....number..	136,043	345,731	92,194
1859.....number..	103,337	189,579	73,619
1860.....number..	150,972	145,354	85,770
1861.....number..	141,629	238,952	101,679
1862.....number..	129,433	524,916	105,671
<hr/>			
1862. Receipts.....number..	129, 433	524, 976	105, 671
Less by lake.....number..	18, 938	35, 024	29, 033
<hr/>			
By State Line railroad.....number..	110, 495	489, 952	76, 638
1861. By State Line railroad...number..	109, 354	195, 709	64, 049
<hr/>			
Increase.....number..	1, 141	294, 243	12, 589
<hr/>			

It will be seen by the foregoing statement that of the totals of receipts at the different yards 110,495 cattle, 489,952 hogs, and 76,638 sheep were received by the Buffalo and State Line and Niagara Falls railways, nearly all of which came by the former road.

The magnitude of the trade in live stock when expressed by the valuation in money will be about the following estimate, viz :

129,433 cattle, at \$50.....	\$6, 471, 650
524,976 hogs, at \$7 .....	3, 674, 832
105,671 sheep, at \$3 .....	317, 013

Total valuation.....	10, 463, 495
----------------------	--------------

The valuation of this report is in excess of those before assumed as regards cattle, but otherwise somewhat less. It cannot be far from correct.

Hides were imported by lake as follows :

	No.		No.
1852.....	95,452	1858.....	148,950
1853.....	98,008	1859.....	148,046
1854.....	67,427	1860.....	78,837
1855.....	90,964	1861.....	59,993
1856.....	111,856	1862.....	268,685
1857.....	139,051		

The imports and exports of hides by the Erie canal were as follows :

	Received.	Shipped.
1856.....pounds..	442,525	469,465
1857.....pounds..	130,500	780,855
1858.....pounds..	573,904	569,312
1859.....pounds..	386,789	342,029
1860.....pounds..	137,345	79,431
1861.....pounds..	173,441	189,258
1862.....pounds..	193,503	486,003

The following will show the receipts by lake and canal from 1855 to 1862, inclusive:

	Receipts by lake. Rolls, No.	Receipts by canal. pounds.
1855.....	2,265	1,886,236
1856.....	2,326	1,603,057
1857.....	2,513	714,135
1858.....	4,291	800,863
1859.....	5,342	1,172,260
1860.....	1,508	1,172,417
1861.....	3,778	(*)
1862.....	3,159	1,108,883

The following will show the lake imports and canal exports of wool from 1856 to 1862, inclusive:

	Lake imports. Wool, bales.	Canal exports. Wool, lbs.
1856.....	41,592	2,009,497
1857.....	35,613	1,325,289
1858.....	31,485	1,736,883

\* No report of receipts by canal in 1861.

1859.....	32,480	1,747,556
1860.....	32,108	1,079,942
1861.....	32,480	1,288,394
1862.....	42,619	1,371,098

There is a very considerable amount of wool received here by rail, of which we are unable to obtain any accurate account, which will augment the receipts as given above.

Since the opening of the five great through lines of railway the transportation of this commodity has been divided between these railway lines and the New York canals, the former taking nearly the whole amount moved to eastern markets.

The following table shows the miscellaneous receipts at Buffalo by a comparatively new line—the Buffalo and Lake Huron railroad—connecting with Port Sarnia, at the outlet of Lake Huron:

*Statement showing the receipts at Buffalo by the Buffalo and Lake Huron railway for the year ending December 31, 1862.*

The preponderance of through freights is large, apparently, though it is impossible to distinguish that originating in Canada from that shipped by lake to Port Sarnia, and thence taking the railroad to Buffalo.

The following is a table of general receipts at Buffalo from the lake in 1862, including the Lake Huron railroad, and it embraces the greatest attainable quantities of miscellaneous western freight sent eastward from the lakes exclusively :

Articles.	Quantity.	Articles.	Quantity.
Ashes, casks .....	3, 046	Cider, barrel .....	1
Alcohol, barrels .....	15, 580	Cranberries, barrels .....	138
Apples, dried, barrels .....	846	Copper, packages .....	44
Ale, barrels .....	16	Deer, dressed, No .....	32
Buckwheat, bushels .....	10	Eggs, barrels .....	14, 173

THE EXCHANGE OF GENERAL MERCHANDISE EASTWARD AND WESTWARD AT  
BUFFALO.

The exchanges at Buffalo, conducted at the terminus of the Erie canal, can only be stated from the form of records kept on the canals, indefinitely classified as "products of the forest," "products of animals," &c. The following is the general statement in this form:

*Statement showing the eastward movement of freight from Buffalo, by the Erie canal, for nine years.*

Years.	Products of the forest.	Products of animals.	Vegetable food.	Other agricultural products.	Manufactures.	Merchandise.	Other articles.	Total.	Total value.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.

The shipments of flour and grain by canal, it will be seen, cover the greater share of the receipts before stated, confirming the position assumed, that the receipts and shipments of western produce may be considered as substantially identical.

The following comparative statement shows the shipments of flour and grain by canal from Buffalo for four seasons:

	1862.	1861.	1860.	1859.
Flour ..... barrels..	451,814	306,236	180,853	220,486
Wheat.....bushels..	27,751,786	23,713,713	13,951,458	6,168,068
Corn.....bushels..	22,487,185	19,112,125	10,306,048	2,159,538
Oats.....bushels..	2,164,778	1,705,395	1,282,646	953,169
Barley.....bushels..	201,744	134,341	130,189	308,526
Rye.....bushels..	653,480	337,764	80,822	124,693
Totals .....	53,258,973	45,003,338	25,751,163	9,713,994

The commercial statements prepared at Buffalo supply the deficiency only for a limited period.

The following is a statement of the quantities of produce of all distinguishable articles sent eastward by the Erie canal from Buffalo :

*General exports from Buffalo eastward by canal.*

Articles.	1860.	1861.	1862.

The following approximate calculation of values for this eastward freight sustains the estimate of total values made in the report of the State auditor of New York. That report gives the sum of \$72,131,136 as the value of property "from other States" going eastward on the canal in 1862. It is here shown that nearly the sum of \$60,000,000 in value left Buffalo, and it is clear that the other points of receipts of canal freight—Tonawanda, Black Rock, and Oswego—would add \$12,000,000 to \$15,000,000 in addition.

*Calculation of values of eastward freight by canal from Buffalo in 1862.*

Ashes, casks, 1,059, at \$10 per cask.....	\$10, 590
Lumber, feet, 88,327,978, at \$15 per M.....	1, 324, 920
Timber, cubic feet, 1,475,000, at \$20 per M.....	29, 500
Staves, tons, 148,678, at \$30 per ton.....	4, 460, 340
Pork, barrels, 126,421, at \$15 per barrel.....	1, 896, 315
Beef, barrels, 53,826, at \$10 per barrel.....	538, 260
Bacon, pounds, 4,242,483, at 10 cents per pound.....	424, 248
Cheese, pounds, 80,238, at 10 cents per pound.....	8, 023
Butter, pounds, 103,807, at 15 cents per pound.....	15, 571

Increase in 1863 in flour, “ “ .....	1862	132,067	barrels.
“ “ “ “ .....	1861	818,498	“
Deficiency in totals of grain, as compared with.....	1862	8,190,498	bushels.
“ “ “ “ .....	1861	3,208,433	“

## LAKE TRADE AT TORONTO, CANADA.

The relation held by towns and ports of Canada to the general lake trade, and particularly to the movement of flour, grain and produce eastward, is one of the most interesting and important branches of inquiry into its character. The statistics of many of these points are, however, difficult, if not impossible of collection. The trade is irregular as well as large, and it is often through points of mere transit, along new lines of railroad, or of propeller shipment on the lakes. The principal feature apparent at the outset is the general tendency to return to the United States markets all along the frontier, and even from Montreal.

The following table gives the quantities and destination of the leading exports from Toronto for a series of years :

*Exports of flour and wheat from Toronto, and destination.*

Total .....	178,510	1,192,417	163,737	1,268,629	106,174	933,275

*The following is a more detailed statement for 1862.*

Destination.	Flour.	Wheat.	Barley.	Pens.
	<i>Barrels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>
Oswego .....	10,672	273,383	219,147	7,385
Cape Vincent .....	2,824	106,232	-----	12,024
Rochester .....	450	8,025	-----	-----
Ogdensburg .....	8,385	7,586	-----	4,847
Montreal .....	70,839	483,977	-----	21,570
Quebec .....	645	17,743	-----	1,090
Other ports .....	12,404	36,329	-----	466
Total .....	106,219	933,275	219,147	47,382
Total 1861 .....	163,737	1,268,629	280,806	1,9,810
Decrease .....	57,518	335,354	61,659	72,428
Total 1860 .....	178,510	1,192,417	234,144	148,836

It is apparent that the larger amounts, up to the close of 1860, were sent to United States ports, from Rochester to Cape Vincent, since which year Montreal was the leading destination. As an average, the division is nearly equal between the United States and Canada, outward.

The origin of these quantities is not clearly stated, but it is probable that a share was western State produce, previously entering Canada at Sarnia, the Welland canal or elsewhere, since Toronto appears as a point of destination in many of the statements for western shipping cities.

## MONTREAL.

The produce and grain trade of Montreal also exhibits return shipments to the United States at Portland and Boston, though probably all for further export across the Atlantic. The imports to Montreal of flour and grain in 1862, and the exports to all points, are given in the following statement by the trade and commerce report of that city:

Imports of flour by Grand Trunk railroad.....	405,553	barrels
“ “ Montreal and Champlain.....	196	“
“ “ Lachine canal.....	735,529	“
Total.....	1,141,278	“
Milled in the city.....	220,981	“
Total receipts for the year.....	1,362,259	“
<hr/>		
Shipments of flour direct from Montreal.....	626,070	barrels.
“ “ <i>via</i> Portland and Boston.....	66,123	“
Exports down the river.....	226,177	“
Total exports.....	918,370	“

The exports of wheat show a still larger proportionate diversion to Portland and Boston, undoubtedly for foreign export.

Imports of wheat by Grand Trunk railroad.....	673,779	bushels
“ “ Lachine canal.....	7,952,782	“
Total.....	8,826,561	“
<hr/>		
Exports of wheat <i>via</i> St. Lawrence.....	6,538,053	bushels
“ “ “ Portland and Boston.....	478,595	“
“ “ to river ports.....	199,482	“
Total exports.....	7,216,030	“

[The Montreal Herald's annual review of the trade and commerce of Montreal for 1862.]

## RECEIPTS AT OSWEGO.

The receipts of flour and grain at Oswego have been very large for many years, but no great quantity of provisions or miscellaneous western produce arrives there from the lakes. The following are the receipts of grain, in totals, by each of the leading routes bringing freight to that port, for 1862 and 1863:

*Total receipts of grain at Oswego in 1862 and 1863.*

	1862.	1863.

#### SUMMARY OF THE GENERAL MOVEMENT EASTWARD OF FLOUR AND GRAIN.

The summary of movement eastward in flour and grain having been made up with care in the Buffalo Board of Trade Report for 1862, for years preceding as well as including that particularly examined in this report, that statement will first be considered. It includes several points at which no regular reports have been made in any published or accessible form, and there is reason to accept them in most cases as sufficiently close approximations.

*Statement showing the quantities of flour and grain sent eastward from the lake regions, comprising Ohio, Indiana, Michigan, Illinois, Wisconsin, Iowa, Minnesota, and Canada West, 1856 to 1862.*

The following is a comparison of total quantities of flour and grain moved eastward for seven years, to 1862:

*Table showing the variations in the movement eastward from 1856 to 1862.*

	Flour.	Wheat.	Corn.	Other grain.
1856 .....	3,865,442	19,505,358	14,282,632	4,592,569
1857 .....	3,397,954	16,763,285	8,779,832	2,256,914
1858 .....	4,499,613	21,843,850	10,495,554	5,035,097
1859 .....	3,760,274	16,865,708	4,423,096	5,264,051
1860 .....	4,106,057	32,334,391	18,075,778	7,712,032
1861 .....	6,533,869	46,384,144	29,524,628	10,656,116
1862 .....	8,359,910	50,699,130	32,985,923	10,844,939

Reducing the flour to bushels of wheat, the following table will show the total eastward movement, in bushels, and the receipts at Buffalo for the years indicated:

	Total eastward movement.	Receipt at Buffalo.	Buffalo per cent. of total movement.
1856 .....	57,707,769	26,239,791	45.5
1857 .....	44,789,851	20,052,689	44.8
1858 .....	59,872,566	28,219,855	47.1
1859 .....	44,354,225	22,215,425	50.0
1860 .....	78,652,486	37,133,461	47.2
1861 .....	119,264,233	61,460,601	51.5
1862 .....	136,329,542	72,794,188	53.4

## GENERAL TABLES OF THE TONNAGE AND TRANSPORTATION OF THE ERIE CANAL.

*Capacity, passages, and aggregate carriage of Erie canal boats eastward.*

Years.	Average cargo of boat.	Days' time between Buffalo and Albany.	Toll & freight on a barrel of flour.	Tons delivered at tide-water from the Erie canal.
1841.....	41	9	\$0 71	532,520
1844.....	49	7½	60	799,816
1847.....	67	10½	77	1,431,252
1848.....	71	9	58	1,184,337

\* The arrival at tide-water in these years, being less than the quantity from western States, is proof of one of two things—either that none of the surplus product of this State came by the canal in those years, or that, if it did, its place was supplied from the west.

*Tonnage of wheat and flour eastward to the Hudson river on the Erie canal, with the points of shipment, and the total value.*

Years.	From Buffalo.	From Black Rock and Tonawanda.	From Oswego.	From way stations.	Total tonnage.	Total value.

## COMMERCE OF THE PACIFIC COAST.

Since the era of gold discovery in the mountain ranges which girdle the whole Pacific coast, the United States, England, and Russia have made nearly equal advances in colonization in that quarter of the world. England is firmly planted in the Australian colonies and British Columbia; Russia has annexed Manchooria and the island of Saghalien, which, with her possessions in America, almost constitute a dominion of the North Pacific ocean; California and Oregon, with the settlements converging to the harbors of San Francisco and Puget's sound, have become an important section of the United States; and France probably finds a motive for Mexican intervention in the circumstance that her power in the New Pacific World is limited to the Society Islands and the recent successful crusade in Cochin China.

A review of these results of Pacific colonization will be the best illustration of existing and prospective commerce.

### THE AUSTRALIAN COLONIES OF ENGLAND.

The statistics of the Australian colony of Victoria and of the State of California present many analogies.

At the commencement of the golden era in Victoria, 1851, the wool-created colony of Victoria contained 77,345 people who owned 6,032,783 sheep, 378,806 head of cattle, and 21,219 horses, and the wool-created city of Melbourne had a population of 25,000 souls. In eleven years the population of Victoria, under the gold impulse, has increased to 550,000; the average exports and imports are, respectively, £12,000,000, and the population of the city and suburbs of Melbourne has increased to 138,000.

In 1849 California had a population not exceeding 75,000; its industry and production were pastoral, the chief export being the hides of cattle; and San Francisco was an insignificant seaport. In 1864 the population of California and its colony, the Territory of Nevada, cannot be less than 500,000, and the average exports and imports are, respectively, \$55,000,000 per annum.

The average annual exports of treasure from Victoria and California since 1854 have closely approximated, being nearly \$40,000,000 annually. In both countries the aggregates have decreased with the diversion of labor to agriculture and manufactures. In Victoria, the culminating point was in 1856, when the export of gold was 2,985,696 ounces, of the value of £12,000,000; and the least export has been during 1863, viz., 1,634,377 ounces, of the value of £6,537,508. In California, the greatest annual export was, in 1853, \$57,331,034, while, for the last two years, California alone has not exported more than \$35,000,000 per annum.

The entire gold product of Australia and New Zealand stood, in 1862, as follows:

Victoria.....	1,711,508 ounces.
New South Wales.....	584,519 ounces.
New Zealand.....	445,902 ounces.

---

2,741,929 ounces.

Or nearly as much as Victoria alone produced in 1856. So with California. When credited with the production of Nevada, Oregon and British Columbia, which the course of trade brings to California for exportation to different parts

of the world, the aggregate retains and even exceeds the amount recorded in 1853; but California, like Victoria, has found more productive industries than gold mining.

Both countries now produce an immense number of consumable articles which they used formerly to import and pay for with gold. A summary of these new sources of value in Victoria is compiled from the London Statistical Journal, for December, 1863. In 1856, the year of the greatest production of gold, the colony had only 115,135 acres in cultivation; in 1862, 540,000 acres. The crop of wheat has increased from 1,148,011 bushels in 1856, to 4,152,000 bushels in 1862, with a saving of 60 per cent. in price. Oats increased from 614,679 to 2,633,692 bushels, with a gain in reduction of price of £400,000. The same comparison extends to all agricultural productions—the local supply now effecting a saving of gold export in lesser articles of £5,000,000.

Great changes may be anticipated from the success of the vine and tobacco cultivation. In 1843 four acres were planted by a Swiss vigneron, near Geelong. In 1862 there were 1,464 acres planted with 3,818,335 vines. (one-half only in bearing condition,) from which 16,972 cwt. of grapes were sold, and 47,568 gallons of wine manufactured. In 1862, 220 acres were planted to tobacco, yielding 2,552 cwt.

The successful manufactures of Victoria are machinery for mines, carriages, refined sugar, spirits, woollens, ale, furniture, soap, candles, biscuits, brick and tiles, cement and lime, leather, hats and caps, iron rolling mills, jewelry, paper bags and pasteboard boxes for tradesmen.

The bank circulation for 1862 was £1,605,253.

In railroad construction Victoria is in advance of California. At the close of 1863 the colony had 351 miles of railroad in operation, constructed by the government, and yielding a revenue of £433,615, against £297,949 in 1862, when the total mileage in operation was only 220 miles. Mr. H. S. Chapman, of Melbourne, one year ago, (in January, 1863,) wrote as follows on this interesting subject (see London Statistical Journal for 1863, p. 439:): "In the early part of 1862, the railway from Geelong to Ballarat was opened, but the double line not being completed, the department was not in a condition to carry goods to any extent. In October the Melbourne and Murray River line was opened to Sandhurst. The distance of the two is, in round numbers, 200 miles. There are also short railways having their termini at, and radiating from, Melbourne, constructed by four distinct companies. These connect the surrounding suburbs with the city, and are of great convenience to the inhabitants; but it is only one of these (that which connects Hudson's Bay with the metropolis) which is of great importance. The total extent of railways in operation is 221 miles, [351 in January, 1864.] The government has in its hands the means of completing the northern line to Echuca, on the banks of the Murray, where the Camtaspe empties itself into that river. The embouchure of the Goulbourne is only a little to the eastward. This line measures a trifle over fifty miles. These government lines have been constructed with borrowed money, as everybody knows, £7,000,000 raised in England, £1,000,000 raised in Victoria. There was a premium of £385,000, and they would have been constructed for some hundreds of thousands less than the original estimates had not the government obtained the sanction of the legislature to purchase the Geelong line of a private company, which, with the repairs to that line, will require about £300,000, or perhaps £400,000 in addition. This the government have authority to raise in the colony. Upon these loans the annual charge is half a million. It is not easy as yet to ascertain what the net revenue from the government lines will be. They are scarcely yet in a condition to do all the work they will ultimately be capable of, and undoubtedly the revenue will be greatly increased when the line is open to Echuca. The revenue at present is £45,000 per month, and is increasing. This will give £540,000 for the year. The working expenses

are roughly estimated at one-half, but I am informed they will not exceed, and will probably be kept below, £250,000. In round numbers we may call the net revenue £300,000 for the year 1863, [it was £433,615.] to go towards the payment of the interest which is charged on the consolidated revenue. This net revenue is  $3\frac{3}{4}$  per cent. on the capital. I do not think there can be any reasonable doubt that in two or three years the net revenue will be worked up to the interest, or 6 per cent. I am not, however, upon conjecture or speculation, but upon the facts as I find them: and the fact with which I am now to deal is a deficiency of £200,000, which the people of the colony now have to meet by taxation. Not that we should care to be taxed less if that were not the case, but we should have £200,000 more to expend on other improvements. Is that £200,000 a loss to the community? I answer it is not. It is in the nature of a guarantee premium, to secure the great economical gain to the country from the cheapness of transport generated by these railways. There is no country in the world which has illustrated, and still illustrates, this so perfectly as Victoria. Our existence has been of such short duration, and our progress so rapid, that everything may be said to have passed before the eyes of everybody. We can all recollect our roads in the condition in which General Wade is said to have found them in the north of England. In 1852-'53 we saw these roads "before they were made"—1854-'58 was the era of macadamization—1859-'62 that of railways. The revolution from the second to the third period was not so marked as from the first to the second. More than £100 per ton has been paid for the carriage of goods to Bendigo; £40 and £50 was not uncommon. As MacAdam moved, Melbourne cartage got down to £18, then to £12, and latterly to £5 and £6 per ton. We now think that enormous. The government charge is 50s. to Sandhurst, and 42s. to Ballarat, and in proportion for shorter distances, and the public are actually agitating for reduced rates. At present I have not data to make an exact calculation of the gain, but I can make one which will certainly be on the safe side. At present, as I have said, the goods traffic is in its infancy; but if we take the twelve months at no more than the first two months, the number of tons conveyed will be, on the Sandhurst line, 128,073; on the Ballarat line, 72,840; on both, 200,913. Deducting one-third for short distances, it is equal to 134,000 tons carried the whole way. In 1860 the winter rate of cartage to Bendigo was £6 10s., the summer rate £5 10s.; mean rate £6 per ton, and even then the carriers had the benefit of twenty miles of railway. In 1861 the winter rate was £5, the summer rate £4 5s.; mean, £4 12s. 6d. This makes an average saving of £2 6s. 6d. per ton, or a total of £311,550 gain, against the revenue deficiency of £200,000. In this calculation nothing is allowed for the superior condition of the goods when delivered, nothing for time, nothing for the absence of depreciation, which used to be considerable; nothing for passengers and their convenience; and nothing for the revenue of the Echuca line, when completed, for the £200,000 is charged on the whole. Taking all these into account, I do not doubt that the economical advantage distributed over the whole country is at least *half a million*, secured at a guarantee or insurance charge of £200,000; and as the charge is not subject to increase, but may be reduced as the traffic extends, the advantage must be deemed progressive. The Echuca line will add a fourth to the length of the lines, and ought, consequently, to add one-fourth to the net revenue; that will reduce the deficiency to £125,000; but it will also add one-fourth to the sum of economical advantages. Englishmen, who only know the change from our four-horse coaches, so splendidly appointed and worked, to the railway, can form no conception of the revolution which we have experienced. It is a change from misery to comfort—a sudden jump from the eighteenth to the middle of the nineteenth century."

This extract is given without paraphrase, on account of its suggestiveness in regard to the indispensable internal improvements of mining districts. California has recently opened fifty miles of railroad eastward of San Francisco.

The leading statistics of the Australian group of English colonies are as follows:

Colonies, &c.	Area, square miles.	Population according to latest return.	Revenue raised in the colony in 1860.	COMMERCE IN 1860.	
				Value of imports.	Value of exports.
New South Wales .....	323,437	365,635	£1,309,000	£7,519,000	£5,072,000
Victoria .....	86,831	548,944	3,039,000	15,094,000	12,963,000
Queensland .....	678,000	56,000	179,000	742,000	710,000
South Australia .....	383,328	126,830	439,000	1,640,000	1,784,000
Western Australia .....	978,000	15,691	61,000	169,000	89,000
Tasmania .....	26,215	90,211	268,000	1,006,000	1,025,000
New Zealand .....	166,259	155,070	465,000	1,548,000	589,000
	2,582,070	1,358,381	5,760,000	27,718,000	22,232,000

The revenue of Victoria since 1860 has been nearly £3,000,000. In 1863 it was reduced to £2,722,299, but will reach the former point in 1864. The sources of the revenue for the year ending with December, 1863, are thus presented by the Melbourne Argus of January 25, 1864:

I.—Customs:	Rate of impost.	Revenue for 1836.
Spirits .....	10s. per gallon.	£494,045
Wine .....	3s. per gallon.	44,073
Beer .....	6d. per gallon.	53,537
Tobacco, manufactured .....	2s. per pound.	120,320
Tobacco, unmanufactured .....	1s. per pound.	
Cigars .....	5s. per pound.	10,118
Tea .....	6d. per pound.	92,780
Sugar .....	6s. per cwt.	118,736
Coffee .....	2d. per pound.	11,918
Opium .....	10s. per pound.	23,644
Rice .....	2s. per cwt.	15,560
Dried fruits .....	10s. per cwt.	16,633
Hops .....	2d. per pound.	5,525
Malt .....	6d. per bushel.	8,445
Sheepwash tobacco .....	3d. per pound.	5,218
Registration fees, ("unit of entry") .....	2d. per package.	28,026

Total from customs .....

1,048,586

## II.—Excise:

Spirits distilled in Victoria .....	£6,181
Publicans' licenses .....	54,625
Spirit merchants' licenses .....	14,123
Auctioneers' licenses .....	4,350
Brewers .....	978
All other licenses .....	9,144

Total from excise .....

89,403

## III.—Income from public works:

Railways .....	£433,615
Electric telegraph .....	*24,222

Total from public works .....

457,837

IV.—Territorial :	
Sales and leases of lands, miners' rights, &c.....	£750,603
Export duty on gold, 1s. 6d. per oz.....	121,508
Total territorial.....	872,111
V.—Post office.....	
	£117,664
VI.—Ports and harbors :	
Tonnage, pilotage, &c.....	£20,453
VII.—Miscellaneous :	
Fees, fines, and forfeitures, &c.....	£116,240
Grand total.....	£2,722,299

The expenditure of Victoria covers the whole field of what in the United States is divided into national and state expenditure. Taxation of the entire population of the United States in equal measure would produce a revenue of \$800,000,000.

Hittell, in his *Resources of California*, (1862,) estimates that the inhabitants of Nevada, Oregon, Washington, the western part of New Mexico, (now organized as Arizona,) the northwestern part of Mexico, British Columbia, Vancouver's island, and the Hawaiian islands, are an aggregate population of 1,700,000, and destined to an identity of commercial interests.

San Francisco and California hold the same relation to this Pacific population which Melbourne and Victoria bear to the 1,400,000 inhabitants of the Australian group of English colonies. Omitting further comparative statements, it is now proposed to exhibit the present nature and relations of the Pacific trade which concentrates at the city of San Francisco. This will be done chiefly by compilations from the *San Francisco Mercantile Gazette*, showing the transactions and situation of 1863.

#### THE TRADE OF SAN FRANCISCO.

The following table shows the destination and value of exports from San Francisco, exclusive of the precious metals, during the past three years :

To—	1861.	1862.	1863.
New York.....	\$1, 605, 034	\$2, 245, 633	\$2, 736, 435
Boston.....	98, 345	1, 192, 489	1, 505, 690
Great Britain.....	2, 838, 004	1, 355, 217	1, 697, 822
Australia.....	1, 056, 401	332, 335	487, 685
British Columbia.....	1, 177, 152	2, 195, 903	1, 746, 801
Mexico.....	1, 094, 930	1, 014, 639	1, 819, 652
Peru.....	163, 264	271, 251	216, 206
China.....	711, 841	722, 229	1, 246, 254
Hawaiian islands.....	288, 877	293, 370	357, 369
Japan.....	15, 577	21, 598	43, 901
Other countries.....	838, 647	920, 630	920, 584
	9, 888, 072	10, 565, 294	12, 877, 399

This table includes the productions of Oregon, British Columbia, and northern Mexico, as well as of California.

The Gazette adds the following comparative statement of the value of different articles of California produce exported during the past three years :

Articles.	1861.	1862.	1863.
Barley.....	\$361,452	\$131,282	\$65,044
Beans.....	10,214	40,599	11,608
Bones.....	1,984	5,400	171
Bran.....	1,131	3,061	1,871
Bread.....	64,892	69,805	65,290
Copper ore.....	135,240	370,200	719,300
Fish.....	21,828	21,868	11,285
Flour.....	858,425	688,234	767,270
Glue.....	7,320	1,240	930
Hay.....	4,683	10,998	11,914
Hides.....	444,995	947,253	924,567
Horns.....	2,350	2,484	1,807
Leather.....	3,605	11,040	3,773
Lime.....	357	968	2,463
Lumber.....	69,931	149,560	123,084
Mustard seed.....	1,857	2,417	11,230
Oats.....	156,879	72,045	130,602
Potatoes.....	23,016	12,936	21,828
Quicksilver.....	1,079,850	1,138,961	1,073,078
Skins.....	36,652	25,011	56,338
Silver ores.....	211,345	34,740	118,109
Tallow.....	35,658	37,740	80,170
Wheat.....	2,702,434	1,372,572	1,754,116
Wine.....	8,000	25,836	80,141
Wool.....	519,577	1,009,194	1,119,098
Sundries of manufacture.....	27,145	23,843	45,565
Sundries of agriculture.....	4,936	2,496	7,637
	6,795,758	6,211,788	7,208,289

The destinations of these California products were classified as follows :

To—	1861.	1862.	1863.
New York and Boston.....	\$1,283,381	\$2,465,831	\$2,879,897
Great Britain.....	2,744,537	1,296,889	1,620,812
Australia.....	1,078,118	287,975	398,018
China.....	566,860	589,907	1,010,931
Mexico.....	453,953	530,927	560,312
Peru.....	158,774	216,276	162,094
Hawaiian Islands.....	42,527	47,135	66,930
British Columbia.....	71,315	373,611	260,746
Other islands.....	396,283	394,237	249,449
Total.....	6,795,758	6,211,788	7,208,289

Including exports of treasure, the entire exports of California productions during three years, may be classified as follows:

	1861.	1862.	1863.
Products of the mine.....	\$42,103,193	\$44,105,662	\$47,932,398
Products of agriculture.....	3,265,471	1,645,350	2,013,975
Products of the herd.....	1,041,217	2,027,082	2,182,155
Products of the forest.....	69,931	149,560	134,086
Products of the sea.....	21,828	21,868	11,285
Products of manufacture.....	962,876	798,191	873,854
Products of the vine.....	8,000	25,836	81,456
Total.....	47,472,217	48,773,549	53,280,209

The following table shows the value and destination of treasure shipments from San Francisco during the years 1854 to 1863:

Years.	To eastern ports.	To England.	To China.	To Panama.	To other countries.	Total.
1854.....	\$46,533,166	\$3,781,080	\$965,887	\$204,592	\$560,908	\$52,045,633
1855.....	38,730,564	5,182,156	889,675	230,207	128,129	45,161,731
1856.....	39,895,294	8,666,289	1,308,852	258,268	573,732	50,697,434
1857.....	35,531,778	9,347,743	2,993,264	410,929	692,978	48,976,697
1858.....	35,891,236	9,265,739	1,916,007	299,265	175,779	47,548,026
1859.....	40,146,437	3,910,930	3,100,756	279,949	202,390	47,640,462
1860.....	35,719,296	2,672,936	3,374,680	300,819	258,185	42,325,916
1861.....	32,628,011	4,061,779	3,541,279	349,769	95,920	40,676,758
1862.....	26,194,035	12,950,140	2,660,754	434,508	322,324	42,561,761
1863.....	10,389,330	28,467,256	4,206,370	2,503,296	505,667	46,071,920
Total.....	341,659,147	88,306,054	24,957,524	5,267,602	3,516,010	463,706,338

The imports, answering to these exports, are, in some measure, indicated by the following statement of the tonnage which arrived at San Francisco during the year 1863:

From—	No. of vessels.	Tons.
Domestic Atlantic ports.....	102	114,963
Domestic Pacific ports.....	1,414	253,017
Great Britain.....	30	22,827
Panama, New Granada.....	39	84,871
France.....	13	5,628
Hamburg.....	11	4,115
Australia.....	28	13,962
China.....	44	32,888
Japan.....	3	893
Manilla.....	7	5,752
Calcutta.....	3	1,335
Java.....	3	981
Malaga.....	1	295
Rio Janeiro.....	4	1,034
Chili.....	4	1,751
Peru.....	11	2,977
Mexican ports.....	66	20,845

## STATEMENT—Continued.

From—	No. of vessels.	Tons.
West Indies .....	2	800
British Columbia .....	44	46,605
Hawaiian Islands .....	18	6,520
Society Islands .....	13	2,176
Central America .....	13	3,771
Russian Possessions, northwest coast.....	9	3,146
Russian Possessions, Asia.....	4	737
Whaling voyages.....	13	4,504
Total arrivals.....	1,899	641,393

*Recapitulation for the year 1863.*

	No. of vessels.	Tons.
American vessels arrived from domestic ports .....	1,516	367,980
American vessels arrived from foreign ports.....	238	214,655
American vessels arrived from whaling voyages .....	12	4,304
Foreign vessels arrived from whaling voyages.....	1	200
Foreign vessels arrived from foreign ports .....	132	54,254
Total.....	1,899	641,393

By a return from the Register's office of the Treasury Department, the total value of foreign imports at San Francisco for the year ending June 30, 1863, was as follows: In American vessels, \$7,348,969; in foreign vessels, \$3,333,173; total, \$10,682,142. To which add for the third quarter of 1863, in American vessels, \$1,937,441; in foreign vessels, \$750,956; making an aggregate for the period of fifteen months ending September 30, 1863, of \$13,370,539. During the same period of fifteen months the value of foreign imports to Oregon are stated on the same authority at \$79,764. There is no return from Puget's Sound district, though estimated to import at least \$100,000 yearly. These custom-house returns indicate an annual importation on the Pacific coast of \$10,826,957.

The present tendencies of the Pacific trade in regard to different countries are worthy of observation.

To New York and Boston the leading articles of export are hides, wool, and even copper:

Articles.	1860.	1861.	1862.	1863.
Copper ore .....		11,155	72,938	109,470
Hides .....	200,116	177,998	315,751	308,189
Wool .....	11,767	14,791	21,911	16,078

The exportation of wheat, which in 1860 was 203,528 bags, fell to 19,288 in 1861, and is not reported for the last two years.

To Great Britain the exports from California chiefly consist of wheat and flour, as follows:

Articles.	1860.	1861.	1862.	1863.
Flour.....barrels.	36,375	70,945	8,582	12,200
Wheat.....bags.	458,495	1,022,664	590,485	844,022

To the Sandwich Islands and Mexico, lumber is the leading export, amounting in 1863 to 772,794 feet for the Sandwich Islands, and 1,152,380 feet for Mexico.

The export of lumber to Peru reached 1,936,156 feet in 1862, and 890,009 feet in 1863.

China is also a considerable market for the lumber of the Pacific coast, receiving 2,659,190 feet in 1862, and 2,709,733 feet in 1863. The San Francisco Mercantile Gazette of January 12 remarks: "The shipments of California products to China during the year just ended have been very much greater than ever before. Flour, wheat, lumber, bacon, butter, cheese, lard, wine, vegetables, &c., have all been sent forward in quantities that indicate a rapidly expanding market. The people of that country who have lived among us these many years, much to the disgust of certain political classes, and in spite of the most determined efforts to drive them away, have done us a great service in teaching their countrymen at home the use and value of our products, and in overcoming their ancient prejudices against 'barbarian' diet. The trade requires judicious management, and is in good hands. We regard its present aspect as perhaps the most important feature in our outward commerce which the past year has developed. Its progress may be comparatively slow for some time to come, and may yet undergo many vicissitudes; but once fairly inaugurated, as indeed it now seems to be, the wants of a population almost illimitable give assurance of a market for any surplus we may have to spare at prices reasonably remunerative."

To Australia and New Zealand the leading export is lumber; the former demand for breadstuffs being much below the exportation of 1861.

The East Indies send to California coffee, sugar, rice, hemp, spices, &c., but take little in return except gold and silver.

The exports of California produce to British Columbia, New Granada, Chili, Society Islands, Manilla, Japan, France, Cape of Good Hope, Central America, and Russian possessions, are reported by the San Francisco Gazette as follows:

Articles.	1860.	1861.	1862.	1863.
Barley.....bags.	99,243	92,814	39,034	27,303

The table of treasure shipments indicates a great change of destination since 1861. Then the shipments to our Atlantic cities reached \$32,628,011, while during 1863 they amounted to only \$10,389,330. The treasure shipments to England increased from \$4,061,779 in 1861 to \$28,467,256 in 1863.

The attention to wool-growing on the Pacific coast during the last five or six years has resulted in a very rapid increase of the crop in California. In 1857 the whole product of the State was only 1,000,000 pounds; now it is estimated at 7,600,000 pounds. The shipments of wool from San Francisco have been as follows for the last four years:

	1860.	1861.	1862.	1863.
	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>

The manufactures of California are unexpectedly prosperous, and materially reduce importations. Cordage, cement, blankets, white and colored flannels, cloths and cassimeres, gunpowder, leather, malt liquors, tar, rosin, turpentine, paper, soap, wine, are now manufactured with a degree of success which will probably control the home market.

The California supply of coal, chiefly from the Mount Diablo mines, is on the increase, reaching 37,000 tons in 1863; but the demand is so great as to warrant shipments from Vancouver island, Bellingham Bay, and Chili, and even from England and Australia. The monthly consumption from the Diablo mines during the last three months of 1863 was fully 6,000 tons per month.

The product of gold and silver on the Pacific coast is estimated at \$55,000,000 for 1863, of which fully \$7,000,000 was received from British Columbia. The total coinage at the San Francisco mint during the year 1863 was \$20,251,417 97.

It is contended by the commercial journals of San Francisco that the currency of California, which is mostly coin, is more abundant in proportion to population and wealth than that of the Atlantic States. The *Mercantile Gazette* of February 12, 1864, represents the amount in circulation on the Pacific coast as \$25,000,000; that the population of California with adjoining State (of Oregon) and Territories is 600,000, which gives forty-one dollars and sixty-six cents *per capita*. The total value of real and personal property on the Pacific coast is estimated by the *Gazette* to be \$340,000,000, of which \$25,000,000 is about seven per cent. The currency of the loyal States east of the mountains, notwithstanding its expansion to meet the exigencies of the nation, is below those ratios to population and property. The population of the loyal States and of the insurrectionary districts which are held by the army (in June, 1864) is 24,000,000. If the currency was at the California standard—\$41 *per capita*—its aggregate would be \$984,000,000, and a proportion of 7 per cent. upon the total valuation of property would give an equal aggregate.

#### VANCOUVER'S ISLAND AND BRITISH COLUMBIA.

Except Australia, British Columbia, and the islands adjacent to its coast, would be the only important colonial occupation of the Pacific coast by Great Britain—Mauritius, Hong Kong, and Labuan having their chief significance in the convenience of the mercantile marine. The station of England on the northwest coast of North America will prove of great value in the future struggle for commercial, if not political, ascendancy in the Orient.

The island of Vancouver, with its excellent harborage in Puget's sound, is in the latitude, and is not unlike the climate, of Ireland. The coldest weather of the year is in December; but little snow falls, disappearing usually in a few days. The frosts which precede and follow penetrate the soil but a few inches, and the lakes are covered with ice sufficiently strong to bear the skater only during a few weeks. The climate is mild and equable, but warmer in summer than in England. Cattle, horses, sheep, and hogs are seldom housed. Probably not more than half the surface of the island is adapted to agriculture, but the soil is of excellent quality, and all other conditions favorable. Wheat, oats, barley, hay, and vegetables are produced, and the almost evergreen turf is well suited to grazing. The section of country now in course of agricultural settlement is within sixty miles of Victoria, the leading town of the island, and is known as the district of Cowichan. The conditions on which land may be taken there, as elsewhere in Vancouver's island, are easy. A single man may pre-empt one hundred and fifty acres; a married man, with his wife in the colony, two hundred acres; and for each child under ten years of age, ten acres additional. The government price for the land is one dollar an acre. If unsurveyed land be pre-empted, the settler has to pay for it when surveyed. If

surveyed, he has three years in which to pay the purchase money. Another condition makes it incumbent on the pre-emptor to occupy and improve his claim. When two dollars an acre is expended in improvements the government will make a title; but not so unless the settler has resided on his claim two years.

Vancouver's island is the naval station of England in the North Pacific. The harbor of Esquimalt, three miles from Victoria, and near the Straits of San Juan, is a magnificent haven, fit to shelter a whole navy in safety. The forests of the island are an inexhaustible resource for ship-building, while the coal mines at Nanaimo, sixty miles from Victoria, on the sheltered navigation of the Gulf of Georgia, are of the best possible quality—bituminous and extensive. The seams now worked at Nanaimo are, respectively, three feet ten inches, five feet, and two feet five inches, and have been traced to the northwest extremity of the island, where Johnson's straits furnish excellent land-locked harbors. Up to 1858 the Hudson Bay Company had, in nine years, taken 63,000 tons; but, during 1863, 22,000 tons have been exported to San Francisco alone, where it found a remunerative sale, though the price at the pit-mouth is six dollars per ton. Behind Nanaimo a remarkable natural cleft known as Albeoni canal leads into Barclay sound, where a London firm have established saw-mills, which, during nine months of 1863, cut and exported 15,000,000 superficial feet of the finest planking from the Douglas and other pines. These details of the coal and lumber trade indicate the great advantages of Vancouver for the construction, repair, and coaling of vessels.

Northward of Puget's sound the coast of British Columbia is so broken with fiords or inlets, and sheltered by islands, as to present the greatest possible advantages for fisheries and a coasting trade. The salmon, herring, and other fisheries of this region will equal those of Norway.

British Columbia, in respect to capacity for agriculture, may be compared with Scotland, while its mineral resources are destined to a development fully equal to the gold product of the colony of Victoria.

The progress of the colony of British Columbia, during the first four years of its organization, will be illustrated by a statement of revenue which is raised almost entirely by customs duties levied at New Westminster, or the mouth of the Frazer river, and by a mining license of twenty shillings per year for each man. During the first year of the existence of British Columbia as a colony—that is, to the 31st of December, 1859—the customs duties amounted to £18,464, the receipts from other sources being quite trifling. In the succeeding year, 1860, the customs receipts reached £30,416, and those from other sources, such as land sales, port and harbor duties, licenses, &c., nearly £23,000 more. In 1861 the receipts from customs were £41,177; from other sources, £38,192. In 1862 the customs receipts were estimated by Governor Douglas at £58,980; other sources, £47,050. One-third of the gross revenue is devoted to the construction of roads and bridges, which are objects of first necessity in a rugged mining country. By the improvement of the roads from the mouth of the Frazer river to stations three hundred miles distant, the cost of transport has been reduced to about twenty shillings a ton, which is 300 per cent. less than in 1860.

The land system of British Columbia is identical with that of Vancouver's island, the price of land being 4s. 2d. per acre on easy terms of payment.

The mineral wealth of British Columbia, especially the interior district called Cariboo, which parts the waters of the Columbia, Frazer, Saskatchewan, Athabasca, and Peace rivers to every point of the compass, has lately been attested by papers read at the London Geographical Society, and is confirmed by the returns of treasure exports at New Westminster and Victoria.

Allen Francis, esq., United States consul at Victoria, Vancouver's island, states that the export of gold from that port during the year 1863, as obtained from reliable sources, amounted to \$2,935,170 16, and he computes that an

equal amount has been taken away in private hands, or about \$6,000,000 as the total export.

Mr. Francis communicates the following statistical tables :

*Table of imports to Victoria, Vancouver's Island, for the years 1861, 1862, and 1863.*

	1861.	1862.	1863.
From San Francisco.....	\$1,288,359	\$2,345,066	\$1,880,117

## RUSSIA IN ASIA.

In 1858, before the English and French fleet had reached the Pei Ho, the Russians appropriated the best results of the campaign. In May of that year General Mouravieff concluded a convention at Algoor with the Chinese authorities, which enlarged Siberia almost to the absorption of Manchooria—securing to Russia a region abounding with the elements of commerce. Along the Amoor river, fed by numerous navigable tributaries and capacious enough to admit steam vessels two thousand miles from its mouth, the Russo-Chinese treaty fixed the dividing line of the two empires, only varying from its channel by a line running to the tide-waters of the Pacific at a point which gives to Russia the best harbors on the sea of Japan. The territory thus acquired can hardly be estimated under three hundred thousand square miles, rich in the products of the forest and in mineral wealth. In securing Manchooria, or the best half of the native land of the tribes, whose dynasty is dominant in China, Russia has virtually pushed her frontier to the wall of China.

In the wilderness of Central Asia, west and northwest of China proper, Russia is constantly making territorial acquisitions. Even Khiva, Kokand and Khorassan are dependencies of the Czar. Indeed, the desert of Gobi on the east, and the Himalayan range and the frontiers of Afghanistan and Persia on the south, are natural boundaries within which Russian influence is paramount. Mongolia, Thibet, Turkestan, are at this moment less members of the Chinese than of the Russian Empire. This portion of Asia, known historically as the birthplace and scene of empire of Genghis Khan, has a considerable capacity for commerce. Stretching from the Suliman range to Siberia, from the Caspian to the sea of Okhotsk, it certainly contains a considerable population, possibly a large one, which wants clothes, weapons, iron instruments—most of the appliances and some of the luxuries of civilization—and can give in exchange hides, horns, goats' wool, camels' hair, tallow, silk, borax, gems, metals, drugs, and all that wealth which is sure to be discovered in very wide tracts of earth. "Englishmen think of the provinces of Central and Northern Asia," observes the London Economist, "as if they were covered with desert, but they comprise every kind of climate, and contain every variety of mineral, while over half their extent fat grapes grow in the open air, and every traveller records the luxurious quality of their fruits."

Upon the question of practical communications with Central Asia, the same authority reaches conclusions which demonstrate the value of the Amoor river and its tributaries. "The true route towards these countries," continues the writer in the Economist, "is through Russia and China, for it is the only one on which we have much help from water communication. By following the

Yangtsee and Hoangho to the utmost limit of navigation, we bring ourselves to points from whence the Chinese merchants have traded with the people east of the Himalayas—points from which traffic in wheeled carriages may begin. In northern Asia, the true access is by the Amoor, a river which, if travellers may be trusted, is navigable for more than two thousand miles, and cleaves into the very heart of that secluded region. The western division, which we call Central Asia, as if Thibet were not more central, is cloven by the Jihon, which flows from Bokhara to the Caspian, and the navigation of which has never been fairly tried. \* \* \* The notion of opening the Amoor has been repeatedly entertained at St. Petersburg, and if all sovereign rights were fully reserved, and the advantages of such a course to the revenue made quite clear, the government might be disposed to go gradually much further. To enfranchise the great eastern Asiatic rivers by agreement with St. Petersburg and Peking should be the line to which our efforts ought to be directed."

Proceeding upon such a commercial policy in 1858, Lord Elgin, who was fully conscious of the advantages gained in the Russian treaty of May, obtained from the Chinese government concessions of free travel through the empire and of a port of Shingking, at a point easily attainable from Shanghai and open to the importation of foreign manufactures. These concessions have been extended to American traders.

Russia has followed the initiative of 1858 with extraordinary vigor. The telegraph already connects St. Petersburg with Irkoutsk, a distance of 5,000 miles, and will be extended to the Pacific coast during 1865. The colonization of the valley of the Amoor has been undertaken, and already eighty steam vessels are employed in the trade with the Russian possessions of the North Pacific, while the government of St. Petersburg extends all possible encouragement to the enterprise projected by English and American capitalists to unite the telegraph lines of the United States and British America with the Russo-Siberian line now advancing to a junction across the Behring straits and through Russian America.

#### COMMERCE OF THE SANDWICH ISLANDS.

The Hawaiian islands should not be omitted from the consideration of the great commercial changes which the contact of European and Asiatic civilization is destined to produce. In 1863 the external commerce of the islands had reached an aggregate of \$2,201,345, and its progress is indicated by the following table:

Years.	Domestic produce exported.	For'n merchandise exported.	Total exports.	Total imports.
1846.....	\$301,625	\$62,325	\$363,750	\$598,382
1856.....	466,278	204,546	670,824	1,156,423
1860.....	480,526	326,932	807,459	1,223,749
1861.....	476,872	182,902	659,774	761,109
1862.....	586,542	251,882	838,424	998,239
1863.....	744,413	281,439	1,025,852	1,175,493

The official returns of 1863 are classified as follows by the Honolulu Commercial Advertiser:

	Paying duty.	Bonded.
Imports from United States, Pacific side.....	\$304, 502	\$36, 617
“ “ “ “ Atlantic side.....	122, 770	40, 827

“ “ Great Britain .....	63, 400	9, 227
“ “ Vancouver's island.....	32, 210	2, 277
“ “ Sea .....	6, 291	179, 454
“ “ Islands of Pacific.....	6, 457	5, 468
“ “ Sitka, (Russian America).....		4, 586
	<hr/> 730, 061	<hr/> 341, 308
	<hr/> <hr/>	<hr/> <hr/>

Of articles exported, 3,512 pounds of cotton were sent to the United States, and the exports of sugar increased from 3,000,000 pounds in 1862 to 5,292,000 pounds in 1863.

#### THE GOLD PRODUCT OF THE PACIFIC COAST.

The extension of English and American settlement since 1850, expressed by the foregoing statistics of Australia, California, and British Columbia, is the result of gold discovery. The London Economist estimates the production of gold from the islands and coast of the Pacific during the fifteen years 1849-'63 at £350,000,000 sterling, or equal to 58 per cent. upon the total computed stock of £600,000,000 sterling of gold existing in various forms in Europe and America in 1848, and conjectures that the following numerical distribution of these £350,000,000 has taken place:

Employed and absorbed in Great Britain.....	£60, 000, 000	
“ “ France.....	110, 000, 000	
“ “ United States.....	50, 000, 000	
	<hr/>	£220, 000,000
“ “ Australia .....	30, 000, 000	
“ “ California.....	20, 000, 000	
“ “ Turkey and East....	40, 000, 000	
“ “ Brazil, Egypt, Spain,		
Portugal, &c.....	40, 000, 000	
	<hr/>	130, 000, 000
		<hr/>
		350, 000, 000
		<hr/> <hr/>

The cheapening of the price of quicksilver, and the large discoveries of silver in Nevada and Arizona, have increased the annual supplies of that metal, but only to a small extent compared with gold.

Upon the question, now elaborately discussed, of the effect of this gold production upon its exchangeable value, the London Economist of February 20, 1864, calls attention to the evidence afforded by comparing the average annual rates from 1841 to 1863 of the foreign exchange between England, using a gold standard, and Paris, Hamburg, and Amsterdam, using a silver standard, and according to this statement the fall in the value of gold as compared with silver (the best available test at present) in no case exceeds  $2\frac{1}{2}$  per cent.

The result of this comparison adds, if possible, to the force and significance of the following language by an eminent English writer:\*

\* Tooke, History of Prices, vi, 235, published in 1857.

"Set at work and sustained by the production year by year of large quantities of new gold, there is at work a vast and increasing number of causes all conducing to augment the real wealth and resources of the world—all conducing to stimulate and foster trade, enterprise, discovery, and production—and therefore all conducing with greater and greater force to neutralize, by extensions of the surface to be covered, and by multiplying indefinitely the number and magnitude of the dealings to be carried on, the *a priori* tendency of an increase of metallic money to raise prices by mere force of enlarged volume. Already the boundaries within which capital and enterprise can be applied, with the assurance and knowledge alone compatible with durable success, have been extended over limits which ten or even five years ago would have been regarded as unattainable. There have come into play influences by which it seems to be the special purpose to contribute, by the aid of the gold discoveries and by the aid of the concurrent advance of knowledge, to the removal or mitigation of many chronic evils against which past generations have striven almost in vain."

It has been estimated that the populations of China and India, when the benefit of a strong and stable government is assured, will develop a commerce fully equal to the proportions now witnessed in France. The beginning of such a state of things, attested by the movement thither of the precious metals, is a fruitful topic of discussion, and will be briefly considered.

#### THE DRAIN OF SILVER TO THE EAST.

The absorption of silver in Asia has never been so great as since the gold discoveries of California and Australia. With the increase of bullion Europe ceased to regard with apprehension the oriental demand for silver in exchange for silks, teas, indigo, and other staples of eastern production. When it was known that the Pacific gold stream was yearly increasing in volume, and could readily fill any vacuum which the shipment of silver to India and China might produce, a great expansion of trade to Asia followed. The precious metals came to be regarded as merchandise, and it was deemed wholly unessential whether payment was made for eastern products in the coin or the manufactures of Europe.

The following table of the imports of Indian products into England in a series of years indicates the nature of this increase of trade:\*

#### *Imports from British India—value.*

The steady rise in value to an aggregate of \$60,000,000 in 1857, producing a drain of silver, was one of the causes of the revulsion in that year. Since then the purchases of Indian produce, mostly cotton, have risen to \$90,000,000 in 1862, while in 1863 England imported cotton from India to the enormous value of \$200,000,000.

The quantity of silver annually exported from England and the Mediterranean to Asia has been as follows, per English official reports :

Year.	England.	Mediterranean.	Total.
1851.....	\$8, 362, 500	-----	\$8, 362, 500
1852.....	12, 116, 210	-----	12, 116, 210
1853.....	23, 550, 000	\$4, 240, 000	27, 790, 000
1854.....	15, 555, 000	7, 255, 000	22, 821, 000
1855.....	32, 075, 000	7, 620, 000	39, 695, 000
1856.....	60, 590, 000	9, 950, 000	70, 540, 000
1857.....	86, 477, 170	10, 180, 291	96, 657, 461

France, although the richest country of the world in the precious metals, has since 1848 parted with \$165,947,253 of silver, and taken in exchange gold. This is the case with England, Russia, and the United States, who no longer hesitate to encourage and extend their trade with the non-importing population of Asia, although at the hazard of a drain of silver coin. The trade of California with China is more reciprocal, owing, it is supposed, to the new demands for American provisions and manufactures, which the Chinese immigrants, attracted by the mines to our Pacific coast, carry back with them to China. But in India, notwithstanding a century of British occupation, the apathy of the natives—their aversion to any exchange except for silver—seems unbroken. To this condition of the market ethre has been added, during the last ten years, an investment of £50,000,000 of English capital in the railroads of Hindostan, which has greatly contributed to the influx of silver.\*

\* See the Bankers' Magazine, Journal of the Money Market, and Commercial Digest, January, 1864, London, p. 19.

From the time of imperial Rome bullion has flowed from west to east, and Pliny complained that India was the "sink" of the precious metals. Gibbon has also observed that this continuous drain was "a complaint worthy of the gravity of the senate;" and Humboldt, estimating the produce of the South American mines in the beginning of this century at \$43,000,000, states that \$25,000,000 were sent to Asia. The tendency to hoard the precious metals partakes of the proverbial immobility of the Asiatic character. Silver is less used in India for purposes of luxury and ornament than in Europe; and it is probable that silver, and perhaps gold, will continue to be the leading article of import until the whole Asiatic world, with its population of six hundred millions of souls, shall be in possession of the same money supply relatively which is found in European or American states. This proportion between population and its industry on the one hand, and the medium of commerce recognized by the world, once established, then, and perhaps not before, will the oriental torpidity be succeeded by new and more advanced modes of traffic. The population of Great Britain is computed at 30,000,000, with an amount of gold and silver in circulation assumed to be £80,000,000; and this amount is found essential, notwithstanding the great extension of paper substitutes for coin. The circulating medium of India in 1857 was about £80,000,000, but the population of India is 180,000,000, or sixfold that of Great Britain. India can, therefore, absorb £400,000,000 in addition to the amount she is now supposed to hold before she will exceed the monetary level of Great Britain.

France affords a more impressive illustration of the inevitable absorption of the precious metals by Asia before the monetary equilibrium will be adjusted between the Orient and the Occident. The population of France is, in round numbers, 36,000,000; its specie supply 6,600,000,000 francs, or about £264,000,000. The population of India will therefore require £1,320,000,000 to reach a circulation of coin proportionate to that of France.

But this is not all. It is estimated that there are 600,000,000 Asiatics, fully equal as to industrial capacity to the people of India; many of them—the Japanese and Chinese especially—superior to the Hindostanese. Before the orientals reach the monetary level of England, they must be in possession of £1,600,000,000, while to attain an equality with France no less than an aggregate of £4,400,000,000 must be permanently absorbed by the 600,000,000 Asiatics, who are soon to be brought into close commercial relation with christendom.

The capital and industry of Europe and America were never so active as now. How immeasurable, under the impulse of machinery, is the energy and the amount of production. Fully proportionate is the exigency of distribution and the development of commerce; and as money is the grand instrument both of production and distribution, it must be permitted to diffuse itself proportionately. Until every land is saturated to the full standard of Europe and the United States, there will be no excess of supply from the mines of all the continents. The golden age is here, but we stand only on its threshold.

## OVERLAND TRADE AND COMMUNICATIONS

BETWEEN THE

## PACIFIC COAST AND THE MISSISSIPPI STATES.

Having considered the external commerce of the United States, mostly concentrated on the Atlantic seaboard, and the volume of internal trade between the Mississippi States and the cities and communities east of the Alleghanies, the grand result of nearly three centuries of American civilization, and having also anticipated, from less than twenty years of similar colonization on the Pacific coast, a still more remarkable phenomenon of social and material progress, it remains to consider the situation and prospects of those interior American States which are destined to connect the two great oceans by a railway across the American continent, itself the precursor of other communications of the kind.

The California division of the Union Pacific railroad consists of three sections, under the control of three companies: First, the San Francisco and San José Railroad Company, which has a section of fifty miles between these two places; secondly, the Western Pacific Railroad Company, which has a section of one hundred and fifteen miles from San José to Sacramento; thirdly, the Central Pacific Railroad Company, which has the section from Sacramento to the eastern boundary, in Truckee valley, a distance of one hundred miles. The first section, from San Francisco to San José, is completed and in operation. The further distance to Sacramento is rapidly advancing to completion. With the aid of the California legislature there is a probability that the railway will be pushed to the eastern boundary of the State sooner than the lines west of the Missouri river will be constructed for an equal mileage.

When recently the people of Nevada Territory were represented in a convention to frame a State constitution, there was no dissent from the proposition that the credit of the State to the amount of \$3,000,000 might be applied to aid the construction of a Pacific railway, all other loans of credit for internal improvements being prohibited. This provision will doubtless be inserted in the constitution soon to be presented. Utah, Colorado, and Kansas will also co-operate with efficiency.

But the surest guarantee will be the resources, present and prospective, of the organizations named, which will now be considered in geographical sequence.

## NEVADA.

The population of Nevada Territory by the census of 1860 was 6,857. At the close of 1863 it had reached 60,000, of which nearly 20,000 was concentrated at Virginia City, the centre of the most productive silver district. Within four years \$5,000,000 have been expended in erecting quartz mills and reduction works; another \$5,000,000 have been laid out in opening the mines, and three times as much in various kinds of improvement. In wagon roads alone, leading into and through the Territory, \$500,000 have been spent, an investment that has paid from forty to eighty per cent. per annum. The tolls collected on these roads during the year 1863 reached at least the sum of \$200,000. The money paid on freights coming into the Territory from the Pacific coast amounted to fully \$3,000,000. About 3,000 teams of various kinds are employed in this business, besides numerous pack trains.

The argentiferous lodes of Nevada, first known as the Washoe silver mines, are not confined to the neighborhood of the first discoveries, although none have elsewhere been met with carrying so large a body of rich ores as the original Comstock, at Virginia City. Some claiming to be equally rich, but comparatively small, have been found at other points. The localities of the other principal mines of Nevada, naming them in the order of their discovery, are the Esmeralda mines, a little over one hundred miles south-southeast of Virginia City; the Humboldt, one hundred and sixty miles northeast; the Silver Mountain, sixty miles south; the Peavine District, thirty miles north; and the Reese River Country, one hundred and seventy miles east-northeast, embracing, like the other sections named, many districts, and flanked by two of more than ordinary promise—the Cortez, seventy miles north, and the San Antonio, one hundred miles south of Austin, now the principal town in the Reese River region. Besides these, there are many isolated districts in various parts of the country, all advancing claims to great mineral wealth.

Extensive districts of California, along the course of the Sierra Nevada, are argentiferous. On both the California and Arizona sides of the Colorado river silver lodes of manifest value are met with. In Utah Territory silver-bearing ledges, not unlike those found in the vicinity of Reese river, are numerous, and similar discoveries in the Boise country and other portions of Idaho have been made; but Nevada as yet sustains her pre-eminence as the silver-bearing region of the United States.

There are now more than a hundred quartz mills in operation in the Territory of Nevada. These carry from five to forty stamps each, and have been erected at a cost ranging from \$10,000 to \$100,000, three or four at least having exceeded the latter sum. The Gould and Curry mill, with its surrounding improvements, has already involved an expenditure of \$1,200,000. About three-fourths of these mills are driven by steam, and the balance by water. Of the entire number in the Territory, seven-eighths are in the vicinity of Virginia City, the most remote being not over fifteen miles distant.

It is calculated that every stamper will crush a ton of rock in 24 hours. Supposing 100 mills to be in constant operation, carrying an average of 10 stamps each, 1,000 tons of ore are crushed daily. This ore will yield at the rate of \$50 per ton, giving a daily product of \$50,000 for the Territory, or a total, allowing 300 working days for the year, of \$15,000,000 per annum. With proper allowance for the increased production of 1864, the estimate of \$20,000,000 for the current year will not seem an exaggeration.

The colony of Victoria, in Australia, had a population in 1861 of 540,322, about equal to that of California and Nevada. The total number of persons residing within the mining districts of Victoria is given as 233,501, of which 90,364 are returned as directly employed "in the extraction by washing, crushing or other mode, of gold." Upon this basis the colony of Victoria has undertaken and constructed 351 miles of railway at a cost of £35,000 per mile; while society in the gold-fields, under the necessity of co-operation imposed by quartz mining, has been transformed from the violence of the first epoch of gold discovery to a remarkable condition of order and sobriety. Heavy and expensive machinery employed on works which extend over a period of several years have obliged the miner to adopt a settled mode of life. Attractive homesteads are everywhere seen, and flourishing cities are founded almost in a day. The same results are soon to be observed in Nevada—perhaps are already visible. Virginia City (in the language of the Edinburgh Review, describing the populous towns of Victoria) "contains as many as 20,000 or 30,000 inhabitants, with streets well metalled and paved, lighted with gas, and supplied with water, with churches, three daily newspapers, and other public institutions." The construction of 300 miles of railway will soon be added to the analogy of comparative progress.

## UTAH.

The settlements of Great Salt Lake City, and elsewhere in Utah Territory, have directed their industry exclusively to agriculture and domestic manufactures. Their ecclesiastical rulers, by giving such a direction to the labor of the people, have shown great sagacity, for not only is society organized on surer foundations than in mining districts, but the demand for all the products of Utah has been so constant and remunerative as to furnish an advantageous home market. Simultaneously with the first settlement at Salt Lake the overland emigration to California commenced, and has increased from year to year until in 1863 it meets a return column of adventurers who are pushing eastward and northward to the gold-fields of Colorado, Idaho, and Montana. The consumption by the crowds in transit, both east and west, sustains the prices of provisions and manufactures at rates which encourage population and accumulate wealth.

By the census of 1860 the population of Utah was 40,273, an increase of 253.89 per cent. since 1850. The total valuation of property was \$986,083 in 1850, and \$5,596,118 in 1860, or an increase of 467.50 per cent. If these proportions continue during the present decade, the population of Utah will be 142,525, and the valuation of property \$31,757,966 in 1870.

Most of Utah is barren; perhaps one-fiftieth of the surface, with the aid of irrigation, is available for agriculture; but over other and more extensive districts grazing and wool-growing will reward industry. The native grasses, especially the bunch grass, are heavily seeded, fattening cattle like grain, and giving great consistence and richness to the milk of cows. This concentration of nutriment is a result of the arid climate, and to the same cause may be attributed the health of sheep, and the fine quality of their fleeces.\*

Iron and copper mines, which have been discovered in the Wahsatch mountains of Utah, have received more attention from the Mormons than the indications of gold and silver, but the time is at hand when the precious metals will be mined as successfully as in Nevada.

The present population of Utah is variously stated—by Peter A. Dey, esq., engineer of the Union Pacific Railroad Company, at 75,000; by Fitzhugh Ludlow, esq., in the *Atlantic Monthly Magazine*, at 80,000; and by Hon. J. F. Kinney, delegate from Utah to Congress, at 100,000. They are producing, besides fruits and cereals, wool, cotton, silk, paper, leather, iron, lead, copper and salt, having introduced machinery for manufactures.

---

\* The following paragraph from the San Francisco *Bulletin* relates to the subject:

THE PASTURES OF THE GREAT BASIN.—These are generally found abundant on the elevations and rounded hills from 500 to 5,000 feet above the foot plains and level deserts coming west from the Salt Lake ranges. Hay is made from wild rye and barley, with many other grasses unknown heretofore to our hay-makers, and mostly undescribed in science. In several parts a species of wheat has been met with, and also several varieties of clover have long been used by passing emigrants, since 1846. Brush and shrub pines, and oaks not over one or two yards high, and covered with acorns and nuts, are common in many districts, and make excellent food for stock animals, being also necessary articles of the Papute cuisine; the dwarf oak acorns being particularly nutritious. An American gambusino, who had tramped up and down Arizona and Nevada in 1862-'63, lately stated to a correspondent of the *Bulletin* that the grasses of the eastern slope, or the other pastures with which they are mixed, have the property, when a little advanced in the season, of making the milk of domestic cows much thicker and more like the consistence of warm cream, and very rich in making cheese. It is many times more sustentative than that of the coast, and much more sweet and toothsome, though less in quantity, these being its usual peculiarities at all seasons. A variety of stiff, short grass is found in these places, not over a foot high, which is full of fine seeds and is greedily eaten by cattle and horses, and keeps them in excellent condition.

The late F. W. Lander, in a communication to the Secretary of the Interior, dated February 13, 1858, speaks of the inhabitants of Utah in the following terms: "Having been much exposed in the passes of the central mountains during two protracted explorations, with very small parties of men, and especially the last season, when the Mormons were expecting attacks from the government military forces, I wish, in this connexion, to place on record my own opinion and that of my party in favor of the masses of the Utah population. Often reduced to great straits for provisions and supplies, I was uniformly relieved, and in several instances most kindly and hospitably entertained by that distant class of our fellow-citizens. It cannot be denied that among this peculiar people exists as much thorough push, practical energy and determined movement, as are found in the republic. Both in founding the colonies of Salt Lake and throwing open that arid, desolate section to settlement, they have overcome some of the most remarkable obstacles of nature. In fact, the initiative steps taken by this singular people first gave great impetus to our own overland emigration, by imparting knowledge of the resources of travel, and by furnishing supplies." Again, in a subsequent communication, Colonel Lander remarks: "The existence of this Mormon population, and the supplies they are enabled to furnish, is a most important matter in making estimates for any public work to be carried on in that section of country. They are very excellent laborers, many of them Cornish miners, who understand all sorts of ledge work, masonry, &c. The majority of the lower classes are trained in the use of implements of excavation, from the amount of picking and digging which is required in the building of the great irrigating ditches, and in the erection of the earth and rock fences by which the farms of the country are separated. They will prove of remarkable service should the proposed line of the Pacific railroad pass anywhere in the vicinity of their settlements. Ex-Governor Young told me that he would engage to find laborers and mechanics to build that portion of a Pacific railroad which should extend across the Territory of Utah."

#### COLORADO.

Colorado Territory, with a white population of 34,231 in 1860, and an estimated area of 100,000 square miles, or 66,880,000 acres, has nearly doubled in population during the first three years of the current decade. The population in January, 1864, may be fairly stated at 60,000. The production of gold in 1862 was \$10,000,000, which will probably reach \$15,000,000 during 1864.

A message of honorable John Evans, governor of Colorado, to the Territorial legislature, delivered February 3, 1864, indicates quite distinctly the future situation of the State in regard to agriculture, grazing, and mining. He estimates that not over one-half of the supplies of provisions for the Territory are yet produced from the soil, and anticipates that this relation between supply and demand will be maintained for years to come. He admits that "the arable lands of Colorado, except for purposes of grazing, are limited exactly by the quantity of water that may be found applicable to purposes of irrigation," while claiming that lands are very productive when irrigated. The governor presents the following comparison between the returns of agriculture in Colorado and Illinois:

*Colorado.—1 man's labor—10 acres corn, 15 acres wheat.*

10 acres corn, 40 bushels per acre—400 bushels, at \$3.....	\$1, 200 00
15 acres wheat, 30 bushels per acre—450 bushels, at \$3 .....	1, 350 00
Corn fodder from 10 acres, at \$10 per acre.....	100 00
Wheat straw from 15 acres—20 tons, at \$10.....	200 00
Total.....	<u>2, 850 00</u>

*Illinois.—1 man's labor—30 acres corn, 15 acres wheat.*

30 acres corn, 60 bushels per acre—1,800 bushels, at 30 cents..	\$360 00
15 acres wheat, 15 bushels per acre—225 bushels, at 75 cents..	168 75
Straw and fodder, estimated.....	100 00

Total.....	628 75
------------	--------

Profits in Colorado over those in Illinois on the annual labor of one man.....	\$2,221 25
--	------------

Even more significant than these extraordinary prices of corn and wheat in Colorado is the suggestion by Governor Evans, that one claim of each quartz lode discovered hereafter shall be reserved, by act of Congress, for the purpose of creating a school fund, "as the usual grant of school-lands by the general government *will be comparatively valueless for such a purpose in Colorado.*"

Governor Evans alludes to the progress of quartz mining in the following terms:

"The improvement in the modes of saving gold from the ores of our mines that have been made during the past year have given a new impulse to mining operations. By these new processes, ores that paid \$25 per ton by the old process are readily made to yield \$100 per ton, while many varieties produce much more largely, and this without greatly increasing the expenses."

The improvements here alluded to are chemical as well as mechanical, and are thus described by a writer in the New York Commercial Advertiser:

"The gold in the quartz is associated with iron pyrites; it is held very tenaciously, as if combined itself with the sulphur always present. The old plan, after drawing off the sulphur, was to pulverize very fine and then apply quicksilver, which united with all the gold free, forming a part, which, exposed to heat, lost the quicksilver in vapor, leaving the gold pure. By this process much gold was lost because it adhered to the pyrites and passed off in the tailings. A new process of roasting at a certain heat drives off the sulphur without adding to the cohesion of the pyrites or causing the gold to volatilize. This process increases the product threefold. In other cases, where the ores are finely pulverized, the gold becomes so fine as to float in the air, thus escaping the quicksilver. This difficulty has been met by heating the quicksilver into vapor enclosed in a cylinder, into which the dust penetrates. The vapor thus fixes the floating particles of gold, and the yield has been raised in the proportion of two to five."

On the western slope of the Snowy mountains, in Colorado, extensive silver mines have been discovered. Iron, lead, quicksilver, and coal have also been found in the Territory, and have already attracted capital. With the ratio of increase since 1860, the population of Colorado will be 200,000 in 1870.

The discoveries and development of the Gregory district is the sole basis, hitherto, for the settlement of Colorado. This district extends from Gold Hill to Empire City, about thirty miles along the base of the Snowy range, and is, on the average, about ten miles in width—an area of three hundred square miles of gold-producing mountains, in which a hundred quartz mills are now in operation.

Governor Evans, in his message of July 17, 1862, thus describes the mines and the manner of mining in the Gregory district:

"The veins of quartz are found within an average distance of one hundred feet of each other. They are by the mining laws divided into claims of one hundred feet in extent, making surface enough on quartz lodes in this region alone for over eight hundred thousand claims. These veins are from six inches

to nine feet in thickness, and vary even more in their quality—from those that will not pay at all, to those that produce the richest ore that has been found in any part of the world."

He estimates that ore yielding \$12 per ton pays all expenses, and that the average result of quartz mining in Colorado is \$36 per ton.

Intelligent observers express the conviction that the range of the gold-bearing quartz is not limited to the Gregory district, but is as extensive as the Snowy range itself; and that recent discoveries in the vicinity of the South Park, and along Clear and Boulder creeks and their branches, are but the precursors of developments in the mountain chain that separates the three parks that will, in a very few years, yield a greater amount of treasure than is now furnished by California, building up important points north as well as south of the present centre.

Professor James T. Hodge, geologist of the Union Pacific railroad, reports the existence of iron and coal near Fort Laramie and the Cheyenne Pass—localities north of Colorado. The Black Hills and Medicine Bow mountains contain these minerals, while the Laramie plains, in the vicinity, will be available for agricultural settlement. In the vicinity of Denver City, Colorado, Professor Hodge visited coal-beds which present a thickness of five feet ten inches pure coal, with no mixture of slate, and thus describes its appearance and quality:

"The coal is of a brilliant jet black, and is easily mined in large lumps, which appear to be firm and sound, but are said to crumble after exposure for a few weeks to the air. It contains but little bitumen, burning with little smoke, no unpleasant odor, and a yellow flame. It does not melt or coke, and, however high the draught, produces no clinker. The ashes of most of the beds are usually white and bulky. A welding heat in a forge is obtained with difficulty. Sulphur is observed in it, in small quantity, in the form of exceedingly thin disks of iron pyrites disseminated through the seams. Particles of mineral rosin are much more abundant, scattered through the coal of the size of pin-heads."

Another coal-bed, worked for the supply of the Denver market, is in the hills along South Boulder creek, only two and a half miles from the base of the Rocky mountains. This locality also affords an abundance of iron ores, and has been selected for the establishment of the first blast furnace erected in the Territory, which went into operation in March, 1864. "The principal coal-bed is opened a few rods southeast from the furnace, and has been worked one hundred feet down a slope of about ten degrees from the horizontal toward the east. The bed is twelve feet thick, almost uniform in quality, with no intermixture of slate, and presents a beautiful appearance in the brilliant lustre of the coal. A little sulphur (pyrites) may here be detected in the seams." Two other beds are described, one of them affording coal of a firmer quality than the others.

These specimens of coal were submitted to Professor John Torrey, who, after analysis, describes them as belonging to the class of lignites—not technically a bituminous coal, neither cannel nor an anthracite. "Still, in common parlance, it will be regarded as coal. In calorific power the Rocky mountain coal may be placed between dry wood and bituminous coal, and therefore it is a most valuable fuel. It may be used for the smelting of iron and other ores. For locomotives it could be employed to advantage, with some modification of the fireplace. The ash is so small in quantity, and so light, that most of it would be carried off by the blast of the furnace. The coal burns freely in a small stove, making a hot and clear fire, and leaving no clinkers. The specimens, that were examined had a tendency to break up and crumble after being soaked with water and allowed to dry; hence the necessity of protection from moisture."

The iron ore found at the eastern base of the mountains, near Denver City,

is characterized by Professor Torrey as "lemonite, a compact variety derived from carbonate of iron, and commonly known by the name of brown hematite or brown iron ore." "It is found," continues Professor Hodge, "in irregular deposits, scattered over the summits, ends, and slopes of many of the ridges which border South Boulder creek and Rock creek. These deposits extend to a depth of only one to three feet, and, as they evidently do not form a part of the strata in the hills, it is impossible to make any estimate of the quantity of ore they will afford. One can judge, only from seeing numbers of acres thus covered, that supplies may be obtained for one or more blast furnaces for several years; but extended observations would be necessary before positively asserting that large works could be supported from this source. The ore is found in pieces of all sizes up to masses of half a ton weight, and large quantities of it are so fine that it would have to be collected for the furnace by screening. There is scarcely any intermixture of foreign stony materials in these deposits. The quality of the ore is generally pretty good, though the larger masses are not so fine-grained and pure as the smaller ore. I should judge that an average of three tons would be required to make a ton of iron. The ore is in excellent condition for the blast furnace, its long exposure at the surface having prepared it for smelting almost as thoroughly as if it had been roasted. Its unusual mode of occurrence, unconnected with the strata in the hills, was for some time a source of perplexity; and it seemed necessary to explain it correctly in order to judge better of the probability of the ore being found in large quantities in other places on the range of these formations. On examining the country up to the base of the mountains I discovered what I believe is the true explanation. At the distance of two and a half miles from the mines the marginal ridge, already noticed, rises suddenly with a very steep face and dip of its strata. The surface at its foot is covered with large rounded boulders from the granite rocks of the mountains. Some, also, are of the red sandstones and conglomerates of the outer ridge. They decrease in size and numbers towards the east, indicating the movement in that direction of vast bodies of water or ice. These, together with the evidences of denudation I had observed further north, evidently not referable to the diluvial or drift formation, appeared to me as more strongly marked evidences of glacial action than I had ever before seen. The extension of this over the hills near the furnace must have excavated the soft beds, of which they are in great part composed; and the light clayey materials of the strata containing the iron ores being swept away by currents of water, these, by their weight, were left behind, and are now found spread over the surface of the hills. By long exposure they have been oxidized and converted from the clay iron stone, or 'blue case iron' as it is here called, into the shelly hematite. Such a derivation of the ore, if correct, must itself make the quantity in any locality always uncertain. Found as it is, it is collected and delivered at the furnace at a cost of \$3 per ton, making about \$9 to the ton of iron."

"The furnace, owned by Messrs. Langford, Lee, and Marshall, is a very small stack, of daily capacity of only four or five tons of pig iron. It is twenty feet square at base, twenty-two feet high, and seven feet diameter at the boshes. The hearth is five feet high and eighteen inches diameter. It is intended to work the furnace with cold-blast, and the consumption of charcoal will probably be from two hundred and fifty to three hundred bushels to the ton of iron. The cost of charcoal at the furnace is ten cents per bushel, making the cost of fuel from \$25 to \$30 per ton, while that of ore, as above stated, may be rated at \$9. The cost of the limestone for flux will probably not exceed fifty cents, and the remaining items of labor, repairs, &c., may be estimated at about \$7. The total cost will probably be about \$45 per ton of pig metal. In large establishments the expenses should be less, especially if the raw mineral coal could be substi-

tuted, wholly or in part, for the charcoal. The quantity of fuel, too, would be diminished by the use of the hot-blast."

The prospects of agriculture are thus considered by Professor Hodge: "The agricultural resources of the prairies are somewhat limited by the extreme dryness of the climate. Rain seldom falls, and were it not for the never-failing supplies of water in the numerous streams running from the snowy central range of the Rocky mountains, the country would be an uninhabitable desert. Yet the soil is in great part fertile, warm, and mellow, and abounds in gypsum and salts of soda; which appear upon the surface in the form of an incrustation resembling frost. This is particularly abundant about the edges of dried-up ponds. The alkaline salts affect the waters of many of the wells, rendering them nauseous to the taste and unwholesome, and mixed with the dust of the roads, this is said to be, in the summer season, very injurious to the eyes of travellers. It is remarkable that, notwithstanding the want of rain, no great trouble is experienced over the plains for the want of water at the ranches and stations along the roads. I crossed the Platte river at Fort Kearney in October, over its dry, sandy bed, and yet the wells along the valley contained abundant water, and, in general, they were not twenty feet deep, their bottoms not reaching to the level of the stream. It is difficult to explain from whence these supplies are derived. The dryness of the soil renders irrigation necessary for its successful cultivation, and this is already practiced to a considerable extent in Colorado, after the system of the Mexicans, which consists in the excavation of *acequias* or ditches, often several miles in length, by which the water of the streams, taken out at an upper level, is carried at this elevation past the farming lands, over which it is let out, as occasion requires, by tapping the *acequias* at any desired points. The cultivation is thus limited to lands lying below the level of the *acequias*, and such lands are met with of considerable extent along most of the streams, spreading out to great width, even before these have fairly emerged from the mountains. Very productive and extensive farms thus situated are seen running up among the basaltic hills, or Clear creek, and similar improvements extend all along this stream to its mouth, below Denver. The streams north of it, so far as and including the *Cache à Poudre*, afford the same advantage for cultivation of the soil, and along most of them the lands are occupied in continuous lines of farms. In the newness of the country, which has been occupied only two or three years, the crops are limited to a few of the most necessary articles. Flour being supplied to the Territory from the States and New Mexico, the cultivation of wheat is not so important as of the more bulky articles, which will not pay for transportation from such distances. Some wheat, however, is raised, and the crop is a successful one. But attention is chiefly directed to procuring the large supplies of hay, corn, oats, and vegetables, required by the numerous gold-mining population in the mountains. The hay being made from the wild prairie grass, its supply is limited only by the amount of labor employed in cutting and stacking it; still, owing to an overstock of it the previous year, the quantity put up in 1863 has proved too small for the demands of the country, increased as they are by the extraordinary accumulations of snow, which, covering the plains, cut off the herds of cattle and horses, with which the country is abundantly stocked, from their accustomed support by grazing during the winter. This, together with the obstructed condition of the roads, caused the price of hay in December last to rise to \$105 per ton at the gold mines. Corn, which is a good crop, and may be raised to any extent along the streams, was worth at the same time nine or ten cents per pound. Potatoes are produced in abundance, as also onions, cabbages, and many other vegetables; but in this unpropitious season the prices of all these range high. Onions are raised with scarcely any of the labor attending their cultivation in the States, yet they were from ten to twelve cents a pound. They grow so luxuriantly that a single one often weighs more than a

pound. Such prices cannot be sustained in a favorable season, and particularly when the country is supplied with a more numerous agricultural population.

"It is an important question whether the cultivation of these prairies is always to be limited to those portions capable of being irrigated only by the system now in use. The mountains, it appears, are abundantly provided with water, derived chiefly from the melting of the snows in the great central range. A large part of this, without doubt, penetrates under the stratified rocks, which on both sides dip away from the mountains. These waters probably flow in underground channels far from the mountains, and if tapped by artesian wells sunk down to them, they might reasonably be expected to rise to the surface in never-failing springs. The stratification of the country is certainly remarkably encouraging to such an enterprise; and another inducement to its prosecution would be the discovery of the mineral beds, whatever they may be, beneath the surface. This would be a certain and most economical method of determining the existence or non-existence of beds of coal in localities where it might be especially desirable to obtain this fuel. Artesian wells must at some time be exceedingly useful at Laramie plains, which are not so well watered as the country east of the mountains. These plains, hitherto entirely uncultivated, afford, in places, good pasturage, and a considerable amount of prairie-grass hay, for the use of the overland stage line and of emigrants."

The Laramie plains and the mountain valleys of the Black hills and the Medicine Bow chain are mentioned by Professor Hodge as repositories of iron and coal, and having the constituents of agriculture with the aid of irrigation. These statements were anticipated by Lieutenant (now General) G. K. Warren in his report, as topographical engineer, upon Nebraska Territory, published in 1858-59, (Executive Documents, volume 2, part 2, p. 643,) from which an extract is given:

"In the mountain formations which border the great plains on the west are to be found beautiful flowing streams and small, rich valleys, covered over with fine grass for hay, and susceptible of cultivation by means of irrigation. Fine timber for fuel and lumber, limestone and good stone for building purposes, are here abundant. Gold has been found in places in valuable quantities, and, without doubt, the more common and useful minerals will be discovered when more minute examinations are made. I think it exceedingly desirable that something should be done to encourage settlements in the neighborhood of Fort Laramie. The wealth of that country is not properly valued, and the Indian title not being extinguished, there is no opportunity to settle it. Those who live there now support themselves by trade with the Indians, which being already overdone, it is to their interest to keep others away. If the Indian title were extinguished and the protection of a territorial government extended there so as to be effectual, there would soon spring up a settlement that would rival that of Great Salt lake. The Laramie river is a beautiful stream, with a fine, fertile valley, and there are such everywhere along the base of the mountains. Pine timber of the finest quality in abundance grows there, easy of access, from which the finest lumber can be made. Building-stone of good quality abound. The establishment of the military post and the constant passing of emigrants have driven away the game, so that the Indians do not set a high value on the land, and it could be easily procured from them.

"The people now on the extreme frontiers of Nebraska and Kansas are near the western limit of the fertile portions of the prairie lands, and a desert space separates them from the fertile and desirable region in the western mountains. They are, as it were, on the shore of a sea, up to which population and agriculture may advance, and no further. But this gives them much of the value of places along the Atlantic frontier in view of the future settlements to be formed in the mountains, between which and the present frontier a most valuable trade would exist. The western frontier has always been looking to

the east for a market, but as soon as the wave of emigration has passed over the desert portion of the plains to which the discoverers of gold have already given an impetus that will propel it to the fertile valleys of the Rocky mountains, then will the present frontier of Kansas and Nebraska become the starting point for all the products of the Mississippi valley which the population of the mountains will require. We see the effects of it in the benefits which the western frontier of Missouri has received from the Santa Fe trade, and still more plainly in the impetus given to Leavenworth by the operations of the army of Utah in the interior region. This flow of products has, in the last instance, been only in one direction, but when those mountains become settled, as they eventually must, then there will be a reciprocal trade materially beneficial to both.

"These settlements in the mountains cannot be agricultural to the same extent as those in the Mississippi valley, but must depend greatly upon the raising of stock. The remarkable freedom here from sickness is one of the attractive features of the region, and will, in this respect, go far to reconcile the settler from the Mississippi valley for his loss in the smaller amount of products that can be taken from the soil."

The late General F. W. Lander, while employed in the exploration of the Rocky mountains, (1858,) thus indicated the prospects of grazing in the northern valleys of the mountains, (Executive Documents, 1st session 35th Congress, volume 9, No. 70 :) "From the arable grounds of the Salt Lake valley, through the numerous valleys and timbered regions of the Wahsatch mountains toward the head of Wind river, to the Beaver Head and to the St. Mary's valley of the north, occur available and peculiarly favorable locations for settlements. There are the numerous herding grounds of the Indians and mountaineers, and here are recruited and fattened, in the open air and during winter, the worn-down cattle, mules, and horses bought up by traders from the later overland emigration. The half-breed horses raised by the mountaineers from a cross between the larger animals of the settlements and the Indian pony, reared in the open air and without forage, are some of the finest animals I have ever seen. Durham short-horned cattle, a delicate breed, and not usually thought adapted to exposure, are raised here and wintered without shelter upon the natural grass of the mountains. Hay is never cut by the mountaineers, yet this celebrated stock, fattened upon the bunch-grass, grows larger than any I have seen in the States. John Grant, a well-known trader, who has raised a large stock of Durham milch cows and steers and American horses, winters yearly in the great valleys of the mountains with no shelter but the common Indian lodge of dressed elk or buffalo skin."

#### KANSAS AND NEBRASKA.

The census of 1860 returned the population of the interior districts, which are connected with the overland trade west of the Missouri river, as follows :

New Mexico.....	83,009
Colorado.....	34,277
Utah.....	40,273
	<hr/>
	157,559
	<hr/>

In 1860 a special correspondent of the New York Herald furnished the following statement :

*Table showing the amount of freight forwarded across the plains from the various ports on the Missouri river during the year 1860, with the required outfit.*

Where from.	Pounds.	Men.	Horses.	Mules.	Oxen.	Wagons.
Kansas City.....	16,439,134	7,084	464	6,149	27,920	3,033
Leavenworth.....	5,656,082	1,216	.....	206	10,925	1,003
Atchison.....	6,097,943	1,591	.....	472	13,640	1,280
St. Joseph.....	1,672,000	490	.....	520	3,980	418
Nebraska City.....	5,496,000	896	.....	113	11,118	916
Omaha City.....	713,000	324	377	114	340	272
Grand total.....	36,074,159	11,601	841	7,574	67,950	6,922

In 1863 a population of 60,000 in Nevada employs for the transportation of machinery, merchandise, provisions, &c., from the Pacific coast, a number of men, animals, and wagons fully half as great as the foregoing exhibit of over-land transportation west of Kansas and Nebraska. That this table is inadequate to express the traffic of 1864 may also be inferred from the consideration of the present population of the mountain Territories, viz :

New Mexico, (no increase).....	83,009
Colorado.....	60,000
Utah.....	80,000
Montana.....	12,000
	<hr/> 235,009 <hr/>

It is not an excessive estimate that the present transportation is 50,000,000 pounds, employing 10,000 trains, and at a cost of \$5,000,000 annually. In consequence of the war and other causes, a considerable diversion of the traffic across the plains has taken place in favor of the northern points of departure from the Missouri river; Kansas city by no means leading in the degree indicated in 1860. Whether the traffic will resume its former proportions, depends altogether upon the railway construction of the next twelve months.

Kansas and Nebraska, for an average distance of one hundred and fifty miles west of the Missouri river, are as well adapted to agriculture as the States of Missouri and Iowa, but beyond that limit agriculture is dependent upon irrigation. Hence, as shown by Lieutenant Warren, a steady and remunerative market for breadstuffs and other agricultural products is at the door of the farmer in Kansas and Nebraska, which will divert all his surplus from the Atlantic coast. The foregoing review of the Territories east of the Sierra Nevada of California suggests a permanent deficiency of agricultural production, while their mineral resources will concentrate a large population. Grazing and wool-growing are future interests, which, with domestic manufactures, will diversify industry and occupy labor at no distant stage of progress; but for the next decade of years, manufactures, and even meats, will be largely imported across the Sierra Nevada from the west, and across the plains from the Missouri river.

The spring of 1864 witnesses an exodus of population from the western borders of Missouri and Iowa to the mining districts of Colorado and Montana, which far exceeds that of 1860. Peter A. Dey, esq., engineer of the Union Pacific railroad, writing from Omaha, under date of May 17, 1864, says: "Four thousand wagons and six thousand tons of freight have crossed the Missouri

river at Omaha since April first. There is now a daily movement of two hundred teams, three hundred tons freight, and one thousand persons. The teams are equally divided into those drawn by four horses, and those drawn by five yoke of cattle. No emigration has ever been known to bear any comparison to this. The line of teams waiting ferriage reaches nearly to Council Bluffs, or three miles in length. This rush will undoubtedly continue to the middle of June. The ferry-boat runs night and day. This does not include government transportation."

The statistics of the spring emigration of 1864, on the basis of this statement, are 75,000 men, 22,500 tons of freight, 30,000 horses and mules, and 75,000 cattle. It is probable that similar aggregates represent the emigration from other points on the Missouri river, and in that case 150,000 will be added to the population of the mountains from the Mississippi States during 1864.

#### UNION PACIFIC RAILROAD.

That the overland trade on the average latitude of 40 degrees north has already reached proportions which assure the prosperity of the Central Pacific railway from the way business alone, as soon as constructed, is a probability which can be made to appear from the general railroad statistics of the country.

Take the proportion of mileage to population. In 1860 the population of the States, not including the Territories, was 31,148,047, and the number of miles of railroads in operation was 30,592. The population on the 1st of January, 1861, is estimated at 31,615,267; while on that date official reports show that there were 31,168 miles of railroad constructed in the United States, at an aggregate cost of \$1,777,993,818, or \$37,794 97 per mile. Thus, the proportion of one mile of railroad to every thousand of population seems to be established as a practical law of railroad progress by the American people. This ratio is exceeded in many of the States. For instances: Ohio, in 1860, had a population of 2,339,511, and 2,900 miles of railroad in operation; Illinois, 1,711,951 of population to 2,867 miles of railroad; Massachusetts, 1,231,066 population to 1,272 miles of railroad; while the most advanced southern States were, Virginia, 1,596,318 of population to 1,771 miles of railroad; Tennessee, 1,109,801 to 1,197; Georgia, 1,057,286 to 1,404.

If the Union Pacific railroad, assured by the extent of overland traffic, and aided by the land grant and credit of the general government, should organize measures for the completion of a central trunk line through California, Nevada, Utah, Colorado, and Kansas, by the year 1870, the census of that year would doubtless return populations exceeding the ratio of one thousand per mile. During the decennial period of 1850-'60, the population of those Territories increased five-fold. Connect by railroad the agricultural districts of the Pacific coast and the Mississippi valley with the varied consumption and commerce of the interior mining regions, and the ensuing six years, or the period occupied in effecting that connexion, would probably witness an advance of population three-fold the aggregates which appear in 1864, viz:

	1850.	1860.	1864.	1870.
California .....	92, 597	365, 439	500, 000	1, 500, 000
Nevada .....	.....	6, 857	60, 000	180, 000
Utah .....	11, 380	40, 273	80, 000	240, 000
Colorado .....	.....	34, 271	60, 000	180, 000
Kansas .....	.....	107, 206	120, 000	360, 000
	<u>103, 957</u>	<u>554, 052</u>	<u>820, 000</u>	<u>2, 460, 000</u>

A comparison of the statistics of the English colony of Victoria and the State of California has already been presented, and is instructive. Victoria, in April, 1861, had a total population of 540,322, almost equally divided between the mining districts and the remainder of the colony. Including the Washoe district, now Nevada, California had a population in 1861, nearly equal to Victoria, and which was divided in the same proportion. San Francisco and Melbourne are cities of equal commercial importance. The California revenue for State purposes is \$1,462,690; for national treasury, \$7,128,399; total \$8,591,089, or about \$17 per capita. The provincial revenue of Victoria was, in 1862, \$15,123,465; in 1863, \$13,968,510, or an average per capita of \$29. California has only 75 miles of railroad in operation, while Victoria has 351 miles, constructed at an expense of £35,000 per mile, from which the Victoria government received an income in 1863 of £433,615.\* The first section of the California Central railroad, which was opened in January from San Francisco to San José, a distance of  $49\frac{3}{10}$  miles, was constructed at a cost of \$40,000 per mile. If we suppose the next 600 miles across the Sierra Nevada, and the State of Nevada, to cost \$80,000 per mile, the expenditure will not exceed the cost of the Victoria railroads, which connect the city of Melbourne with the Ballaret and Bendigo gold fields, and with the wool-growing districts of the river Murray.

There is abundant evidence that the mountain valleys are favorable to stock-raising, and that animals and their products will largely contribute to the return business of the Pacific railroad, in addition to the movements of Asiatic merchandise, and of the precious metals. As far north as the sources of the Columbia, the Missouri, and the Saskatchewan rivers, cattle and horses require no winter shelter, but are found in the spring in the best health and condition. For many years the emigrant trains will take to the mountains a multitude of domestic animals. The climate and natural grasses are favorable to their increase, and if the cattle of Texas have been profitably transported to the New York market, it is possible that the Mississippi and Atlantic States may yet receive a considerable portion of their consumption of meats from the Rocky mountains. Wool and dry hides are a considerable export from New Mexico and Colorado; and the San Francisco Mercantile Gazette of March 2, 1864, reports the departure of 1,500 head of beef cattle to the gold mines of Montana, or the sources of the Missouri, which cost but \$6 per head in California. They can be produced in every Rocky mountain district at as low a figure.

The construction of a continental telegraph from the Missouri river to San Francisco, three years since, was regarded as premature; but its successful operation has justified the enterprise. So will it be with the Union Pacific railroad. California alone is better able to carry its construction to the Missouri river than New York was competent, by the resources and credit of the State in 1824, to undertake the Erie canal. As its sections advance westward and eastward, a population will attend fully able to sustain the investment by dividends; nor is it improbable that the perforation of the Rocky mountains and the Sierra Nevada by tunnels will prove the most successful and gigantic traverse of gold and silver lodes ever yet developed in the annals of quartz mining.

#### A SOUTHERN PACIFIC RAILROAD ROUTE.

A route from the Lower Mississippi States to the Gulf of California and San Diego on the Pacific coast, which should be a trunk for communications with Memphis, Vicksburg and New Orleans, is a measure which only awaits the re-

\* The returns for the first quarter of 1864, as reported in the London Times, make it certain that the net profits of the Australian railways will henceforth discharge an interest of six per cent. on the entire cost of construction.

storation of the federal authority in all the gulf States, to be favorably considered by the country.

There are two events which will direct attention to the latitude of  $35^{\circ}$  as a scene of rapid settlement and overland communication. The first is the agricultural advantages of the Neosho district, or the country due west of Arkansas, which was conceded by treaties to the Cherokee, Choctaw, Creek, Chickasaw and Seminole Indians; and in the second place, the new discoveries of mineral wealth in the central and northern districts of Arizona Territory. Neosho, on the east, will soon equal Kansas; while the San Francisco mountains of Arizona, situated geographically south of Nevada, will doubtless be the scene of similar excitement and development as have attended the settlement of the Washoe silver district. It is proposed to compile the latest intelligence of the agricultural region of the east, and the mineral district of the west, under the average latitude of  $35^{\circ}$ .

It was observed in a report presented by the territorial committee of the United States Senate, in 1854, that the country occupied by the Cherokee Indians is as rich and beautiful, as well watered and healthy, as the finest portions of Iowa and Wisconsin, and as lovely in its prairie scenery, as the choicest parts of Texas. It consists of 13,000,000 acres, mostly lying within latitudes  $36^{\circ}$  and  $37^{\circ}$ . One Indian agent represents the staple productions of the people to be corn, wheat and oats; that the country is well adapted to apples, peaches, plums, and similar fruits; that stone-coal, iron, and salt-springs are abundant and profitable; and that the country is admirably adapted for grazing cattle, of which the Indians have extensive stocks. In consequence of the climate, only a portion of the country, resembling the northern part of Alabama, is suited for the cultivation of cotton; tobacco and hemp flourish as in Kentucky.

The Creeks occupy 13,140,000 acres, except a small tract assigned to the Seminoles, on the deep fork of the Arkansas, in latitude  $97^{\circ}$ . The Creek country lies immediately west of Fort Gibson, extending from the Canadian river to the 36th parallel of latitude. It is noticed by James Logan, who was an Indian agent in 1847, as "a country of abundant extent, well timbered and watered, of fertile soil, and of comparative healthfulness, offering every facility for the raising of stock." The scene of Washington Irving's "Tour of the Prairies" is comprised in the Creek district.

The Choctaw country, of which the western half has been assigned to the Chickasaws and some smaller bands of Indians, extends from the Red river to the Canadian, and from the western boundary of Arkansas to the 100th meridian of longitude. Between longitude 94 and 97 degrees, or the Choctaw territory, as reduced in 1854, cotton has been grown near Red river, but corn and wheat are the prominent crops. An Indian agent wrote in 1851: "The soil produces the finest of wheat, weighing sixty-five to seventy pounds to the bushel; as a grazing community it is likewise unsurpassed, the extensive prairies, clothed with luxuriant grass, being capable of sustaining innumerable flocks and herds throughout the year." In 1854, Mr. A. J. Smith, Chickasaw agent, described some medicinal or "oil" springs on the Washita river, as very efficacious. Coal, copper and salt are found in ample quantities.

In the "Exploration of the Red River of Louisiana in 1852," by Captain (now Brigadier General) R. B. Marcy, the Chickasaw district, between longitude  $97^{\circ}$  and  $100^{\circ}$ , is described as about one hundred and eighty miles in length, and fifty in width, containing 9,000 square miles of valuable and productive lands, or 1,000 square miles more than the State of Massachusetts. Various portions of this country are more specifically described. Captain Marcy speaks of "charming landscapes; of soil remarkable for fertility; vegetation in old Indian cornfields twelve feet high; of beautiful springs and streams; of natural meadows covered with luxuriant grasses; broad and level bottom lands, covered with dense crops of wild rice, and of excellent timber, large and abundant." He

adds: "Indeed, I have never visited any country that, in my opinion, possessed greater natural local advantages for agriculture than this."

There is no reason for doubt that the valleys of the Red River of the South, the Arkansas and the Canadian, for a distance of four hundred miles west of the State of Arkansas, are fertile, well watered and timbered, and supplied with coal and iron—comparing favorably with Kentucky and Tennessee in these respects. The colonization of this district will no longer be postponed, but will follow the termination of the war, and a reasonable adjustment of the interests of its Indian occupants.

Ten degrees of longitude west of the Neosho district, in the northern portions of the Territory of Arizona, recent discoveries of gold have occurred, which are attracting population and capital from San Francisco and southern California. This gold district is near the line of the 34th parallel of latitude, and west of the 110th degree of longitude, and is approached from the Gulf of California by steamboat navigation on the Colorado. The San Francisco mountains on the route of Captain A. W. Whipple's Pacific railroad survey are its central landmark. The Colorado river is navigable for a distance of 500 miles to latitude  $36^{\circ} 06'$ , or to the mouth of the Rio Virgen, by a class of stern-wheel steamers, described as follows by Lieut. J. C. Ives, topographical engineer: "100 feet long, 22 feet beam, built full, and with a perfectly flat bottom, having a large boiler and powerful high-pressure engine, and drawing, when light, but twelve inches." The miners of Northern Arizona will be supplied from the Pacific coast by this navigation.\*

The silver mines of southern Arizona, in the valley of the Gila, have been well known for several years. They are not less rich, and will be as productive as those of Nevada.

With peace restored, Indian hostility suppressed, and individual title to mineral lands assured, Neosho, (as the country west of Arkansas has been called,) western Texas, New Mexico, and Arizona, may be expected to follow the central cordon of States in the increase of population and wealth; and if so, and whenever so, a great central highway of commercial communication will be opened. When that period of development shall arrive, the Union Pacific railroad, like the Union Pacific telegraph, will have vindicated all the intervention by the national government in its behalf, and a great impulse will be given to the construction of a more southern line.

When, in 1853, the initiative of Pacific railroad exploration was presented to the United States Senate, resulting in a congressional appropriation of \$150,000 for the purpose, attention was directed to three routes—the northern, the central, and the southern. Legislation has followed in behalf of one—the central—not so much from any demonstration of greater feasibility, but because the mineral discoveries of the interior, followed by population, suggested the selection. The same causes are now active on the two other routes. Discoveries, not only of gold and silver, but of coal, iron, lead, and salt, diversify the map of the Rocky mountain region everywhere within our boundaries; and an emigration from the Pacific coast meets the Atlantic column even upon the great plains, which are drained by the Missouri, the Platte, and the Rio Grande.

The necessity of more than one route between the Mississippi States and the Pacific coast will appear from an enumeration of the railroad lines which are indispensable to the commerce between the Atlantic and interior States. These

---

\* A San Francisco paper says, under date of March 2, 1864: "The discovery of valuable ledges of gold and silver ore is now reported in such numbers, of such richness, and so well authenticated, that if any doubt has existed in regard to the vast mineral wealth of Arizona, it must soon be dissipated. One of the great drawbacks to the prospects of that region for mining enterprises has been the scarcity of fuel; but late advices announce the discovery of coal near La Paz, on the Colorado."

are seven well-defined thoroughfares: (1) From Portland, by the Grand Trunk, to Detroit, and thence, with a traverse of the State and Lake of Michigan, to Milwaukee and La Crosse; (2) by the New York Central, the Great Western, of Canada, and the Chicago and Northwestern railroad, to Prairie du Chien; (3) by the New York and Erie, the lines of Ohio and Indiana south of the great lakes, and the Illinois Central, to Galena; (4) the Pennsylvania Central, and its western connexions, to Rock Island; (5) the Baltimore and Ohio, by way of Cincinnati, to St. Louis; (6) from Richmond, through the Cumberland valley, to Memphis; and (7) from Charleston and Savannah, traversing the States of Georgia, Alabama, and Mississippi, to Vicksburg and New Orleans. All these highways are thronged and prosperous, and, with the wonderful impulse to colonization and commerce induced by mining investments, a period of twenty-five years will probably witness the completion of four great continental communications within the limits of the north temperate zone, and upon the following lines:

1. Through the southern tier of States, on or near the parallel of  $35^{\circ}$ , which is central to the region of cotton, the sugar cane, and the vine, and which will be supported by the populations of Louisiana, Arkansas, Neosho, (or the Territory occupied by the Cherokee and Choctaw Indians,) Texas, New Mexico, Arizona, Sonora, and southern California. This may be called the Gulf route, from its relation to the Gulfs of Mexico and California.

2. The central, which is now in course of construction, on the average latitude of  $40^{\circ}$ . With its present prestige and aid from the federal government, soon to be increased by the intervention of State governments in its behalf, the speedy construction of this road may be anticipated. If in operation at the present moment, the road would be financially successful. All the resources of Kansas, Nebraska, Colorado, Utah, Nevada, and, in a great degree, of Missouri and California, are pledged to such a result.

3. The lake route, hitherto designated in congressional debates as the Northern Pacific route, connecting the western coast of the great lakes, and the navigable channel of the Columbia river, by the most direct and feasible communication with which the Territories and future States of Dakota, Montana, Idaho, and Washington, as well as the States of Minnesota and Oregon, are identified.

4. The international route, or an extension of the Canadian railway system across the Peninsula of Michigan, and through Wisconsin and Minnesota, to the English colony of Selkirk in latitude  $50^{\circ}$ , and thence, through the valleys of the Saskatchewan and upper Frazer rivers, to the Pacific coast in latitude  $54^{\circ}$ .

The prediction is hazarded that the year 1890 will witness the consummation of the 8,000 miles of interior railroad above indicated. A more accurate statement would be, that whenever, along either of these routes, a population shall be assembled of two millions of souls, then will follow, by an irresistible social law, the construction and support of two thousand miles of railroad. The probability of that aggregate of population by the year 1870 has been considered on the central line. The situation of the more southern communication has been also referred to, and some space will now be given to the probabilities that, by the year 1890, the great lakes will be connected by railroad with the Columbia river and Puget's sound, while 1880 is likely to witness the completion of the international railroad upon the average latitude of  $52^{\circ}$  north.

#### THE NORTHERN OR LAKE ROUTE.

The latitude of  $45^{\circ}$  north, extended west of Minnesota, is not only central to the lake coast and the railroads of northern Illinois and Iowa, Wisconsin and Minnesota, but in its traverse of the Great Plains and the Rocky mountains it is most accessible from the mining districts now developed, or soon to be occupied, in the Territories of Dakota, Montana and Idaho. Other conditions being favor-

able, the future emigrant route will follow the parallel of  $45^{\circ}$  or  $46^{\circ}$ , and when population warrants, that will be the general direction of the northern or lake railroad route.

Explorations by officers of the general government, and publications of their reports, have made the general features of this route quite familiar. Fully nine-tenths of the area between the 100th meridian of longitude and the Cascade range of Oregon will never be available for agriculture, although districts far more extensive will support herds and flocks. The climate, owing to the reduced altitude, is not more severe than in the corresponding districts of Colorado and Utah. The Great Plains are characterized geologically by a development of the cretaceous formation, which is observed over large Asiatic areas, and concurring with aridity, constitutes the American desert. Population would have been slowly attracted to those localities, except for the discovery of gold. The "northern mines," as they are termed, upon the sources of the Columbia and Missouri, were discovered not more than two years since, and now have a population of 30,000, of which 12,000 are east of the mountains. In addition to the Salmon river mines of Idaho, and the Missouri and Yellowstone mines of Montana, under the average longitude of  $108^{\circ}$ , it is now well ascertained that the Black hills of Dakota Territory, situated on the 44th parallel of latitude, and between the 103d and 105th meridians of longitude, are rich in gold and silver, as well as coal, iron, copper, and pine forests. With the pacification of the Sioux nation, and the establishment of emigrant roads, Dakota will be the scene of great mining excitement, as the gold field of the Black hills is within two hundred miles of the steamboat navigation of the Missouri river, at the intersection of its channel with the forty-fifth parallel of latitude. Admitting the general sterility of the Great Plains, and the physical difficulties of the mountains, yet the great productiveness of the northern mines warrants the opinion that the Territories of Idaho, Montana and Dakota will advance in population in a ratio fully equal to that observed in Nevada and Colorado since their first settlement. The discoveries at Washoe and Pike's Peak date from 1859. Five years is the whole period of the settlement and progress of Nevada and Colorado, and within that period each Territory has reached a permanent population of 60,000. Both have been subject to the mutations of a mining population, but each has increased at the rate of twelve thousand souls per annum. So with the Salmon river district, twenty months of productive gold-mining having assembled 20,000 people, while east Idaho, or Montana, at the expiration of twelve months from the first discovery of gold on the Jefferson fork of the Missouri, had a population of 12,000. If such a rate of accretion is accepted, the result in the year 1890 will be indicated as follows:

	1863.	1870.	1880.	1890.
Idaho.....	20, 000	104, 000	224, 000	344, 000
Montana.....	12, 000	96, 000	216, 000	336, 000
Dakota.....	10, 000	94, 000	214, 000	334, 000
	<u>42, 000</u>	<u>294, 000</u>	<u>654, 000</u>	<u>1, 009, 000</u>

An estimate of the increase of population in Oregon and Washington is annexed. Oregon in 1850 had a population of 13,294, which was increased in 1860 to 52,465, or a ratio of increase of 294.65. Assuming a ratio of increase from 1860 to 1870 of 200 per cent.; for the decade closing with 1880, of 100 per cent., and of 50 per cent. from 1880 to 1890, the population of Oregon during and at the expiration of twenty-seven years will be as follows:

1860.....	52, 465
1870.....	157, 395
1880.....	314, 490
1890.....	472, 185

The population of Washington is estimated on the hypothesis that the ratio of increase during the first decade will be 300 per cent., (or about the same as that of Oregon from 1850 to 1860;) then 200 per cent. for ten years closing with 1880, and 100 per cent. for the decade of 1890, as follows:

1860 (by census).....	11, 168
1870 (assumed).....	44, 672
1880 ".....	134, 016
1890.....	268, 032

The ratio of increase registered as to Michigan and Wisconsin, from 1830 to 1860, far exceeds these estimates.

	1830.	1840.	1850.	1860.
Michigan.....	31, 639	211, 560	397, 654	749, 113
Wisconsin.....	.....	30, 945	305, 391	775, 881

An American railroad from the west border of Minnesota to the Columbia river may be anticipated by the year 1890, on the following basis of population, ascertained as above:

Dakota.....	334, 000
Montana.....	336, 000
Idaho.....	344, 000
Oregon.....	472, 185
Washington.....	268, 032
	1, 754, 217

#### THE INTERNATIONAL ROUTE.

Public sentiment in Canada and England has long demanded measures for the colonization of Central British America, as that fertile belt of territory is now called, which extends from Canada and Lake Superior to the Rocky mountains. It includes the valleys of the Red River of the North and the Saskatchewan river, which belong to the hydrographical system of Hudson's bay, and are covered by the charter of the Hudson Bay Company.

Selkirk settlement, on the Red River of the North, was founded in 1812, and has a population of 10,000—an industrious, moral, and well-ordered community. Fort Garry, in this settlement, is the North American headquarters of the Hudson Bay Company. The posts of this company, more than fifty in number, occupy very commanding situations over the immense area, bounded by Hudson's bay and Lake Superior on the east, the Rocky mountains on the west, and the Arctic ocean on the north. The fur trade of this immense territory concentrates its annual product on the Red River of the North, at Fort Garry, from which point, by the annual voyages of brigades of batteaux, merchandise and supplies are distributed to the most distant post. Prior to 1858, the imports and exports of the Hudson Bay Company were principally transported by the difficult and dangerous route of Hudson's bay and Nelson's river, or over the numerous obstacles intervening from Lake Superior to Red river, on the British side of the international line. In 1858, however, materials were transported

from the navigable waters of the Mississippi river to construct a steamer on the Red river, and in 1862 two such vessels navigated that stream. The trade previously existing between St. Paul and Selkirk has been greatly increased in consequence. The imports of Central British America for the use of the Hudson Bay Company and the Selkirk settlers amount to \$500,000 annually, while the average annual exports, almost exclusively furs, amount to \$1,000,000.

It is now well known that, northwest of Minnesota, the country reaching from the Selkirk settlement to the Rocky mountains, and from latitude  $49^{\circ}$  to  $53^{\circ}$  on the longitude of  $94^{\circ}$ , and to latitude  $53^{\circ}$  on the Pacific coast, is as favorable to grain and animal production as any of the northern States; that the mean temperature for spring, summer and autumn observed on the 42d and 43d parallels, in New York, Michigan and Wisconsin, has been accurately traced through Fort Snelling and the valley of the Saskatchewan to latitude  $55^{\circ}$  on the Pacific coast, and that from the northwest boundary of Minnesota this whole district of British America is threaded in all directions by the navigable water-lines which converge to Lake Winnipeg.

These facts, however favorable to agricultural settlement, would have failed to revolutionize the policy of the Hudson Bay Company, except for the violent excitement of gold discovery. The year 1858 directed a column of adventurers to the channel and sources of Frazer river: the organization of British Columbia followed, and it was soon ascertained that the richest and most extensive gold fields of northwest British America—the Cariboo mines—are so far within the Rocky mountains, so far up to the utmost sources of Frazer river, as to be practicably more accessible from Selkirk than from the coast of Puget's sound. At length, in 1862, the tributaries of the Saskatchewan and Peace rivers, on the eastern flank of the Rocky mountains, were discovered to be auriferous; while eastward stretched, towards Canada and Lake Superior, not less than 100,000,000 acres of fertile lands destined to cereal cultivation, whenever reached by emigration. English and Canadian exploration also established, in favor of this district, that its average elevation above the sea was far less than in American territory; that the Rocky mountains were diminished in width, while the passes were not difficult; that the supply of rain was more abundant, and the carboniferous and silurian formations were of greater extent than further south; and, owing to the greater influence of the Pacific winds through the mountain gorges and the reduced altitude, that the climate was no material obstacle to civilized occupation.

The Hudson Bay Company, in 1863, was reorganized to meet the exigencies of imperial and provincial policy in Central British America, "in accordance (to quote the circular of the new directory) with the industrial spirit of the age, and the rapid advancement which colonization has made in the countries adjacent to the Hudson's Bay territories."

While the present most effective organization of the fur trade will be continued and even extended, the company now proposes to avail itself of all possible agencies for the rapid colonization of the Saskatchewan basin and the gold districts at the sources of the Columbia, Frazer, Saskatchewan and Peace rivers. A telegraph line from St. Paul to Pembina, and thence through Selkirk and the Rocky mountains to the Pacific coast, is first announced as the special enterprise of 1864. Then a connexion of the Selkirk settlement by railroad with St. Paul, and by a direct emigrant road with Fort William, on the British coast of Lake Superior, will receive effective aid, concurrently with the prosecution of American and Canadian enterprises. Steamboat navigation is to be extended upon Lake Winnipeg and the Saskatchewan river. The systems of land survey and gratuitous allotments of land to colonists which prevail in the United States are proposed, the company reserving alternate blocks or sections to support future railroad construction, since, at the earliest practicable moment, a railroad will be undertaken traversing the colonies of Central British America

and British Columbia. It is in the power of the modernized Hudson Bay Company, and it is its well-defined purpose, to connect Lake Superior and the Pacific coast by a cordon of settlements, and to carry forward the construction of two thousand miles of railroad simultaneously with the advent of population, and as the sure means to encourage the settlement of Northwest British America, or the interval which separates the lake coast of Canada from the coast of the North Pacific ocean.

This international railroad (as it may properly be called, until the development of British America warrants a direct communication with Canada) will be the favorite object of English capitalists on this continent, as the Union Pacific railroad will combine in its behalf the energies of the government and citizens of the United States. These two enterprises will therefore precede the construction of railroads on the gulf and lake routes, but only by a decade of years. All four routes will be demanded by the wants of 8,000,000 of people, which the next twenty-five years will witness permanently seated on the average latitudes of 35°, 40°, 45° and 50°, between longitude 95° and the Pacific ocean.

#### STATISTICAL MAP.

To illustrate the communications, present and future, between the Atlantic, Mississippi, Interior and Pacific States, a map is annexed, which has been prepared for publication in this connexion, and which also indicates the boundaries of the Territories at the close of the congressional session of 1863-'4. The statements of population are from the census of 1860, except the estimates for later dates. The map has been extended beyond the northern frontier of the United States, that the arable districts of British America, as shown by their respective northern boundary lines, may be studied with reference to the railway and commercial movements on the continent.

## THE MINERAL WEALTH OF LAKE SUPERIOR.

---

The whole basin of Lake Superior indicates the presence of iron and copper. The mountains which divide the waters of Lake Michigan to the southeast, of the Mississippi river and its tributaries to the southwest and west, of the Rainy Lake river to the northwest, and of Hudson's bay to the north and northeast—the outer rim of the Superior basin—are found, wherever explored, to contain iron ore. The mines at Marquette, Michigan, have been successfully worked, in consequence of the construction of a railroad from the harbor of Marquette to the Iron mountain, eighteen miles distant; but iron deposits in the same mineral range are situated at no greater distance south of Bayfield and Superior, in Wisconsin, and thence have been traced around the north shore of the lake, in Minnesota and in Canada.

Nearer the lake coast, and apparently a lower formation, are the copper districts. The only locality on the southern shore which has attracted attention is a district extending from Keweenaw Point to the Montreal river, 100 miles in length by four to twenty miles in width. On the north shore of the lake, in Minnesota, near the western extremity of the lake, and in Canada for a distance of 200 miles northwest from the Sault St. Marie, are well-defined copper regions which are now attracting the attention of capitalists, and will probably prove as productive as the Keweenaw, Portage Lake, Ontonagon, and Carp Lake districts, as the subdivisions of the Michigan copper-bearing territory are termed.

During the year 1863 discoveries were made in the vicinity of Marquette, which suggest that Michigan is destined to become, at an early day, a great silver-yielding State.\* The newly-discovered district is known as the granite range, lying between the schistose or iron range and Lake Superior, and is from ten to twenty miles in breadth and about fifty miles in length. Lodes of argentiferous galena have been found in this region, yielding from ten to thirty pounds of silver to the ton of metal. Assays made on some of the ores have discovered gold in them to the value of \$60 to \$240. If these statements are confirmed, the silver district of Lake Superior will exceed in value either of the ranges now yielding copper and iron.

Under the impulse of the present demand for iron and copper, the Minnesota district, extending from Fond-du-Lac to the Grand Portage at the mouth of Pigeon river, has been thoroughly explored with satisfactory results; while Canada has taken effective measures for the encouragement of mining enterprises on the remainder of the northern shore. Title to mineral lands on Lake Superior can now be acquired from Canada at one dollar per acre, subject to a tax of one dollar per ton of ore. This order will have the effect to transfer English capital to the Nepigon, Pic and Michipicoton districts of Lake Superior, as it is now admitted that the copper mines of Great Britain have lately failed of their former productiveness. A correspondent of the London Mining Journal states that "the very rich mines of Cornwall and Devon are limited in the

present day, and that some thirty or forty of the greatest and richest mines in those countries are exhausted, at least for copper." There were, in March, 1864, more than fifty bills before the Canadian Parliament to incorporate companies for mining gold, silver, lead, antimony, iron, and copper.

Similar and greater activity prevails in all the American districts of Lake Superior. The total amount of capital invested in the fee-simple and development of the copper mines now worked in Michigan, not including the value of the metal produced, is estimated at \$6,000,000, while their stocks are worth over, \$15,000,000. The aggregate amount of copper produced in 1863 was not less than 9,000 tons of stamp work, barrel and mass, or about 7,500 tons of ingot, worth at its present value over \$6,000,000; but as the largest portion was probably sold at an average of 35 cents per pound, the aggregate receipts of sales will not be much over \$5,000,000. The products of the Marquette iron mines for 1863 are reported as 185,000 gross tons of ore, and 13,732 gross tons of pig iron. In 1855 the product of the same mines was only 1,447 tons of iron ore, with no production of pig iron; in 1858, 31,035 tons of iron ore and 1,627 tons of pig iron.

The exports, of all values, for 1863, from Lake Superior, will amount to \$10,000,000, imports \$12,000,000, consisting, in addition to provisions and merchandise for the mining villages, of shipments of machinery and other materials for permanent improvements.

---

\* In the same vicinity, the Huron mountains are reported to be gold-bearing, and at the latest date (June 13, 1864) there is a probability that the discoveries and production of gold in this district of the Lake Superior basin will fully equal the facts in regard to silver.
